THIRTEENTH INTERNATIONAL SYMPOSIUM ON AIR BREATHING ENGINES

SYMPOSIUM PAPERS
September 7-12, 1997
Chattanooga, Tennessee, USA

Edited by
Frederick S. Billig

Published and distributed by
AMERICAN INSTITUTE OF AERONAUTICS AND ASTRONAUTICS
1801 Alexander Bell Drive, Suite 500
Reston, VA 20191-4344
AEROPROPULSION PRODUCT DESIGN AND DEVELOPMENT PROCESSES

Process Optimization in Advanced Compressor Design
G. Schulze, H. Geidel, and K. Pirker .............................................................. 729

Application of Robust Design Techniques to Define Aircraft Propulsion Systems
R. Martin and J. Younghans .............................................................. 737

F100-PW-229 Robust Big Fan Development
W. McAnnally .............................................................. *

The Numerical Propulsion System Simulation: Concept to Product
J. Lytle .............................................................. 748

General Electric Flying Test Bed—A Reality from a Vision
P. Schultz and T. Bonser .............................................................. *

Numerical and Experimental Study on the Influence of Angle Orientations on the Behavior
of Discrete Film Cooling Holes on Turbine Bladings
R.-D. Baier, K.-D. Broichhausen, W. Koschel, and M. Parvizinia .............................................................. 758

FILM COOLING

A Method for Correlating the Discharge Coefficient of Film-Cooling Holes with Crossflows
at Hole Entry and Exit
M. Gritsch, A. Schulz, and S. Wittig .............................................................. 771

Discharge Coefficients of Rotating Orifices with Radiused Inlet Corners
R. Jakoby, T. Geis, S. Kim, and S. Wittig .............................................................. 778

Modelling Approach for the Prediction of Leading Edge Film Cooling Effectiveness
S. Biba and H.-P. Schiffer .............................................................. 787

Highly Resolved Distribution of Adiabatic Film Cooling Effectiveness for Turbine Leading Edge Film Cooling
W. Haslinger and D. Hennecke .............................................................. 797

A Study of the Flow and Heat Transfer Around a Single Flared Film Cooling Hole, Part I:
Experimental Investigation
L. Songling, X. Hongzhou, Z. Huireng, A. Forest, and B. Lapworth .............................................................. 807

A Study of Flow and Heat Transfer Around a Single Flared Film Cooling Hole, Part II: Numerical Investigation
B. Lapworth, A. Forest, and L. Songling .............................................................. 818

VOLUME II

CASCADE FLOW

An Annular Cascade Facility for Studying Tip Clearance Effects in High Speed Flows
K. Mathioudakis, K. Papailiou, N. Neris, C. Bonhomet, G. Albrand, and U. Wenger .............................................................. 831
Experimental and Numerical Investigation of the Influence of Endwall Inclination and Contouring on the Flow Field in a Highly Loaded Turbine Cascade
J. Schnaus and L. Fottner ................................................................. 840

Unsteady Euler and N-S Simulations of Wake/Stator Interaction
W. Wang and X. Zhao ........................................................................ 851

Formulation of a New Approach to Design Cascades Using Inverse Method: A Theory of Incompressible Inviscid Two-Dimensional Flow
G. Navarro and M. Masi ................................................................. 862

Investigation of Cascade Flow with Trailing Edge Jet
M. Ge, J. Wen, Z. Qi, H. Gu, and Y. Yang ........................................... 872

A Study of Blade Sweep on the Performance of a Transonic Cascade With and Without Endwall Influence
A. Weber and E. Nicke ................................................................. 877

NOZZLES AND EJECTORS

Mixing Performance of Radially Lobed Supersonic Nozzles
J. Kurian ....................................................................................... 891

Measurements of the Subsonic Lobed Mixer Flowfield

Experimental and Computational Investigation of Combined Supersonic Nozzles for Variable Stream Control Engines
A. Mazurov, V. Sokolov, and Y. Pavlyukov ........................................ 912

Experimental Studies on a Two-Dimensional Variable Ejector Nozzle for a Super/Hypersonic Transport

Design Feature of HYPR90-T Mixer Ejector and Its Aerodynamic/Acoustic Performance
T. Watanabe, H. Itahara, Y. Nakamura, and S. Tsugumi .................... 931

HIGH-SPEED PROPULSION SYSTEM PERFORMANCE

Performance Analysis of Inverse Cycle Engine at Design and Off-Design Points
X. Liu and S. Zhang ........................................................................ 945

Performance Evaluation of Scramjet Combustors
G. Masuya, T. Uemoto, Y. Wakana, K. Kudou, A. Murakami, and T. Komuro ................................................................. 952

The Impact of Using Slush Hydrogen on Turbopumps System for Air-Breathing Launcher
L. del Monte, L. Picchioni, and F. Gamma ........................................ 960

Fin Rocket for a Rocket-Based Combined Cycle
D. Connell, J. Teixeira, and W. Watkins ........................................... 969

Numerical Simulation of Viscous Non-equilibrium Flows in Scramjet Elements
L. Bezgin, A. Ganzhelo, O. Gouskov, and V. Kopchenov .................. 976

XVII
Combined Cycle for SSTO Rocket: Definition of the Key Technologies
V. Balepin and F. Breugelmans ......................................................... 987

COMBINED CYCLE ENGINE DEVELOPMENTS

Rocket-Based Combined Cycle Propulsion for Reusable Space Launch
W. Watkins and J. French ................................................................. 997

Performance Improvement Studies on Rocket Based Air Breathing Engine and Importance of the Rocket Oxidiser–Fuel Ratio
L. Chitilappilly, J. Subramanyam, R. Nagappa, and S. Srinivasan ......................................................... 1007

Strutjet-Powered Vehicles for Low Cost Space Launch
M. Bulman, A. Siebenhaar, and T. Bogar ......................................................... *

Viscosity and Off-Design Effects on the Performance of Detonation Wave Ramjets

Experimental Studies on Air Turbo Ramjet Engines for Hypersonic Flight Vehicles
N. Tsujikado, M. Koshimae, R. Ishikawa, and K. Kitahara ......................................................... 1018

SUPERSONIC AND HYPERSONIC INLET FLOW PROCESSES

Passive Boundary Layer Bleed for Supersonic Intakes
S. Raghunathan and J. Watterson ......................................................... 1027

The Aerodynamic Design and Wind Tunnel Tests of a Combined Intake for a Supersonic Transport
Y. Utaka, H. Taneda, A. Murakami, J. Omi, and H. Niwa ......................................................... 1035

Hypersonic Shock-Wave/Boundary-Layer Interaction Phenomena in Air-Breathing Inlet
M. Nishio and T. Hagiwara ......................................................... 1044

3-Dimensional Study on the Interaction Between Scramjet Engine Modules in Case of Unstart Transition
T. Onodera and S. Kaji ......................................................... 1052

Experimental Investigation of the Buzz Phenomenon in an Axisymmetric Supersonic Inlet
J. Kozak, S. Hongprapas, B. Moses, and W. Ng ......................................................... 1061

ENGINE HEALTH AND DIAGNOSIS

Automated, Real-Time Validation of Turbine Engine Test Data Using Explicit Parallelization of an Eight Processor Pentium Platform
C. Biegl, D. Malloy, and M. Chappell ......................................................... *

Development of a Near-Real-Time Feature Extraction Diagnostic System for Turbine Engine Testing
D. Malloy ......................................................... *

A Component Based Modelling Method for Steady State Performance Prediction and Diagnostics of Gas Turbines
M. Arslanoglu, Y. Gogus, I. Akmandor, E. Gunes, and J. Bird ......................................................... 1073
Monitoring and Fault Diagnosis of a Turbojet by Bayesian Inference
M. Consumi and L. d'Agostino ................................................................. 1082

Assessment of a Physical Model-Based Parameter Estimation Technique for Engine Diagnosis
J. Bird and H. Schwartz ........................................................................... *

Expert Systems and Neural Networks for Fault Isolation in Gas Turbines
G. Torella ................................................................................................. 1097

COMBUSTION SCIENCE

Emission Measurements in Aircraft Engine Exhausts Using Tunable Diode Laser Infrared Absorption
R. Miake-Lye and J. Wormhoudt ............................................................... 1109

Effects of Swirl and Momentum Distributions on Combustion Characteristics of Premixed Swirling Flames
S. Qi, A. Gupta, and M. Lewis ................................................................. 1120

Influence of Droplet Spacing on Drag Measurements for Isothermal and Reacting Conditions
P. Trichet, J. Virepinte, G. Lavergne, Y. Bisco, and O. Adam .................. 1131

Effects of Buoyancy on the Burning of a Liquid Droplet
P. Balakrishnan, T. Sundararajan, and R. Natarajan ............................... 1140

Active Combustion Control with Pulsed Fuel Injection
K. Schadow, K. Yu, and K. Wilson ....................................................... *

A Comparative Study on Performance of Fuel Rich Metallized Propellants
S. Patgaonkar, B. Athawale, S. Asthana, R. Nair, S. Shrotri, and S. Haridwar ................................................................. 1148

ENGINE BUSINESS IN THE NEXT MILLENNIUM

GEAE Commercial Market Assessment
R. Conboy ............................................................................................... *

Subsonic Commercial Aircraft Engine Technology in the Next Millenium-Business Considerations
R. Altman .............................................................................................. *

USAF Gas Turbine Trends Into the Next Century
R. May ................................................................................................... *

Lowering the Production Cost of Advanced Technology Engines
C. Skira ................................................................................................. 1161

Not Invented Here! Some Case Studies of Technology Transfer from UK Aerospace to Other Industrial Sectors
C. Pearce ............................................................................................... 1170

HEAT TRANSFER PREDICTION

Study of the Flow from a Row of Cooling Holes
M. Ballas and A. Goulas ........................................................................ 1183

XIX
Development and Assessment of Thermal Flux Models for Computation of Turbine Heat Transfer
N. Marciniak, P. Kulisa, and B. Lakshminarayana .................................................................1191

The Influence of Slot Ejection and Showerhead Ejection on the 3-D Flow Field of a Film-Cooled Turbine Blade
Under Consideration of Side Wall Effects
D. Bohn, V. Becker, K. Kusterer, S. Ardey, and L. Fottner .........................................................1203

Two-Equation Turbulence Models for Turbine Blade Heat Transfer Simulations
J. Larsson ......................................................................................................................................1214

The 2D Computation of Momentum and Heat Transfer for Flows with Two Characteristic Length Scales
E. Michaels, J. Schauer, and R. Rivir ..............................................................................................1223

Aero-Thermal Analysis and Optimization of Internally Cooled Turbine Airfoils
T. Martin and G. Dulikravich ........................................................................................................1232

AIR COLLECTION SCHEMES FOR HYPERSONIC PROPULSION

Air Liquefication and Enrichment System (ALES) Propulsion for Launch Vehicles
A. Yi ..............................................................................................................................................1253

Control of an Air Liquefaction and Enhancement System
R. Saeks, C. Cox, C. Lewis, and A. Yi ........................................................................................1259

Analysis and Research on Performance of Ram-Liquid Air Cycle Engine
H. Jin, S. Zhang, and R. Cai .........................................................................................................1266

Rocket-Ramjet Engine of Air Liquefaction Cycle (LACRE): Performance Analysis
and Experimental Investigations
V. Macaron and V. Surmanov ......................................................................................................1273

Influence of In-Flight LOX Collection Upon Ramjet Performances
P. Hendrick .....................................................................................................................................1284

Parameter Study of the Mixed Turbofan Power Unit for an In-Flight LOX Collection System
F. Bruegelmans and R. Van Raebroeck .......................................................................................1290

Integration of Cryogenic Cycle with a Scramjet
A. duPont ......................................................................................................................................1298

MILITARY ENGINE GOALS AND DEVELOPMENTS

Mission Dependent Optimization of Advanced Fighter Engines
T. Gronstedt and U. Hall ..............................................................................................................1298

Advanced Turbine Engine Concepts and Their Impact on the Next Millenium
J. Strieker and C. Norden ..............................................................................................................1299

The Integrated High Performance Turbine Engine Technology (IHPTET) Program
W. Koop .........................................................................................................................................1299

The Advanced Tactical Fighter Engine Development Program
M. Hirschberg ...............................................................................................................................1300
The Maturation Life Cycle of Derivative Fighter Engines  
R. Vallalba .................................................................................. *

Reinventing the Naval Aviation Propulsion and Power Business  
R. Prine, J. Walters, and P. Zimmerman .................................................. 1309

MECHANICAL AND THERMAL STRUCTURAL DESIGN

Material Challenges and Progress Toward Meeting the High-Speed Civil Transport Propulsion Design Requirements  
A. Johnson, B. Bartlett, and W. Troha .......................................................... 1321

Localized Thermal Buckling Due to Hot-Streaks in a Combustor Liner  
W. Zhuang and N. Swansson .................................................................. 1329

Thermo-Elastic Analysis and Optimization Environment for Internally Cooled Turbine Airfoils  
B. Dennis and G. Dulikravich .................................................................. 1335

Numerical Evaluation of Local Damages in Volume Models of Joints and Units  
V. Zhernakov and I. Budilov .................................................................. 1342

A Mechanistic Based Analysis of Fatigue Crack Propagation in Single Crystal Nickel Based Superalloys  
B. Antolovich, S. Antolovich, and A. Saxena .................................................. 1348

Simulation of Jet Plume Impinging onto a Duct  
S. Hong and K. Lee ............................................................................ 1359

FLOW INTERACTIONS AND TURBULENCE IN TURBO-MACHINERY

Study of the Interaction Between a Boundary Layer and a Moving Wake on the Pressure Side of a Blade  
A. Goulas and H. Stapountzis .................................................................. 1369

Investigation of Rotor/Rotor Interaction  
L. Wallscheid and F. Eulitz .................................................................. 1378

Comparison of 3-D Unsteady Navier-Stokes Codes Based on Structured and Unstructured Grids for Rotor-Stator Interaction  
C. Hah, J. Loelbach, and F.-L. Tsung .......................................................... 1388

Wake Mixing and Blade Clocking Effects in an Axial Compressor  
G. Walker, J. Hughes, W. Soloman, and I. Kohler ........................................ 1397

Investigation of Eddy Turbulent Diffusion and Radial Mixing in Axial-Flow Compressors  
K. Chiba, K. Kobayashi, M. Nishiuara, E. Outa, and D. Kato ..................... 1407

Assessment and Validation of Numerical Procedures and Turbulence Modeling for Computation of Viscous Flows in Turbine Cascades  
B. Lakshminarayana, P. Kulisa, and J. Slimani .................................................. *
EMISSIONS FROM GAS TURBINE COMBUSTION

Recent Progress in Low-Emissions Gas Turbine Combustors
H. Mongia ................................................................. 1421

Influence of Pressure on NOx-Emissions in Rich-Lean Combustion
J. Meisl, R. Koch, and S. Wittig ........................................ 1428

Pollutant Emissions of NOx and CO of a Computational Model of Gas Turbine Combustor
A. Awad and V. Molnar .................................................. *

Infra-red Suppression (IRS) System Developed for a 1000 Pound Thrust Engine
J. Baumbach .............................................................. 1437

Diagnostics for Characterization of Turbine Engine Exhaust Emissions
R. Howard ................................................................. *

Ground-Based Measurements of Particulate Emissions from Subsonic and Supersonic Transports
P. Whitefield, D. Hagen, M. Trueblood, and H. Lilienfeld ...................... *

HYPersonic VEHICLES: INTEGRATION SCHEMES

Streamline Tracing, A Technique for Designing Hypersonic Vehicles
F. Billig and A. Kothari ................................................. 1445

Propulsion-Airframe Integration of a Small Mach 4-8 Hydrocarbon-Fueled Airbreathing Cruise Research Vehicle
I. Blankson and L. Schindel ........................................... *

The Benefits of Highly Integrated Engines for Airbreathing Hypersonic Vehicles
J. Bogar, E. Elswirth, and G. Orton .................................. *

Impact of Fuel Selection on Hypersonic Vehicle Optimization
M. Lewis and A. Gupta .................................................. 1456

External Burning in Supersonic Flow—Problems and Limitations
G. Bussi, D. Patrone, and L. Casalino ................................. 1464

Space Launchers
P. Czysz, S. Murthy, H. Froning, and L. McKinney ...................... *

Scientific and Design Investigation on Ramjet Engines and Hypersonic Technologies in Ukraine
V. Timoshenko and V. Gusynin ........................................ 1473

ENGINE LIFE CYCLE COST CONSIDERATIONS

Engine Life Cycle Cost Control by Advanced Qualification Methods and Re-Engineering of Process for Repair and Relifeing Military Engine Parts
H. Hastings .............................................................. *

Trends in Commercial Maintenance: Competition–Value–Service
T. Briskin ................................................................. *

XXII
MIXING IN GAS TURBINE COMBUSTOR

Effect of Swirl on Mixing in a Combustor Model
I. Ghanem, A. Morgan, S. El-Haggar, and A. El-Mawla

Optimization of the Mixing Process in the Quenching Zone of an RQL-Combustor
M. Blomeyer, B. Krautkremer, D. Hennecke, and T. Doerr

Active Forcing of the Air and Fuel Feeds in a Swirl-Stabilized Spray Combustor
E. Gutmark

RADIAL COMPRESSOR DESIGN

An Explicit Multiblock Navier–Stokes Solver for Turbomachinery
F. Magliorini

Parallel Simulation of Flow Field Within a Centrifugal Impeller by Fully 3D S1/S2 Iteration Solution
X. Zhao

Experimental Evaluation of Precursors to Centrifugal Compressor Instability
P. Lawless

POWER AND POWER MANAGEMENT

High Efficiency Shaft Power Generation
J. Swithinbank

Numerical Analysis of the Unsteady Flow Inside Wave Rotors Applied to Air Breathing Engines
A. Fatsis and Y. Ribaud

Re-engining the C130 Hercules Transport
R. Hastings and J. Bird

Engine-Out Performance Characteristics
B. Anderson, D. Messih, and R. Plybon

ENGINE ENVIRONMENT

Gas Turbine Combustor Performance with Air-Water Mixture
M. Ravichandran and S. Murthy

Engine Compartment Cooling of a Helicopter
P. Mani and H. Prasad

Contribution to the Design of Air-Conditioning Turbines
X. Carbonneau, M. Lemasson, and J.-B. Cazalbou
HEAT TRANSFER IN ROTATING ENVIRONMENT

Comparison of Numerical Methods to Predict Heat Transfer in Rotating Cavities
A. Jerhamre and U. Hall ................................................................. 1579

Near-Wall Turbulence Models for Predicting Heat Transfer and Friction in Turbine Blade Cooling Passage
J. Visser .......................................................................................... *

Local Heat Transfer Coefficient Measurement in Rotating Cooling Channel
V. Krishnamoorthy, K. Sashidar, and B. Pai ............................................ 1586
