CONTENTS

Volume 1

Monday, February 16 - Grand Ballroom, 1:30 p.m. - 5:00 p.m.
SESSION 1: Plenary Session ................................................................. 1
Chairman: F. Dong Tan, TRW S&EG, Redondo Beach, CA

1.1 Power Technology Roadmap .......................................................... 3
D. Staffiere, Staffiere Consulting Services, Amherst, NH and J. Sarjeant, State University of
New York at Buffalo, Buffalo, NY

1.2 A Framework for Developing Power Electronics Packaging ................. 9
D. Hopkins, State University of New York, Binghamton, NY, S. Mathuna, University College,
Cork, IRELAND, A. Alderman, International Rectifier, El Segundo, CA and J. Flannery,
University College, Cork, IRELAND

1.3 A Checklist of What Can Zap Your Power Electronics ........................ 16
A. Brockschmidt, Boeing Defense & Space Group, Seattle, WA

1.4 Vienna Rectifier II - A Novel Single-Stage High-Frequency Isolated Three-Phase PWM
Rectifier System .............................................................................. 23
J. Kolar, U. Drofenik and F. Zach, Technical University Vienna, Wien, AUSTRIA

1.5 High Power Density Electric Drive for an Hybrid Electric Vehicle ............ 34
C. Namuduri and B. Murty, General Motors R&D Center, Warren, MI

1.6 Intellectual Property: Rich By-Product of Intellectual Capital .................. 41
D. Drinkwater, Digital Equipment Corporation, Maynard, MA

Tuesday, February 17 - South Ballroom A, 8:30 a.m. - 12:00 p.m.
SESSION 2: Synchronous Motor Drives ................................................. 47
Chairman: R. Mark Nelms, Auburn University, Auburn, AL

2.1 Drive System Control and Energy Management of a Solar Powered Vehicle .... 49
M. Godoy Simões, N. Franceschetti and J. Adamowski, The University of Sao Paulo,
Sao Paulo, BRAZIL

2.2 On Practical Digital Current Regulator Design for PM Synchronous Motor Drives .... 56
D. Ohm, Blacksburg, VA and R. Oleksuk, Kollmorgen Motion Technology Group,
Radford, VA

2.3 Near-Zero Speed Performance Enhancement of PM Synchronous Machines Assisted by
Low-Cost Hall Effect Sensors ......................................................... 64
J. Bu, L. Xu, The Ohio State University, Columbus, OH, T. Sebastian and B. Liu, Saginaw
Steering Systems, MI

2.4 Brushless Permanent Magnet Motor Drive System Using Load Commutated Inverter ..... 69
N. Sultana, D. Shet, H. Toliyat, Texas A&M University, College Station, TX, and J. Moreira,
Whirlpool Company, Benton Harbor, MI

2.5 Sensorless Permanent Magnet Synchronous Motor Drive with Reduced Order
Observer ....................................................................................... 75
K. Tatematsu, D. Hamada, K. Uchida, S. Wakao and T. Onuki, Waseda University, Tokyo,
JAPAN
2.6 Novel Periodic Torque Ripple Compensation Scheme in Vector Controlled AC Motor Drives ................................................................. 81
J.-W. Choi, S.-S. Lee, S.-Y. Yu and S.-J. Jang, LG Industrial Systems R&D Center, Kyongki-do, KOREA

2.7 Adaptive Torque Ripple Control of Permanent Magnet Brushless DC Motors ............... 86
Y. Sozer and D. Torrey, Rensselaer Polytechnic Institute, Troy, NY

Tuesday, February 17 - South Ballroom B, 8:30 a.m. - 12:00 p.m.
SESSION 3: PWM Technologies .................................................................................................................. 93
Chairman: Tom Hopkins, SGS Thomson Microelectronics, Schaumburg, IL

3.1 On-Line Dead Time Compensation Technique for Open-Loop PWM-VSI Drives ............... 95
A. Munoz-Garcia and T. Lipo, University of Wisconsin-Madison, Madison, WI

3.2 A New Random Inverter Control Technique for Motor Drives ................................................. 101
Y.-S. Lai, H.C. Huang, and Y.S. Kuan, National Taipei University of Technology, Taipei, TAIWAN, C.M. Young, National Taiwan University of Science and Technology, Taipei, Taiwan, R.O.C.

3.3 A Novel Harmonic Elimination Pulse-Width Modulation Technique for Static Converters and Drives ................................................................. 108
Y.-S. Lai, National Taipei Institute of Technology, Taipei, TAIWAN, S.R. Bowes, Bristol University, Bristol, UK

3.4 Self-Excited Induction Generator Controlled by a VS-PWM Bi-Directional Converter for Rural Applications ............................................................... 116
J. Pomilio and E. Marra, State University of Campinas-UNICAMP, Campinas-SP, BRAZIL

3.5 A Novel Single Fourier Series Technique for the Simulation and Analysis of Asynchronous Pulse Width Modulation ......................................................... 123
R. Guinee, Regional Technical College, Cork, IRELAND and C. Lyden, NMRC, University College, Cork, IRELAND

3.6 Discrete-Time Sliding Mode Control for Output Voltage Regulation of Three-Phase Voltage Source Inverters ................................................................. 129
S. Muthu and J. Kim, The University of Victoria, Victoria, B.C., CANADA

3.7 A Non-Contact Charger Using a Resonant Converter with Parallel Capacitor of the Secondary Coil ................................................................. 136
H. Abe, H. Sakamoto and K. Harada, Kumamoto Institute of Technology, Kumamoto, JAPAN

Tuesday, February 17 - North Ballroom A, 8:30 a.m. - 12:00 p.m.
SESSION 4: DC/DC Converters: Low Voltage Techniques ........................................................................... 143
Chairman: Dongyan Zhou, National Semiconductor Corporation, Santa Clara, CA

4.1 Investigation of Candidate VRM Topology for Future Microprocessors ......................... 145

4.2 A Very High Current, Wide Bandwidth Voltage Source for Microprocessor Testing .......... 151
N. Barabas, B&R Electronics, Chatsworth, CA
4.3 DC-DC Converter with Fast Transient Response and High Efficiency for Low-Voltage Microprocessor Loads
B. Arbetter and D. Maksimovic, University of Colorado, Boulder, CO

4.4 Several Alternatives for Low Output Voltage on Board Converters

4.5 Optimizing the Load Transient Response of the Buck Converter
R. Redl, ELFI S.A., Onnens FR, SWITZERLAND, B. Erisman and Z. Zansky, Analog Devices, Inc., Santa Clara, CA

4.6 150W Board Mounted Power Supply Module Using Highly Compact and Efficient Synchronous Rectifiers
A. Vithanage, A. Kamada, and M. Muramatsu, Iwaki Electronics Company, Ltd., Fukushima Pref., JAPAN

4.7 Diode-Less Multiple Output Flyback Converters

4.8 Low Power Multioutput Converter with Postregulation Based on Synchronous Rectification and Windings Integrated in the PCB
L. Alvarez-Barcia, S. Ollero and E. de la Cruz, ALCATEL Alsthom. Corporate Research Center, Madrid, SPAIN, F. Cañizales, ALCATEL CONVERTERS, Lannion Cedex, FRANCE

Tuesday, February 17 - North Ballroom B, 8:30 a.m. -12:00 p.m.
SESSION 5: Single-Phase PFC: Topologies

Chairman: Jian Sun, Rockwell Avionics and Communications, Cedar Rapids, IA

5.1 A High Efficient Low Output Voltage (3.3V) Single Stage AC/DC Power Factor Correction Converter
O. Garcia, J. Cobos, P. Alou, R. Prieto and J. Uceda, Universidad Politecnica de Madrid, Madrid, SPAIN

5.2 A Capacitor-Fed, Voltage Step-Down, Single-Phase Rectifier
N. Sokal, Design Automation, Inc., Lexington, MA, K. Sum, Consultant, Milpitas, CA, and D. Hamill, University of Surrey, Guildford, UNITED KINGDOM

5.3 New Charge Pump Power Factor Correction Electronic Ballast with a Wide Range of Line Input Voltage
J. Qian and F. Lee, Virginia Polytechnic Institute and State University, Blacksburg, VA, N. Onishi, Matsushita Electric Works R&D Lab., Woburn, MA

5.4 Single-Stage Single-Switch Power Factor Correction (S4-PFC) AC/DC Converters with DC Bus Voltage Feedback for Universal Line Applications
J. Qian, Q. Zhao and F. Lee, Virginia Polytechnic Institute and State University, Blacksburg, VA

5.5 Active Harmonic Filter Using Parallel Resonant DC Link Inverter Employing a Novel Current Initialization Scheme
K. Mahapatra, A. Ghosh and S. Doradla, Indian Institute of Technology, Kanpur, INDIA
5.6 A New ZVS-PWM Active-Clamping High Power Factor Rectifier: Analysis, Design, and Experimentation ................................................................. 230
C. Duarte, Catholic University of Pelotas, Pelotas, BRAZIL, and I. Barbi, Federal University of Santa Catarina, Florianopolis, BRAZIL

5.7 A New Single Transformer, Power Factor Corrected UPS Design ......................................................... 237
R. Morrison and M. Egan, PEI Technologies, University College, Cork, IRELAND

Tuesday, February 17 - Embassy Ballroom, 8:30 a.m. - 12:00 p.m.
SESSION 6: Marketing: Today’s Vision ........................................................................................................ 245
Chairman: Larry Gilbert, The Powerhouse Inc., Mission Viejo, CA

6.1 Managing Project Risk and the Performance Envelope ................................................................. 247
F. Miles and T. Wilson, Zytec Corporation, Eden Prairie, MN

6.2 Packaging and Manufacturing Trends for the Server Power Supply ................................................. 254
C. Stratas, Celestica, Inc., North York, Ontario, CANADA

6.3 Using Benchmarking to Quantify Power Supply Customer Perceptions ........................................... 259
L. Brush, The Darnell Group, Norco, CA

6.4 The Emergence of VARs in the Switching Power Supply Industry ................................................. 263
C. Heath Kubasti, Heath Resource Group, Sunnyvale, CA

6.5 Marketing of Regulation .......................................................................................................................... 267
M. Mankikar, Micro-Tech Consultants, Santa Rosa, CA

6.6 International Marketing for Small Manufacturing Enterprises in the Power Electronics Marketplace ...................................................................................................................... 271
J. Bowers, Custom Electronics, Inc., Oneonta, NY and D. Staffiere, Staffiere Consulting Services, Amherst, NH

6.7 Past, Present and Potential Dynamics Within the Power Supply Industry ................................. 278
L. Bloom, Venture Development Corporation, Natick, MA

Wednesday, February 18 - South Ballroom A, 8:30 a.m. - 12:00 p.m.
SESSION 7: Inverters ..................................................................................................................................... 285
Chairman: Bill Hazen, Consultant, Framingham, MA

7.1 Study of Bi-Directional Buck-Boost Converter Topologies for Application in Electrical Vehicle Motor Drives .................................................................................................................. 287
F. Caricchi, F. Crescimbini, F. Giulii Capponi, University of Rome “La Sapienza,” Rome, ITALY, and L. Solero, University of Rome, Rome III, ITALY

7.2 A New Resonant DC Link/Boost Converter Topology Applied to Extended Speed Operation of a Brushless DC Machine .......................................................................................................................... 294
A. Tuckey and D. Patterson, Northern Territory University, Darwin, N.T., AUSTRALIA

7.3 AC to AC Power Conversion Based on Matrix Converter Topology with Unidirectional Switches ......................................................................................................................................................... 301
S. Kim, S.-K. Sul, Seoul National University, Seoul, KOREA and T. Lipo, University of Wisconsin-Madison, Madison, WI
7.4 Performance Improvement in AC-AC SCR Controller .................................................. 308
A. Ginart, R. Esteller, Tennessee Technological University, Cookeville, TN, A. Maduro,
R. Piñero and R. Moncada, Universidad Simón Bolívar, Caracas, VENEZUELA

7.5 The Tandem Inverter: Combining the Advantages of Voltage-Source and
Current-Source Inverters ........................................................................................................ 315
A. Trzynadlowski, University of Nevada, Reno, NV, F. Blaabjerg and J. Pedersen, Aalborg
University, DENMARK and N. Patriciu, Technical University of Cluj-Napoca, Romania

7.6 Control of Parallel Inverters in Distributed AC Power Supply with Consideration
of the Line Impedance Effect ............................................................................................... 321
A. Tuladhar, H. Jin, University of British Columbia, Vancouver, B.C., CANADA, T. Unger
and K. Mauch, Statpower Technologies Corporation, Burnaby, B.C., CANADA

7.7 A High-Performance DSP Controlled Resonant-Commutated Converter ................. 329
S. Chickamenahalli and M. Ahmed, Wayne State University, Detroit, MI

Wednesday, February 18 - South Ballroom B, 8:30 a.m. - 12:00 p.m.
SESSION 8: DC/DC Converters: Modeling & Control ...................................................... 335
Chairman: David Perchlik, Interpoint, Redmond, WA

8.1 A Modified Flyback DC-DC Converter Topology ....................................................... 337
R. Singh, A. Joshi and A. Ghosh, Indian Institute of Technology, Kanpur, INDIA

8.2 An Efficient Approach to Modelling and Analysis of Power Electronic Circuits .......... 344
A. Yildiz and N. Abut, The University of Kocaeli, Kocaeli, TURKEY

8.3 Modeling of Cross-Regulation in Converters Containing Coupled Inductors .............. 350
D. Maksimovic and R. Erickson, University of Colorado, Boulder, CO and C. Griesbach,
Analog Systems, Morrison, CO

8.4 Automated Small-Signal Analysis of Switching Converters Using a General-Purpose
Time-Domain Simulator ...................................................................................................... 357
D. Maksimovic, University of Colorado, Boulder, CO

8.5 A Novel Feedforward Loop Implementation for the Half-Bridge Complementary-Control
Converter ........................................................................................................................... 863
F.F. Linera, J. Sebastián, J. Díaz and F. Nuño, Universidad de Oviedo, Gijón, SPAIN

8.6 Control Loop Interactions for Secondary Side Post Regulators .................................. 369
P. Cooke, Unitrode Corporation, Merrimack, NH

Wednesday, February 18 - North Ballroom A, 8:30 a.m. - 12:00 p.m.
SESSION 9: Components .................................................................................................... 377
Chairman: Jim Sarjeant, SUNY at Buffalo, Buffalo, NY

9.1 Fully Integrated Micromachined Inductors with Electroplated Anisotropic Magnetic
Cores ................................................................................................................................... 379
J. Park, W. Taylor, M. Allen, Georgia Institute of Technology, Atlanta, GA, and S. Han,
Korea Institute of Science and Technology, Seoul, KOREA
9.2 Add Flux Paths to SPICE’s Analytical Capability Improves the Ease and Accuracy of Simulating Magnetic Power Circuits ................................................................. 386
M. Eaton, Shoreline, WA

9.3 A Novel Behavioral Method of SPICE Macromodeling of Magnetic Components Including the Temperature and Frequency Dependencies ........................................... 393

9.4 Taking into Account all the Parasitic Effects in the Design of Magnetic Components .... 400
R. Prieto, J. Cobos, O. García, P. Alou and J. Uceda, Universidad Politecnica de Madrid, Madrid, SPAIN

9.5 Design of Integrated Magnetic Elements Using Thick-Film Technology .................. 407

9.6 Characteristics and Design of a Current Sensor Using Multilayer Co/Ni Structures ...... 414

9.7 Phase Error Compensation Method for the Characterization of Low-Power-Factor Inductors Under High-Frequency Large Signal Excitation .................................... 420
W. Chen, L. Ye, D. Chen and F. Lee, Virginia Power Electronics Center (VPEC), Blacksburg, VA

Wednesday, February 18 - North Ballroom B, 8:30 a.m. - 12:00 p.m.
SESSION 10: Single-Phase PFC: Applications .......................................................... 425
Chairman: Jim Walker, Consultant, San Diego, CA

10.1 Principle of Synthesizing Single-Stage Converters for Off-Line Applications .......... 427
T.-F. Wu, T.-H. Yu and Y.-C. Liu, National Chung Cheng University, Chia-Yi, TAIWAN, R.O.C.

10.2 Integrated AC/DC Converter with High Power Factor ........................................ 434
S. Korotkov, V. Meleshin, R. Miftakhutdinov, A. Nemchinov, Moscow State Aviation Institute, Moscow, RUSSIA, and S. Fraidlin, Bell Laboratories, Lucent Technologies, Mesquite, TX

10.3 Improving Dynamic Response of Power Factor Correctors By Using Series-Switching Post-Regulator ................................................................. 441
J. Sebastián, P. Villegas, M. Hernando, Universidad de Oviedo, Gijón, SPAIN, and S. Ollero, ALCATEL ESPAÑA, Madrid, SPAIN

10.4 Influence of Diode Reverse Recovery on the Operation and Design of High Frequency Rectifiers ................................................................. 447
L. Karadzinov, St. Cyril and Methodius University, Skopje, MACEDONIA, and D. Hamill, University of Surrey, Surrey, ENGLAND

10.5 An Economical Single-Phase Passive Power-Factor-Corrected Rectifier: Topology, Operation, Extensions, and Design for Compliance ................................. 454
R. Redl, ELFI S.A., Onnens, SWITZERLAND
10.6 Input Current Shaper Based on the Series Connection of a Voltage Source and a Loss-Free Resistor
J. Sebastián, M. Hernando, P. Villegas, J. Díaz, Universidad de Oviedo, Gijon, SPAIN, and A. Fontan, ALCATEL ESPAÑA, Madrid, SPAIN

10.7 Power Factor Correctors Based on Coupled-Inductor Sepic and Cuk Converters with Nonlinear-Carrier Control
N. Jayaram and D. Maksimovic, University of Colorado, Boulder, CO

Wednesday, February 18 - Embassy Ballroom, 8:30 a.m. - 10:15 a.m.
SESSION 11A: Manufacturing Systems and Technologies
Chairman: Bob Huljak, Lucent Technologies, Mesquite, TX

11A.1 Designing and Manufacturing a Compact KW-Dissipation Power Supply Using a New Copper on Ceramic Interconnect Technology
L. Balents, J. Morrison, D. Skoczylas, Varity Zecal, Churchville, NY, R. King, International Rectifier, Carolina Beach, NC

11A.2 Microprocessor Bus Terminating Techniques - A Power Delivery Perspective
R. Taylor, Celestica, Inc., North York, Ontario, CANADA

11A.3 Manufacturing and Cost Analysis of Power-Factor-Correction Circuits
B. Sharifipour, J. Huang, P. Liao, Delta Electronics, Inc., Chungli, TAIWAN, R.O.C., L. Huber and M. Jovanovic, Delta Power Electronics Laboratory, Inc., Blacksburg, VA

11A.4 Using DPMO for Benchmarking Manufacturing Process Yields
G. Mallory, VXI Electronics, Milwaukie, OR

Wednesday, February 18 - Embassy Ballroom, 10:30 a.m. - 12:00 p.m.
SESSION 11B: Power Packaging
Chairman: Jeff Fishbein, The Berquist Company, Edina, MN

11B.1 Extraction of Parasitics within Wire-Bond IGBT Modules
K. Xing, F. Lee and D. Boroyevic, Virginia Polytechnic Institute and State University, Blacksburg, VA

11B.2 Power Packaging of a 12 kV, 240°C Passive Electronic Module
J. Bowers, Custom Electronics, Inc., Oneonta, NY, D. Hopkins, State University of New York, Binghamton, NY, and W. Sarjeant, State University of New York, Buffalo, NY

11B.3 A New Packaging Scheme for High Current Sealed Power Supplies
N. Kutkut, J. Wohlbier, R. Gascoigne and D. Divan, Soft Switching Technologies Corporation, Middleton, WI

11B.4 A Novel Approach to High Current Hermetic Packaging
D. Morozowich, Powerex, Inc., Youngwood, PA
