5th WORLD CONGRESS OF CHEMICAL ENGINEERING

Technologies Critical to a Changing World

San Diego, California
July 14–18, 1996

VOLUME II

Agriculture, Food
Biotechnology
Biomedical
Electric Power
Process Safety

Hosted by American Institute of Chemical Engineers

Co-sponsored by Interamerican Confederation of Chemical Engineering
European Federation of Chemical Engineering
Asian Pacific Confederation of Chemical Engineering

Major Contributors E. I. duPont de Nemours and Company (Conference Sponsor)
Procter & Gamble Global Process Community (General Activity Sponsor)
M. W. Kellogg (International Sponsor)
Arthur D. Little (International Sponsor)
Mobil Oil Corporation (International Sponsor)
SESSION 30
Advances in Bioseparations

Chair Harvey Blanch

A Comparative Engineering Study of the Use of Expanded Bed and Packed Bed Routes for the Recovery of Labile Proteins from Crude Feedstocks
M. P. Smith, M. Bulmer, R. Hjorth, and N. J. Titchener-Hooker 565

Preparation of an Electrochemical Chromatographic Stationary Phase for Protein Separation
Philippe Lam, Kartik Kumar, Cary E. Wnek, and Todd M. Przybycien 571

Fusion Protein Purification with Affinity Membranes
Christiana Boi, Giulio C. Sarti, and Georges Belfort 575

Fluidized Bed Adsorption of Insulin Using Ion Exchange and Reverse Phase Interactions
Joel M. Cruz, Reginaldo Guirardello, Everson A. Miranda, and Cesar C. Santana 581

Protein Recovery from Yeast in Two-Stage Aqueous Two-Phase Processes
Marco Rito-Palomares and Andrew Lyddiatt 587

Protein Extraction by Reverse Micelles of Dialkyl Thiophosphoric Acids
Long Rong and Hiroshi Takeuchi 593

Optimization of a Semi-batch Chromatographic Reactor–Separator
C. M. West, E. L. Smith, and J. Rockliffe 599

Protein Extraction in a Rotating Disc Contactor Using Reversed Micellar Systems
Jihong Tong and Shintaro Furusaki 605

Development of a New Ion Exchange Resin Operation
Y. Kusunose, M. Yokoyama, and H. Itoh 611

New Process for Enzymatic Synthesis of Peptide with Extractive Reaction
Akira Hirata, Makoto Hirata, and Yoshihiko Murakami 615

Modeling of Hydrophobic Interaction and Ion Exchange Adsorption of α-Amylase
R. Soriano, L. F. Bautista, M. Martínez, and J. Aracil 621

Modeling of Continuous Separation of Amino Acids Using Rotating Annular Ion Exchange Chromatography with Gradient Elution
Akio Kitakawa, Yoshihito Yamanishi, and Toshikuni Yonemoto 627

Direct Recovery of Protein Products from Fermentation Broth Using Hydrophobic Adsorption
Michael Burns and Andrew Lyddiatt 633

Chemical Permeabilization of Escherichia coli, an Alternative to Mechanical Disruption?
Robert J. Falconer, Brian K. O’Neill, and Anton P. J. Middelberg 639

Dynamic Matrix Control of a Continuous Process of Enzymes Purification
M. L. Martins, E. C. Dechechi, R. Maciel Filho, and F. Maugeri 644

Separation of Carbohydrates from Aqueous Solution by Selective Adsorption on Apolar Zeolites
C. Buttersack, Iris Fornefett, and K. Buchholz 650
SESSION 31
Advances in Mathematical Modeling in Biotechnology

Chairs
Arnold Fredrickson
John Villadsen

Microbial Uptake of Mixed Substrates, Dissection of Cybernetic Models by Nonlinear Analysis
J. Varner, A. Narang, R. Ramakrishna, and D. Ramkrishna

Application of Metabolic Flux Analysis in Physiological Studies
Ulrik Schulze, Torben L. Nissen, Jens Nielsen, and John Villadsen

Metabolic Control Analysis Based on Experimental Observations and Mathematical Modeling of Intracellular Reactions under Transient Conditions
Matthias Reuss, Manfred Rizzi, Michael Baltes, Uwe Theobald, Klaus Mauch, and Sabine Arnold

Jia-Jer Liou, Friedrich Srienc, and Arnold G. Fredrickson

Population Balance Models of Autonomous Microbial Oscillations
Martin A. Hjortso

Adaptive Control of Biotechnological Reactors: On Line State and Parameter Estimation
Adilson J. de Assis and R. Maciel Filho

Mathematical Modeling of Fungal Growth and Morphology
Robert Lejeune and Gino V. Baron

Process Synthesis, Design, and Simulation of Integrated Biochemical Processes
I. David L. Bogle, Patrick P. C. Wai, Sabine Agena, Rafique Cani, Khosrow Bagherpour, Jens Nielsen, Morten Carlsen, Jose Aracil, Mercedes Martinez, Fernando Bautista, Roberto Soriano, Alundena Coterón, Michael Narodoslawsy, Martin Schichl, Jörg Altenburger, and Laszlo Halasz

Modeling of the Bioprocess for the Production of Riboflavin from Sugar Cane Molasses
Elba B. Herrera Infantes and Satya N. Mandavilli

Modeling of Oxygen Transfer and Its Effect on Bulk Oxygen Concentration in Aqueous-Organic Fermentation Reactor
Endre Nagy

Mathematical Model of Swelling and Germination of Fungal Spores in Inoculum Cultures
G. C. Paul and C. R. Thomas

Kinetic and Thermodynamic Analysis of the Penicillin Biosynthetic Pathway
Pedro de Noronha Pissarra and Jens Nielsen

Hydrodynamic Aspects of Airlift Reactors
J. Rajarajan and P. Ayazi Shamlou

Theoretical Prediction of Effectiveness Factor, Density, and Thickness of a Spherically Growing Biofilm
Abdurrahman Tanyolac and Haluk Beyenal

Mathematical Modeling for L-lysine Fermentation via Neural Network Estimators
Wen-Teng Wu, Yet-Pole I, Yung-Chung Liu, and Yuh-Lih Hsu

Modeling and Optimization of a Batch Process for In Vitro RNA Production
Jennifer S. Young, W. Fred Ramirez, and Robert H. Davis
SESSION 32
New Frontiers in Biochemical Engineering
Chair James Liao

Cell Culture Technologies to Produce Cells for Transplantation Therapies
E. Terry Papoutsakis

Engineering Anti-viral Strategies
John Yin and Drew Endy

Track: Biomedical
Chair Larry V. McIntyre
Rice University

SESSION 33
Chemical Engineering and Artificial Organs
Carlos Ramórez
Brian Bellhouse

Development of a Bioartificial Liver Immobilizing Porcine Hepatocytes in Nonwoven Fabrics and Its Ex Vivo Performance Evaluation
Yasuuki Sakai, Katsutoshi Naruse, Ikuo Nagashima, Tetsuichiro Muto, and Motoyuki Suzuki

Conversion of Ammonia into L-Valine by Using Ultrathin Spherical Nylon Membrane Containing Multienzyme System
K. Alsugair and T.M.S. Chang

Dynamics of Insulin Production by an Implanted, Extravascular Bioartificial Pancreas
Chen C. Chang, Joanne M. Belovich, and Jorge E. Catica

Solute Transport in the Hybrid Artificial Pancreas Device: In Vitro Results and Mathematical Simulation

The Design of a Dual Membrane System for Therapeutic Plasmapheresis
B. J. Bellhouse, M. P. Esnouf, Bin Gao, S. Najarian, and J. S. Henderson

One-Step Plasmapheresis Device: Design for Cholesterol Removal
Christopher W. Brown, Kenneth A. Solen, and Gretchen Kunas

Mathematical Hemodynamic Evaluation of Intrathoracic Artificial Lungs
Keith E. Cook, Lyle F. Mockros, Anthony J. Makarewicz, and Constantine Mavroudis

Nitric Oxide: A Biological Molecule
Randy S. Lewis

SESSION 36
Drug Delivery
Chair Gilda Barabino

Controlled Delivery of Inhibitors of Smooth Muscle Cell Proliferation Using Biodegradable Polymer Microparticles
R. L. Cleek, A. A. Rege, L. Denner, S. G. Eskin, and A. G. Mikos
Contents

Surface-Modified Polymerized Liposomes: Novel Vehicles for Oral Vaccination  
Hongming Chen, Vladimir Torchilin, and Robert Langer
824

Delivery of Vaccines by Biodegradable Polymeric Microparticles with Bioadhesion Properties  
Debra J. Trantolo, Joseph D. Gresser, Luyu Yang, Donald L. Wise, Jonathan F. Smith, and Paul J. Giannasca
830

Modeling Fluctuations of Drug Release in the Gastrointestinal Tract  
834

Track: Electric Power

Chair    Ronald Wolk
Wolk Integrated Technical Services

SESSION 40
Coal and Nuclear Central Station Power Plants

Chair    Neville Holt

State and Future of Super Critical PC Power Plants  
Sven Kjaer
843

Nuclear Plant Operations: The U.S. Experience  
James Lang
849

Current Status and Future Perspective of Nuclear Waste Disposal in the United States  
Rosa Yang
855

Utility Requirements for Advanced Light Water Reactors  
A. Machiels, S. Gray, T. Mulford, and E. Rodwell
859

SESSION 41
Large Natural Gas Fired Power Stations

Chair    Francis Lau

Advanced Gas Turbines: The Choice for Low-Cost, Environmentally Superior Electric Power Generation  
Charles M. Zeh
869

Natural Gas-Fired Combustion Turbines for the 21st Century  
Ronald L. Bannister and Richard A. Newby
875

Comparative Thermodynamic, Technical, and Economic Analysis of Repowering Existing Steam Turbine-Generator Units by Addition of Gas Turbine Units with Partial Oxidation  
V. M. Maslennikov, V. Ja Shterenberg, Yu. A. Vyskubenko, and E. A. Tzalko
881

The Status of U.S. Fuel Cell Technology  
John B. O’Sullivan
886

SESSION 42
Distributed Generation

Chair    Dan Rastler

Distributed Resource Perspective  
R. A. Figueroa
893
Contents

Electrical Power Systems for Distributed Generation in Industrial and Chemical Applications 895
  Thomas A. Robertson

Fuel Cell Power Plants in a Distributed Generator Application 901
  Murdo J. Smith

A Partnership of the U.S. Department of Energy and Solar Turbines Incorporated to Develop and Commercialize the Premier Power Source for the 21st Century 907
  Laurence S. Wilken and Richard Brent

Development Status and Applications of the Tubular Solid Oxide Fuel Cell 912
  Frank P. Bevc, Stephen E. Veyo, and Wayne L. Lundberg

SESSION 43
Potential Impact of Renewable Biomass Energy
  Chairs  Don White
           Ralph Overend

Factors Influencing the Adoption of Biomass Energy Systems: An Evaluation for Iowa 921
  Robert C. Brown, Joe Colletti, and Arne Hallam

Model for Reaction Kinetics in Pyrolysis of Wood 927
  Pradeep Ahuja, Prem C. Singh, S. N. Upadhyay, and Surendra Kumar

Power Production from Renewable Resources in a Gasification Power System 932
  Mark A. Paisley, Glenn Farris, and Richard Bain

Principles of Fuel Blending Applied to Cofiring of Biofuels in Coal-Fired Boilers 938
  David A. Tillman

Wood Liquefaction for Fuel, Chemical, and Power Applications: Commercial RTP® Experience 944
  Robert G. Graham

Track: Process Safety
  Chair  Tom Gibson
         Dow Chemical Company

SESSION 48
Risk Management in Plant Design
  Chair  Peter Lodal

Dow Chemical's Functional Input and Evaluation Process: A Managed Approach to Project Risk 951
  John F. Murphy

Knowledge Framework and Task Shell for Hazard Identification 958
  Yeo Hong Yoon and En Sup Yoon

Ensuring Quality in Process Hazard Analysis Studies 963
  David A. Moore

Study on Safety Evaluation for Startup 969
  Sanggyu Lee, Rafael Batres, Ming Liang Lu, and Yuji Naka
SESSION 49
Siting Criteria during Design Stages

Chair Keith Cassidy

Selecting Appropriate Fuel–Air Volume Sizes When Conducting Vapor Cloud Explosion Modeling for Building Siting

D. H. Hobbs

The Use of a Ranking Matrix and Recommendation Prioritization System for Process Hazard Analysis Studies

David A. Moore

Physical Planning and Societal Risk

B.J.M. Ale, G.M.H. Laheij, and P.A.M. Uijt de Haag

Major Hazard Analysis by Hazop Integrated System Modeling and Computer Based Qualitative Reasoning

E. Huber, G. Burgbacher, P. Fröhlich, and X. Laufenberg

UK Risk Criteria for the Siting of Hazardous Installations and Development in Their Vicinity

Keith Cassidy

Next Generation Risk Management

Robert Schumacher, Robin Pitblado, and Ståle Selmer-Olsen

SESSION 50
Design Considerations in Plants Handling Hazardous Materials during Emergency or Upset Conditions

Chair David Schulz

Advancing Inherent Safety into Methodology

William K. Lutz

Control of Runaway Reactions by the Injection of Inhibiting Agents

U. Kammel, S. Schlüter, A. Steiff, and P. M. Weinspach

Design Considerations during Emergency or Upset Conditions (In Plants Handling Hazardous Materials)

David C. Schulz

Glass Fragment Hazards from Vapor Cloud Explosions

Quentin A. Baker and Craig M. Doolittle

Response Time Evaluation for Emergencies

D. A. Kruger

A Quantitative Approach to Determination of NFPA Reactivity Hazard Rating Parameters

T. C. Hofelich, B. A. Prine and N. E. Scheffler

SESSION 51
Chemical Hazards in Plant Design

Chair Henry Kohlbrand

Reaction Calorimetry for Process Development: Recent Advances

Jasbir Singh

Emergency Relief Systems’ Design for Multipurpose Plants

J. H. Steinbach
Contents

Safe Handling of Easily Ignitable Dusts
Richard Siwek and Norbert Jaeger 1063

Safe Design of a Thermally Unstable Solid Storage Container: Natural Convection Effects on Thermal Ignition
H. Zoghlimi, J. C. Adrian, R. Papp, A. Laurent, and J. P. Corriou 1069

LFL Estimates for Crude Oil Vapors from Relief Tank Vents
Ronald Petersen, Kevin Watson, and Rich Roehner 1075

Application of Pressure Nutsche Filtration and Drying Technology for Toxic Chemicals
Barry A. Perlmutter 1081

Pressure Relief with Highly Viscous Fluids
Jens Fründt, Artur Steiff, and Paul-Michael Weinspach 1087

SESSION 52
Case Studies of Inherently Safe Design

Chairs Dennis Hendershot
Randy Freeman

Improved Safety Through Distributed Manufacturing of Hazardous Chemicals
T. A. Koch, K. R. Krause, and M. Mehdizadeh 1095

Inherently Safer Design Review of a New Alkylation Process
A. J. McCarthy, J. M. Ditz, and P. M. Geren 1099

Safe Design of Direct Steam Injection Heaters
S. Dutt 1107

Quantifying the Inherent Safety of Chemical Process Routes
D. W. Edwards, A. G. Rushton and D. Lawrence 1113

The Disposable Batch Plant
Jack W. Ponton 1119
