AHMEDABAD BANGALORE HYDERABAD LUCKNOW
CONTENTS

Vol - I

Technical Committee v
Main Sponsors/Collaborators/Co-Sponsors/Participating Organisations vii
Preface ix

Session 1A: – HVDC Transmission

Effects of Parameter Variation on HVDC System Control Stability 3
– R. K. Pandey, Sachchidanand and Arindam Ghosh

Design and Development of Active Filters for HVDC Transmission Systems 9
– P. B. Duttagupta

A Critical Appraisal of the Location of Back to Back HVDC Station in an AC System 14
– Premila Manohar and H. S. Chandrasekhariah

Technologies for Advanced Transmission Systems 21
– K. W. Renz and H. K. Tyll

A Novel Approach on UHVDC 800 KV Station And Equipment Design 26
– G. Asplund, U. Áström, A. Canelhas, M. Åberg, E. Purra and O. Heyman

Back to Back HVDC Links – Some Aspects of their Application and Design 32
– Matt. L. Matele and Mata Prasad

Upgradation of AC and DC Filters in Stage-II of the National HVDC Project in India 37
HVDC Back-to-Back Links (> 500 MW): A Comparative Overview
- N. Christl, K. Sadek and A. Mukherjee

Chandrapur HVDC Back-to-Back Interconnection

Session 1B: Power Systems Planning – 1

Demand Side Management In Power Systems: A Perspective and a Case Study
- J. Gopalachar and Sri. Shivanand Mariguddi

A New Approach to Evaluate Generating Systems Reliability
- A. K. Azad and R. B. Misra

Integrating Demand Side Options in Electric Utility Planning: A Multiobjective Approach
- D. Chattopadhyay, R. Banerjee and Jyoti Parikh

Load Shifting in Industry for Utility Peak Demand Management
- Arabinda Mishra and Rangan Banerjee

Load Flow Solution Subgraphs for Power System Network Reliability Analysis
- P. Mahesh, V. Sankar, V. C. Prasad and K. S. Prakasa Rao

New Types of Structures for Power Transmission and their Structural Qualification
- R. Susendran, P. Krishnamurthy, Afsar Ahmed, T. Raghunatha and D. Revanna

A Spot Pricing Scheme Incorporating Unit Commitment Decisions
- Saumen Majumdar, R. Sridhar and Jyoti K. Parikh

Session 1C: Power System Stability

Determination of Power System Equipment for Transient Study
- Santosh Kumar, Ranjan Khanna, B. Das and Sachchidanand

An Incorporation of Field Flux Decay into Transient Stability Analysis of Power System Using Catastrophe Theory
- Sidheshwar Prasad, T. S. Bhatti and S. C. Tripathy

Fast Transient Stability Simulation of Large Scale Power Systems
- R. Sreejana Kumar, R. Ramanujam, H. P. Khincha and L. Jenkins

On Determination of Sliding Parameter in the S-Matrix Stability Analysis
- S. A. Patekar and S. D. Varwandkar
Transient Stability Analysis of Six Phase Transmission Line  
- A. K. Mishra, A. Chandrasekaran and S. S. Venkata

An Approach to Transient Stability Assessment and Identification of Unstable Machines  
- K. K. Sanyal and P. S. Ray

Determination of First Swing Stability Margin  
- P. K. Dwivedi, N. S. Saxena, I. S. Jha and Avinash M. Pavgi

Structure Preserving Energy Function and Stability Boundary: Recent Developments  
- K. R. Padiyar and K. Uma Rao

Session 1D: Expert System Applications

Power-Expert: An Expert System for Fault Diagnosis in a Power Network  
- D. V. Kodavade

Development of Expert System Based Controller for HVDC Systems  
- B. R. Parekh and S. K. Banerjee

Expert Systems for Short Term Load Forecasting  
- T. A. Raghavendiran, A. S. Saleem and David P. Job

Expert Systems Applications in High Voltage Engineering  
- K. P. Dabke, M. F. Conlon, D. B. Giesner and Q. Su

An Expert System for Alleviation of Under-Voltage and Over-Voltage Conditions in Large Power System Operations  
- Bansilal, D. Thukaram, K. Parthasarathy and G. S. Raju

Expert System Based Monitoring, Control and Protection for Power Systems Application  
- Deepak L. Waikar and N. Rajkumar

Session 2A: Flexible AC Transmission Systems

Simulation of Facts Devices  
- D. Povh and R. K. Aggarwal

Enhancement of Multi-Machine Power System Stability  
Using Controlled Series Compensation with Local Feedback Control  
Thyristor Controlled Reactors in Flexible AC Transmission Systems – Part I: Series Compensation

– Arindam Ghosh and Gerard Ledwich

Thyristor Controlled Reactors in Flexible AC Transmission Systems – Part II: Shunt Compensation

– Gerard Ledwich and Arindam Ghosh

Design Aspects of Relocatable SVCS

– K. W. Renz and H. K. Tyll

Session 2B: Power System Planning – II

A Case Study for Evolution of Electrical Islanding Schemes in Gujarat System

– R. B. Mathur, V. Ramakrishna, P. Pentayya, V. A. Murty and R. Varghese

Transmission System Expansion

– Dharma Deo

Application of Fast Transform Techniques to Generate Capacity

Reliability Evaluation of Interconnected Systems

– S. R. Lakshmi, B. Sanjeeva Rao and K. S. P. Rao

Integrated Energy Systems Planning Model for India with Particular Reference to the Power Sector

– S. B. Malik, P. S. Satsangi, R. Balasubramanian and S. C. Tripathy

Prospects for Multi-Circuit and Multi-Voltage, Multi-Circuit Tower Lines in India

– G. Pavithran

A New Probabilistic Formulation for Marginal Cost Pricing of Electricity

– Saumen Majumdar, R. Sridhar and Jyoti K. Parikh

Session 2C: Voltage Stability and Security

Overload Reduction by Line Switching: A PC-based Interactive Simulation

– L. D. Arya, S. C. Choube and D. P. Kothari

Contingency Filters for Dynamic Security Assessment

Using the Transient Energy Function Method

– V. Vittal, V. Chadalavada, G. C. Ejebe and G. D. Irisarri

Voltage Stability Analysis of Typical Indian Systems using a Simple, Fast and Efficient Technique

– R. Raghunatha, R. Ramanujam, K. Parthasarathy, D. Thukaram and G. S. Raju
A New Method for Security-Constrained Active Power Optimization based on Artificial Neural Networks
- Soumen Ghosh and Badrul H. Chowdhury

Dynamic Analysis of Voltage Instability in MTDC System
- K. R. Padiyar and Suresh S. Rao

An Efficient Continuation Power Flow Method for Voltage Stability Analysis
- P. R. Bijwe and R. S. Tare

Dynamics of Large System Voltage Collapse: Prediction and Prevention
- Nicholas W. Miller

Session 2D: Artificial Neural Network Applications

Modelling of Critical Flashover Voltage of Polluted Insulator using Type II Artificial Neural Network
- P. S. Ghosh, S. Chakravorti and N. Chatterjee

An Adaptively Trained Fast Learning Artificial Neural Network for Short Term Load Forecasting
- N. K. Patel and M. S. Charan

Classification of Power System Disturbances through Object-Oriented Neural Network Software
- G. P. Damarla, A. Chandrasekaran and Ashok Sundaram

Short Term Load Forecast using ANN
- S. P. Singh and O. P. Malik

Artificial Neural-Net Based Transient Stability Assessment
- Sushil Chauhan and M. P. Dave

Session 3A: Series and Shunt Compensation Including SVC

Transient Stability Enhancement of Long Distance AC Transmission Lines Incorporating Auxiliary Controlled Static VAR System
- M. P. Dave and Narendra Kumar

Reactive Power Compensation – Operational Performance of 220 KV Pichhore Series Capacitor Station
- Anjali Agarwal, G. P. Chaukiyal, Ganga Agnihotri and Jessy Thomas

EHV Line Reactors in Indian Power Systems – An Appraisal
- H. C. Mital, K. Ramanathan, S. Ramar and V. J. Talwar
Design and Development of an Improved Static VAR Compensator
– B. N. Singh, Bhim Singh and B. P. Singh

Series Vs Shunt Compensation in EHV Network for Voltage Improvement – A Case Study
– P. K. Dwivedi, I. S. Jha, Subir Sen and Ashok Pal

A Novel Static VAR System Control for Damping Subsynchronous Oscillations

Session 3B: Power System Analysis – I

A New Technique for Modelling of Power Systems
– S. Mary Raja Slochanal and K. R. Mohanram

Partially Decoupled Load Flow for Distribution Systems
– M. K. Bhattacharyya and H. Satpathi

Some Studies of Parallel Processing at 400 KV Sub-Station
– Parmod Kumar and Sandeep Soni

Fast Decoupled Power Flow Incorporating Load and Generation Regulating Characteristics
– R. Nagaraja, S. A. Soman, K. Parthasarathy, D. Thukaram, K. Ramanathan and V. J. Talwar

Design and Implementation of a Diakoptic based Distributed Newton-Raphson Loadflow Algorithm
– Gautam Bandyopadhyay, I. Sen Gupta and T. N. Saha

A Low Cost PC based CAD Framework for Power System Studies
– T. K. Nagsarkar and Deepak Kumar Syal

Session 3C: Power System Monitoring

A Novel Digital Two-Rate Energy Meter
– K. P. Basu and Hafizur Rahman

Bi-directional Communication Channel on the 11KV/33 KV HT Power Line
– V. Arunachalam, K. M. Bharati and R. K. Hegde

Optical Instruments Transformers for Current and Voltage
– M. Bjarme and P. M. Johnston

Analysis of Power System Wave Forms under Transient Conditions using Digital Computers
– L. Al-Dabbagh and A. Kalam
Adaptive Interference Cancellation for Data Communication on Power System
- I. Gondal, A. Kalam and L. Xia

Optical Fibre Communication for the Indian Power Sector
- D. K. Chowdhury, A. K. Singh and Asit Som

Intelligent Digital Instrumentation: Encouraging and Achieving an Energy Efficient Industrial Workplace
- Timothy J. Morris

Session 3D: Fuzzy Logic Applications to Power Systems

Fuzzy Logic based Power System Stabilizer
- K. A. EL-Metwally and O. P. Malik

Optimisation and Implementation of a Fuzzy Logic based Power System Stabilizer
- J. Shi, L. H. Herron, A. Kalam and J. Nanda

Power System Problem Solving using Hardware Driven Fuzzy Logic Controller
- B. S. Nagabhushana and H. S. Chandrasekharaih

Fuzzy Control of Static Condenser for Shunt Reactive Power Compensation
- K. R. Padiyar and A. M. Kulkarni

A Fuzzy Expert System for Daily Average and Peak Load Prediction
- P. K. Dash and S. Rahman
