Contents

Preface

Opening Session

M.W.A. Verstegen and S. Tamminga.
Opening address. Second International Workshop on 'Antinutritional Factors in Legume Seeds'.
J. Huisman.
Words of welcome

Session I. 'Analytical methods'

Proteinaceous ANFs

J. Gueguen, M.G. van Oort, L. Quillien and M. Hessing.
The composition, biochemical characteristics and analysis of proteinaceous antinutritional factors in legume seeds. A review.

Standardisation of the extraction procedure for the analysis of trypsin inhibitors in pea seeds.

T. Gaborit, L. Quillien and J. Gueguen.
Determination of trypsin inhibitor activity in seeds by a microtitre plate method.

Effect of different feed ingredients on the analysis of the trypsin inhibitor activity (TIA) in feed.

An improved assay procedure for the determination of chymotrypsin inhibitor activity in legume seeds.

G. van Duijn, F. Heijstek and M.G. van Oort.
The use of monoclonal antibodies for quantification of trypsin inhibitors.

M. Hessing, R. van de Hoef, M. van Biert, R.A.A. Vlooswijk, M.G. van Oort and R. Hamer.
Antigenicity and cross reactivity of legume proteins.

E. Ferrasson, L. Quillien and J. Gueguen.
Purification and characterization of trypsin inhibitors from pea seeds.

J.A. Martinez, A. Fernández-Quintela, M.T. Macarulla and R. Marcos.
Antinutritional factors (ANFs) in legumes and protein concentrates from legumes.

B. Lucas and A. Sotelo.
A useful modification of the haemagglutination method for the screening of lectins in legume seeds.

H. Frøkiaer, L. Horlyck, H. Sørensen and S. Sørensen.
Immunoochemical characterization of inhibitors in pea and measurement of their inactivation by heat treatment.
Tannins

L.G. Butler and K.D. Bos.
Analysis and characterization of tannins in faba beans, cereals and other seeds. A literature review. 81

A. Troszynska, J. Honke and H. Kozlowska.
Polyphenolic compounds in faba bean (Vicia faba L.) seed coat. 91

H.S. Saini.
Distribution of tannins, vicine and convicine activity in legume seeds. 95

G. Sinnaeve, P. Dardenne and R. Biston.
Prediction of antinutritional factors in pea by Near Infrared Reflectance Spectroscopy (NIRS). 101

A. Carmona, A.I. Laurentr'in and G. Borges.
Extraction and assay of legume seed tannins. Effect of temperature on polyphenol yield. 107

R.G. Black.
Use of objective colour measurement of field pea seeds to classify low or high tannin varieties. 113

L. Telek and P.N. Miklas.
Estimation of condensed tannins in faba bean (Vicia Faba L.). 117

Chromatography and characterization of tannins from faba beans. 121

Alkaloids

I.N. Papadoyannis and D. von Baer.
Analytical techniques used for alkaloid analysis in legume seeds. 131

The saponin content and composition of sweet lupin seed. 147

R.V. Sudershan and R.V. Bhat.
Toxic legumes as adulterants in food legumes. 151

Session II. 'Mode of action and negative effects in animal species'

Trypsin inhibitors

M.P. Le Guen and Y. Birk.
Protein protease inhibitors from legume seeds: nutritional effects, mode of action and structure-function relationship. 157

R. Cousin, D. Tomé and T. Gaborit.
The genetic variation in trypsin inhibitor activity among varieites of pea (Pisum sativum L.). 173

H. Hagemeister and C.A. Barth.
The influence of soybean trypsin inhibitor(s) on absorption of exogenous and loss of endogenous protein. 179

Resistance of trypsin inhibitors to fermentation by rumen microflora. 183

Effects of the synthetic trypsin inhibitor camostate and cholecystokinin on exocrine pancreatic carcinogenesis in hamsters. 187
H. Schulze, J. Huisman, M.W.A. Verstegen and P. van Leeuwen.
Physiological effects of isolated soya trypsin inhibitors (sTI) on pigs.

Nutritional effects of isolated soya trypsin inhibitor (sTI) on pigs.

J.K.P. Weder and R. Kahleyss.
Differences in mode of action of lentil proteinase inhibitors against human and bovine chymotrypsin and trypsin.

Nutritional value of soya concentrates in veal calf diets differing in trypsin inhibitor activity.

P. Yuste, A. Brenes and M. Castaño.
Histological alterations to the pancreas and the intestinal tract produced by raw peas (Pisum sativum) diet in growing chicks.

Lectins

G. Grant and E. van Driessche.
Legume lectins: physiochemical and nutritional properties.

A. Gómez-Sotillo, A. Carmona and D.S. Seidl.
Fractionation of Canavalia ensiformis proteins. Distribution of the proteic antinutritional factors.

A. Levy-Benshimol, C. Melito and A. Carmona.
Effect of red kidney bean lectin (RKBL) on in vitro intestinal carbohydrate transactions.

Legume lectins as metabolic signals for the enterocyte-like Caco-2 cells.

Antigenicity

J.P. Lallès, H. Salmon, N.P.M. Bakker and G.H. Tolman.
Effects of dietary antigens on health, performance and immune system of calves and piglets.

Effect of antigenic soyabean on gut tissues in early weaned piglets.

Skin responses and intestinal motility disturbances in preruminant calves fed antigenic soyabean protein.

Antigenic activity of some soyabean products used in veal calf feeding: comparison between in vitro tests (ELISA polyclonal vs monoclonal) and with in vivo data.

Digestion of soyabean and lupin proteins in preruminant calves.

H. Gruppen, J. de Groot and M.G. van Oort.
Identification and partial isolation of an antigenic protein in Pisum Sativum cv. Solara.
Tannins

A.J.M. Jansman and M. Longstaff.
Nutritional effects of tannins and vicine/convicine in legume seeds. 301

B. Pastuszewska, A. Ochtabiriska and W. Grala.
Nutritional value of protein of field bean with different tannin content. 317

W. Grala, A.J.M. Jansman, P. van Leeuwen, G.J.M. van Kempen and
M.W.A. Verstegen.
Nutritional value of field beans (Vicia Faba L.) fed to young pigs. 321

L. Buraczewska, J. Wasilewko and S. Buraczewski.
Chemical and nutritional characteristics of the newest varieties of field
bean grown in Poland. 327

Tannin induced changes in the cellular metabolism of differentiated Caco-2
cells: differences between white and coloured-flowered genotypes of faba
beans (Vicia faba L.). 331

Effect of condensed tannins in hulls of faba beans (Vicia faba L.) on some
morphological and functional parameters of the small intestinal mucosa of
piglets. 335

Alkaloids

G.D. Hill and B. Pastuszewska.
Lupin alkaloids and their role in animal nutrition. 343

Utilisation of bitter lupins by laying hens. 363

G.J.M. van Kempen, G.M. Beelen and A.W.A.H. Kuypers.
Alkaloid toxicity of Datura ferox seeds in pigs. 367

L. Buraczewska, B. Pastuszewska, S. Smulikowska and J. Wasilewko.
Response of pigs, rats and chickens to dietary level of alkaloids of different
lupin species. 371

Session III 'Reduction of ANFs'

Plant Breeding

D.A. Bond and G. Duc.
Plant breeding as a means of reducing antinutritional factors in grain
legumes. 379

G. Ramsay and D.W. Griffiths.
The genetics of vicine and convicine synthesis in faba beans. 397

C. Domoney, T. Welham and C. Sidebottom.
Genetic variation and heterogeneity in pea trypsin inhibitors. 401

D.W. Griffiths and G. Ramsay.
The vicine and convicine content of faba bean (Vicia faba) plants from
flowering to seed maturity. 407

Variability of trypsin inhibitor activity of peas (Pisum sativum) grown in
France. 411

VIII
Process Technology

J-P. Melcion and A.F.B. van der Poel.
Process technology and antinutritional factors: principles, adequacy and process optimization. 419

G.P. Savage and D.R. Thompson.
Effect of processing on the trypsin inhibitor content and nutritive value of chickpeas (Cicer arietinum). 435

R.O. Myer and J.A. Froseth.
Evaluation of two methods of heat processing for improving the nutritional value of peas for swine. 441

A. Visser and G.H. Tolman.
The influence of various processing conditions on the level of antinutritional factors in soya protein products and their nutritional value for young calves. 447

J. Petres, I. Gajzagó and B. Czukor.
Trypsin inhibitors in extruded and high frequency heated soybeans. 455

G.J.P. Marsman, H. Gruppen and A.F.B. van der Poel.
Effect of extrusion on the in vitro digestibility of toasted and untoasted soybean meal. 461

Effect of processing on some antinutritive factors of faba beans: Influence on protein digestibility and food intake in rats. 467

A.J. Vooijs, H. Beumer and A.F.B. van der Poel.
Evaluation of heat treatments to improve the protein digestibility of Phaseolus vulgaris beans in pigs. 473

Differential Scanning Calorimetry (DSC) as a screening method for treated and untreated legume seeds and for pre-screening and monitoring methods for elimination of ANFs. 477

J.K.P. Weder and I. Link.
Effect of treatments on legume inhibitor activity against human proteinases. 481

Effect of processing on some antinutritive factors of chickpea: Influence on protein digestibility and food intake in rats. 487

D.J. van Zuilichem, A.F.B. van der Poel and W. Stolp.
Different HTST inactivation methods for ANFs and the description of inactivation kinetics for soya. 493

Biotechnology

Reduction of legume antinutritional factors using biotechnological techniques. 501

The use of enzymes to denature antinutritive factors in soyabeans. 517

A. Viveros, A. Brenes, R. Elices and R. Canales.
Effect of enzyme addition (protease plus amylase and tannase) on the nutritive value of faba bean hulls in chickens. 523
M.M.T. Meijer and W.T.J. Spekking.
Enzymatic inactivation of proteinaceous protease inhibitors. 529

Session IV 'ANF Research Recommendations' and 'Closing'

I.E. Liener.
Summary of the presentations and recommendations for the future. 537

G.J.M. van Kempen.
Closing comments. 549
