Fifth SOHO Workshop

The Corona and Solar Wind Near Minimum Activity

17–20 June 1997
Institute of Theoretical Astrophysics
University of Oslo, Norway

Sponsored by:
European Space Agency
University of Oslo
Norges forskningsråd
Contents

Welcome/Dedication
Chairman: O. Kjeldseth-Moe

Dedication to Bruce Patchett, by A. Gabriel 3
Address to the Workshop, by K. Patchett 4

Invited Reviews
Chairs: O. Engvold, M. Carlsson & B. Schmieder

One Year of CDS: Highlights from Observations using the Coronal Diagnostic Spectrometer on SOHO
R.A. Harrison 7

Highlights of the SUMER Observations on SOHO
K. Wilhelm/SUMER Consortium 17

The First 1.5 Year of Observations from SWAN Lyman-Alpha Solar Wind Mapper on SOHO
J.L. Bertaux et al. 29

The Sun at Minimum Activity: Results from the CELIAS Experiment on SOHO
P. Boschler et al. 37

Waves, Shocks and Non-Stationary Phenomena in the Outer Solar Atmosphere
V.H. Hansteen 45

Flows of Mass, Momentum and Energy in the Solar Atmosphere: A SOHO-Oriented View of Cold Loops
G. Peres 55

Coronal Hole Structure and the High Speed Solar Wind
T.E. Holzer & E. Leer 65

The Quiescent Corona and Slow Solar Wind
G. Noci et al. 75

CME Onset Studies
R.A. Harrison 85

Magnetic Fields and Coronal Structures
E.R. Priest 93

Rapidly Time Variable Phenomena: Jets, Explosive Events, and Flares
K. Shibata 103

Particles in the Solar Wind
P. Bochsler 113
Working Group Reports

Working Group 1: Non-Stationary Processes
   P.G. Judge

Working Group 2: Flows of Mass, Momentum and Energy
   P. Lemaire

Working Group 3: Coronal Hole Structure and High Speed Solar Wind
   E. Marsch

Working Group 4: The Quiet Corona and Regular Solar Wind
   R. Hammer

Working Group 6: Magnetic Fields, Coronal Structure and Phenomena
   K.J. Schrijver

Working Group 9: Particles in the Solar Wind
   A.J. Lazarus

Poster Papers

Solar Wind Iron Charge States Observed with High Time Resolution with SOHO/CELIAS/CTOF
   M.R. Aellig et al.

Investigating the Formation of the Helium Spectrum with Coordinated SOHO/Kitt Peak/
Sacramento Peak Observations
   V. Andretta et al.

The Solar Minimum X2.6/1B Flare and CME of 9 July 1996; Part 1: Solar Data
   M.D. Andrews et al.

Signature of Open Magnetic Field Lines in the Extended Solar Corona and of Solar Wind Acceleration
   E. Antonucci et al.

On Signatures of Nonthermal Particles During CME Acceleration
   H. Aurass et al.

Shock Signature in Sunspots
   S. Bard & M. Carlsson.

Slow Magnetosonic Waves and Instabilities in Expanded Flux Tubes Anchored in
Chromospheric/Photospheric Regions
   A.J.C. Beliën et al.

Heating of Coronal Loops by MHD Waves Driven by Photospheric Motions
   D. Berghmans

Intensity and Velocity Variations in Transition Region Lines Observed with SUMER
   R. Betta et al.
Statistical Analysis of a Bright Point Observed Simultaneously in Two Chromospheric and Transition Region Lines by SUMER
K. Bocchialini et al.

Analysis of a High Latitude Slow CME with Travelling Ejecta
S. Boulade et al.

Ground and Space-Based Studies of Solar Wind Acceleration
A.R. Breen et al.

Systematic Redshifts in the Quiet Sun Transition Region and Corona Observed with SUMER on SOHO
P. Brekke et al.

The EUV Solar Irradiance Spectrum Observed with the Coronal Diagnostic Spectrometer (CDS) on SOHO
P. Brekke & W.T. Thompson

An Equatorial Coronal Hole at Solar Minimum
B.J.I. Bromage et al.

EUV Line Emission and Time Dependence in the Sunspot Region NOAA 7981
N. Brynildsen et al.

Transition Region Velocities and Line Profiles in the Sunspot Region 7981
N. Brynildsen et al.

The Non-Uniformity in the Sunspot Transition Region
N. Brynildsen et al.

The Net Redshift in EUV Emission Lines and the Connection Between Intensity and Doppler Shift
N. Brynildsen et al.

Some Features of the Post-CME Energy Release in the Solar Corona
I.M. Chertok

Testing the Extrapolated Coronal Magnetic Fields by Using Propagation Effects at Microwaves
F. Chiuderi Drago et al.

Ultraviolet Spectroscopy of a Coronal Mass Ejection with UVCS
A. Ciaravella et al.

Wave and Small-Scale Dynamics Study Using High-Cadence EIT Image Sequences
F. Clette & D. Berghmans

Physical Parameters in Plume and Interplume Regions from UVCS Observations
G. Corti et al.

UVCS/SOHO Empirical Models of Solar Coronal Holes
S.R. Cranmer et al.

Non-Thermal Weak Radio Bursts: X-ray and/or EUV Counterparts?
N. Crosby et al.

EUV Observations of Bi-directional Jets in the Solar Corona
W. Curdt et al.
Dynamical Properties of the Chromosphere and Transition Region in the Supergranular Network: What Precision of the Spectral Line Characteristics Can be Reached?  
W. Curdt et al.

Measurement of Above-Limb Coronal Intensities  
C. David et al.

Temperature Structure in Coronal Holes  
C. David et al.

Spectroscopic Diagnostics Applied to the August 1996 Equatorial Coronal Hole
