4th International Symposium on

Fluid-Structure Interactions,
Aeroelasticity, Flow-Induced
Vibration and Noise

Volume I

Presented at
The 1997 International Mechanical Engineering Congress and Exposition
November 16-21, 1997
Dallas, Texas

Sponsored by
The American Society of Mechanical Engineers
The Aerospace, Applied Mechanics, Fluids Engineering, Heat Transfer,
Noise Control and Acoustics, Nuclear Engineering, and Pressure Vessels and Piping Divisions
The Japan Society of Mechanical Engineers
The Institute of Mechanical Engineers
The Canadian Society for Mechanical Engineering
The International Association for Hydraulic Research

Edited by
M. P. Paidoussis
McGill University
T. M. Farabee
David Taylor Research Center
A. K. Bajaj
Purdue University
F. Hara
Science University of Tokyo
T. C. Corke
Illinois Institute of Technology
D. R. Williams
Illinois Institute of Technology
C. Dalton
University of Houston

The American Society of Mechanical Engineers
United Engineering Center / 345 East 47th Street / New York, N.Y. 10017
CONTENTS

NUMERICAL METHODS IN FSI

Introduction

T. C. Corke, D. R. Williams, and M. P. Païdoussis .................................................. 1

Analysis of Fluid-Structure Interaction by Means of Dynamic Unstructured Meshes

F. J. Blom and P. Leyland .......................................................... 3

Numerical Study of the Effects of the Transverse Cylinder Oscillation on the Laminar Wake

P. Anagnostopoulos ............................................................. 11

Simulation of the Incompressible Viscous Cross-Flow Around an Oscillating Circular Cylinder via the Random Vortex Method

M. H. Akbari and S. J. Price .................................................. 21

Application of Advanced Vortex Method to Simulation of Self-Excited Vibration of a Circular Cylinder in Two-Dimensional Uniform Flow

Hiroaki Matsumoto, Kyoji Kamemoto, and Yoshifumi Yokoi .................................. 33

Computational Navier-Stokes Solutions of Unsteady Confined Flows Based on Time-Dependent Coordinate Transformations for Unsteady Fluid-Structure Interaction Problems

D. Mateescu and M. Païdoussis .................................................. 41

Optimization of Fluid-Structure Interaction Using the Sensitivity Equation Approach

Rajesh Bhaskaran and Gal Berkooz ............................................. 49

A Finite Volume Method for the Computation of Fluid Flow With Moving Grid for Fluid-Structure Interactions

S. Mounsif and A. L. Amarante Mesquita ............................................. 57

Symmetric Formulations for Modal Analysis of Internal Fluid Structure Systems

Roger Ohayon ................................................................. 67

Exploration of Flow-Induced Vibration at Low Mass and Damping

Mohammed R. Gharib, Douglas G. Shiels, Morteza Gharib, Anthony Leonard, and Anatol Roshko .................................................. 75

NUMERICAL METHODS IN FSI

Introduction

C. Dalton and M. P. Païdoussis ............................................. 83

Vortex Structures in Flow Over a Rectangular Plate

John Sheridan, Kerry Hourigan, and Richard Mills ............................................. 85

Investigation of Impulsively-Started Flow Around Side-by-Side Circular Cylinders: Application of Particle Image Velocimetry

David Sumner, Stuart J. Price, and Michael P. Païdoussis ............................................. 93

Investigation of Boundary Layer Behavior on Single and Tandem Cylinders

T. Lee and A. Panagakos .................................................. 103

Vortex Induced Vibration of Chemical Plant Towers

H. G. D. Goyder .................................................. 113

Modeling Vortex-Excited Vibrations of Uniform Cylinders in Uniform and Shear Flow

Sathish Balasubramanian and Richard A. Skop ............................................. 121

A Numerical Study of Oscillatory Flow Around Circular and Square Cylinders

Atsushi Okajima and Takahiro Yasuda .................................................. 127

Lift Coefficient Variation on a Cylinder Forced to Oscillate

John E. Bernhardt, Jadran Mihailovic, Carlos F. Jines, Aziz Abouel-Fotouh, Thomas C. Corke, and David R. Williams .................................................. 135
Failure Mechanism of a Thermocouple Well Caused by Flow-Induced Vibration:
Part 1 — Numerical Simulation and Water Experiment of Flow-Induced Vibration
Akira Yamaguchi, Masaki Morishita, Yusaku Wada, Koji Iwata, and
Masakazu Ichimiya.................................................................................................................. 139
Failure Mechanism of a Thermocouple Well Caused by Flow-Induced Vibration:
Part 2 — Interaction Between Flow-Induced Vibration and Fatigue Crack Growth
in a Thermocouple Well
Yusaku Wada, Masaki Morishita, Akira Yamaguchi, Koji Iwata, and
Masakazu Ichimiya.................................................................................................................. 149
The Applicability of the Quasi-Steady Assumption for Two Staggered Circular
Cylinders in Cross-Flow
D. S.-K. Ting, D. J. Wang, S. J. Price, and
M. P. Paidoussis...................................................................................................................... 159
Test Line Assessment of Mechanical Power Flow in Overhead Conductors and
Efficiency of Damping Devices
André Leblond, Pierre Van Dyke, Louis-Philippe Bibeau, and
Claude Hardy.......................................................................................................................... 169
Experiments on Vortex-Induced Vibrations of Pivoted Circular Cylinders
Albin A. Szewczyk, Sathish Balasubramanian, Fred L. Haan, Jr., and
Richard A. Skop....................................................................................................................... 177
Vortex Shedding From a Rotary Oscillating Cylinder
N. Fujisawa, K. Ikemoto, and K. Nagaya................................................................................ 185
Estimation of an Improved Technique for Measuring a Near Wake Flow Field
of a Bluff Body With a Parallel Triple-Wire Probe
R. Waka, T. Suzuki, Y. Ochiai, and T. Watanabe.................................................................. 191
An Experimental Study on Galloping of a Square Prism With a Splitter Plate
Through Indicial Lift Response
Katsuya Hirata, Yasuharu Nakamura, and
Tohru Iwasaki......................................................................................................................... 199
Numerical Study on Aeroelastic Instability of a Rectangular Cylinder in Heaving
Oscillations
Tetsuro Tamura and Yoshiaki Itoh.......................................................................................... 207
Numerical Study on Aeroelastic Behavior of a Circular Cylinder With Two
Degrees of Freedom
Tetsuro Tamura, Akira Hayakawa, and
Ray Okada.................................................................................................................................. 217
NONLINEAR DYNAMICS
Introduction
A. K. Bajaj and M. P. Paidoussis............................................................................................ 227
Calculation of Vibro-Impact Dynamics of Loosely Supported Rods
J. Knudsen, A. R. Massih, and L. Johansson........................................................................ 229
Multibody Systems in Nonlinear Waves
R. Kral, E. Kreuzer, and V. Schlegel.................................................................................... 239
Simulation of the Behavior of a Catamaran in Large Amplitude Motions
J. B. Tessier, B. Peseux, G. Delhommeau............................................................................. 247
A Low-Dimensional Model for Vortex Shedding Patterns Behind Vibrating
Flexible Cables
D. J. Olinger............................................................................................................................. 257
Flow-Induced Vibration of a Tube Array in the Inlet Region of a High Performance
Steam Generator; Part 2 — Unstable Vibration and Chaos
Toshihiko Iwase, Takeshi Sunami, Kazuhiko Matsutani, Tomomichi Nakamura,
Njuki W. Mureithi, Ayao Tsuge, Jiro Kasahara, Ken-ichi Tomomatsu, and
Osamu Takaba......................................................................................................................... 265
Nonlinear Galerkin Methods Applied in the Dimension Reduction of Vibrating
Fluid Conveying Tubes
A. Steindl, H. Troger, and J. V. Zemann.............................................................................. 273
Nonlinear Lateral Vibration of a Vertical Fluid-Conveying Pipe With End Mass:
Effect of Horizontal Excitation at the Upper End
Masatsugu Yoshizawa, Masanobu Watanabe, Kouji Hashimoto, and
Masaya Takayanagi.......................................................... 281
Fluid Flow-Induced Vibration of Suspended Nonlinear Cables
W. K. Chang, V. Pilipchuk, and R. A. Ibrahim.......................... 289
The Singular Nature of Rotating Circular Rings With Symmetry
D. Dane Quinn, Curtis B. Clemons, and
Kevin M. Dempsey.......................................................... 299
Dynamic Response of a Rod Due to Vortex-Induced Vibration
A. R. Massih and K. Forsberg.............................................. 307

IDENTIFICATION SCHEMES IN FSI
Introduction
F. Hara and M. P. Paidoussis............................................. 317
Identification of Linearised Parameters for Fluidelastic Instability
C. Meskell and J. A. Fitzpatrick........................................ 319
An Inverse Method for the Identification of a Distributed Random Excitation
Acting on a Vibrating Structure: Part 1 — Theory
S. Granger and L. Perotin................................................. 325
An Inverse Method for the Identification of a Distributed Random Excitation
Acting on a Vibrating Structure: Part 2 — Flow-Induced Vibration Application
L. Perotin and S. Granger.................................................. 333
Identification of Fluid Dynamic Coefficients for Multiple Mode Vibrations of a
Lightly Damped Rectangular Prism in Cross Flow
K. Kerenyi, T. Staubli, H. Drobit, and N. Massinger.................... 341

FLUID-SOUND AND FLUID-FLUID INTERACTIONS
Introduction
T. M. Farabee and M. P. Païdoussis.................................... 349
Simple Vortex Models for Vibration and Noise Caused by a Flow Over Louvers
in a Cavity Opening
K. N. H. Looijmans and J. C. Bruggeman................................ 351
Analytical Model for the Periodic Pressure Fluctuations Induced by Flow Over
a Cavity
Hyungseok Kook and Luc Mongeau..................................... 361
Broadband and Tonal Noise of Flow Excited Cavities
J. C. Bruggeman, K. N. H. Looijmans, and J. Golliard.................. 373
Aerodynamic Noise Calculation of a Detaching Flow
S. Huang and C. Bégquier.................................................. 381
Energy Flow Analysis of Flow-Excited Beams and Plates
F. Han, R. J. Bernhard, and L. Mongeau................................ 389
Experimental Study of Vibration and Acoustic Radiation of a Pipe Induced by
Fully-Developed Turbulent Air Flow
C. Durant and G. Robert.................................................. 397
Fluid-Structural-Acoustical Interactions of a Thin Plate in a Cannel With Flowing
Fluid
I. Zolotarev........................................................................ 403
Characterization of the Wind Noise Loading of Production Automobile Greenhouse
Surfaces
I. Zolotarev, J. Y. Her, and J. A. Moore................................. 411
Wall-Pressure Fluctuations Under a Three-Dimensional Boundary Layer
Ronald L. Panton......................................................... 419
Method for Measuring the Sound Intensity of Rotating Broadband Aerodynamic
Noise Sources
Daniel A. Haid and Luc Mongeau...................................... 429
Computation of Jet Noise Using Large-Eddy Simulation and Lighthill’s Analogy
David B. Schein and William C. Meecham............................ 439
Computation of Vortex Shedding and Radiated Sound for a Circular Cylinder
Jared S. Cox, Christopher L. Rumsey, Kenneth S. Brentner, and Bassam A. Younis................................. 447
The Flow Dynamics of an Asymmetrical Circular Cylinder Under Acoustic Excitation
K. W. Lo and N. W. M. Ko ......................................................... 455
Flow/Acoustic Interactions for Two Cylinders in Cross Flow
J. A. Fitzpatrick and F. Nitti .................................................... 463
Author Index ............................................................................. 471
