# Contents

Seminar Committee ............................................................... vii
Introduction ........................................................................... ix

**SESSION 1. QUALITY ASSURANCE IN DIAGNOSTIC RADIOLOGY I** .......................................................... 1

- **Design Considerations for X-ray Equipment** ................................................................. 2
  Pieter W. Kok, Philips Medical Systems, Inc.

- **In-Depth Technical Study of New Radiological Facilities** ........................................... 6
  Richard Dobrin, Albert Keegan, Laszlo Berkovits, Steven Rudolph, New York University Medical Center

- **Acceptance Testing Experience with Fourteen New Installations** .................................. 12
  Phillip L. Rauch, Roger W. Block

- **Comprehensive Quality Assurance Program—Report of Four Years’ Experience at University of Alabama** ........................................ 19
  Gary T. Barnes, Robert E. Nelson, David M. Witten, University of Alabama School of Medicine

- **Equipment Performance Analysis Methods** .................................................................. 26
  Thomas Stone, University of Minnesota

- **Role of kVp Accuracy of Diagnostic X-ray Units and other Performance Parameters in Quality Assurance** ................................... 31
  Dale E. Starchman, Ronald G. Johnson, David L. Hykes, Willard J. Howland, Northeastern Ohio Universities College of Medicine and Aultman Hospital

- **Application of Dynalyzer II to X-ray Quality Control** .................................................. 37

- **Determination of Diagnostic X-ray Spectra from Ionization Chamber Measurements** .............................................................. 43
  J. O. Barnes, J. Y. Ting, P. N. Shrivastava, Allegheny General Hospital

- **Concept of Effective Exposure Time for Three-Phase Diagnostic Radiologic Equipment** .................................................. 48
  Richard T. Mooney, Jose Burgos, Walter A. Matis, Jr., New York City Health and Hospitals Corporation

- **Report of a Significant Source of Unnecessary and Medically Unproductive Radiation Exposure** .............................................. 54
  Richard T. Mooney, Jose Burgos, Walter A. Matis, Jr., New York City Health and Hospitals Corporation

- **Device for Checking Alignment of Fluoroscopic Systems** ............................................. 59
  Pei-Jan Paul Lin, Northwestern University

- **Obsolescence of the In-House Radiology Equipment Service Engineer** ............................ 63
  Mario G. Wiedenmeier, University of Texas Medical Branch

**SESSION 2. QUALITY ASSURANCE IN DIAGNOSTIC RADIOLOGY II** .......................................................... 67

- **Focus Measurements Using the Star Test Pattern** ......................................................... 68
  Arthur E. Burgess, University of British Columbia

- **System-Model for High-Precision Evaluation of Focal Spots** ......................................... 76
  Tamas Sandor, Hasbrouck Wright, Bruce Mann, Sven Paulin, Harvard Medical School

- **Correction Factors for the Longitudinal and Transverse Dimensions of X-Ray Tube Focal Spots** ........................................ 81
  Satish C. Prasad, Washington University School of Medicine

- **Composite Blur Analysis** ......................................................................................... 88
  Perry Sprawls, Emory University

- **Evaluation of Three Portable Sensitometers for Use in Processor Monitoring** ................ 92
  Roger L. Triplett, Rochester Institute of Technology; David A. Page, Duke University Medical Center

- **Application and Clinical Evaluation of a Sensitometric System in a Cardiac Catheterization Laboratory** ......................... 98
  James A. Cox, Schuyler E. Hardin, Shands Teaching Hospital, University of Florida
SESSION 3. COMPUTED TOMOGRAPHY I .................................................. 107

Simultaneous Iterative Reconstruction Technique as a Least-Squares Method ........................................ 108
A. V. Lakshminarayanan, State Univ. of New York, Buffalo; A. Lent, Mayo Foundation

Preprocessing X-Ray Transmission Data in CT Scanning ................................................................. 117
Michael J. Dennis, Robert G. Waggener, William D. McDavid, William H. Payne, Victor J. Sank,
Radiology Department, University of Texas Health Science Center at San Antonio

Effect of Noise in the Projection Data on the Reconstruction Produced by Computerized Tomography .......... 124
Stuart W. Rowland, State University of New York at Buffalo

Noise and Dose in Energy Dependent Computerized Tomography ...................................................... 131
Robert E. Alvarez, Varian Associates; Albert Macovski, Stanford University

Qualitative and Quantitative Artifact from CT Algorithms ............................................................... 138
P. R. Moran, L. E. Barrollhet, R. M. Witt, University of Wisconsin

SESSION 4. RADIOGRAPHIC IMAGES AND DOSE ........................................... 147

Differential Energy Absorption X-Ray Cassette .................................................................................. 148
M. P. Siedband, R. J. Jennings, L. A. DeWerd, R. J. Eastgate, D. L. Ergun, University of Wisconsin

Optically Projected X-Ray Images from a Sealed Chamber Ionography System ................................ 152
Philip W. Walton, Medical College of Virginia

Radiographic Images by Solid State Ionography .................................................................................. 158
Larry A. DeWerd, P. R. Moran, University of Wisconsin

Dependence of Quantum Noise on Screen Sharpness ........................................................................... 164

An N6 Method for Evaluation of Screen-Film Combinations ............................................................ 172
R. J. Eastgate, M. P. Siedband, D. L. Ergun, C. L. Thomason, University of Wisconsin

Intensified Minification Cameras for Low-Dose Radiography ............................................................. 176
J. R. Herrington, W. C. Grable, Varo, Inc.

Improvements in the Performance of Intensifying Screens by Energy Selective X-Ray Filtration ......... 184
J. E. Villagran, J. E. Gray, B. B. Hobbs, G. D. Gillan, University of Toronto

Value of Making the 0.2mm Microfocus Tube the Standard for Routine Direct Magnification Angiography 190
Arthur E. Rosenbaum, Harvey Eisenberg, Wiyada Soujatonand, Lawrence S. Oresick, Therese A. Martin,
Maureen A. O'Toole, William P. Holland, George R. Mahn

Simple Contrast-Enhancement Viewer for Film .................................................................................... 202
Osmar A. Ullrich, Paul G. Andrus, Battelle Memorial Institute

SESSION 5. COMPUTED TOMOGRAPHY II ...................................................... 209

Physical Comparison of a Fluoroscopic CAT System and the EMI Head Scanner ............................. 210
N. A. Baily, R. A. Keller, University of California, San Diego

In vivo Determination of Bone Density—A Comparative Study ......................................................... 216
Norbert E. Reich, Frank E. Seidelmann, Ray R. Tubbs, William MacIntyre

Commissioning of Computed-Tomography Scanners—An Overview ................................................ 220
Leland R. Kirkland, National Cancer Institute; Tommie J. Morgan, Bureau of Radiological Health

Development of a Phantom for Evaluation and Assurance of Image Quality in CT Scanning .............. 228
David J. Goodenough, Kenneth E. Weaver, David O. Davis, George Washington University Medical Center

Three-Dimensional Radionuclide Tomography with Circular Ring Positron Camera ......................... 262
Z. H. Cho, M. Singh, J. Chan, University of California

Transverse Section Imaging with the MGH Positron Camera ............................................................ 262
J. Correia, G. L. Brownell, C. Burnham, D. Chelser, Massachusetts General Hospital

Positron Imaging System for the Measurement of Regional Cerebral Blood Flow ........................... 263
C. J. Thompson, Y. L. Yamamoto, E. Meyer, Montreal Neurological Institute, McGill University

Role of CT Scanners in Radiotherapy ................................................................................................. 269
Leland R. Kirkland, National Cancer Institute; Daniel Syed, William L. Risso, Jr., National Institutes of
Health; Tommie J. Morgan, Libby B. Smith, Bureau of Radiological Health
SESSION 8. QUALITY ASSURANCE IN DIAGNOSTIC RADIOLOGY III

Results of Performance Testing of Certified Diagnostic X-Ray Equipment
Gregory J. Barone, Charles K. Showalter, Bureau of Radiological Health

Some Sources of Errors in the Performance Testing of Diagnostic X-Ray Systems

Exchange of Information between the Purchaser and Supplier of Radiologic Imaging Equipment
Raymond P. Rossi, William R. Hendee, University of Colorado Medical Center

Equipment Installation Acceptance
Harry D. McMullen, Harry D. McMullen and Associates

Acceptance Testing—Is It Worth the Effort?
Carl C. Scheid, General Electric Company, Medical Systems Division

Purchase Specifications—A Manufacturer's Viewpoint
Gordon P. Stanhope, Picker Corporation

Will the Real Clinical Performance Requirements for X-Ray Diagnostic Systems Please Stand Up?
Joe R. Coleman, General Electronic Company, Medical Systems Division

Management of the Radiographic Environment
William G. Irvine, Eastman Kodak Company

Du Pont Quality Assurance Program for the Radiology Department

Possible Role of the Centers for Radiological Physics in the Physics of Diagnostic Radiology
Lloyd M. Bates, AAPM-CRP Coordination Program

SESSION 9. CURRENT TOPICS IN MAMMOGRAPHY

Computer Assisted Densitometric Detection of Breast Cancer
Sheldon L. Wagner, Kennan T. Smith, Ronald B. Guenther, Oregon State University; Donald C. Solomon, State University of New York at Buffalo

Mammographic Image Quality
James M. Hevezi, University of Texas Medical School

Spectral Studies in Mammography
F. O'Foghludha, G. Allan Johnson, Duke University Medical Center

Physical and Dosimetric Data Relating to Film and Xeromammography
Stanley J. Malsky, Donald F. Simon, The Guttman Institute

Possibilities of Dose Reduction in Radiographic Breast Screening
P. N. Shrivastava, Allegheny General Hospital

Risks and Benefits in Mammography—Estimating the Inestimable
John C. Bailar III, National Cancer Institute

Present Program of the National Cancer Institute in Screening for Breast Cancer—Some Preliminary Data on Screening and Monitoring
Winfred F. Malone, National Cancer Institute

Mammographic Screening for Breast Cancer—Three Years to Date, What Have We Wrought?
Myron Moskowitz, Peter Gartside, Linda Gardella, Ido deGroot, Deborah Guenther, University of Cincinnati, Medical Center
