A COLLECTION OF TECHNICAL PAPERS

Part 2

April 20–23, 1998/Long Beach, California
Influence of Impactor Mass on the Damage Characteristics and Failure Strength of Laminated Composite Plates
D. Ambur and H. Kemmerly.................................................................724

Behavior of Compression-Loaded Composite Panels with Stringer Terminations and Impact Damage
D. Jegley.................................................................................................733

The Effect of Intraply Overlaps and Gaps upon the Compression Strength of Composite Laminates
A. Sawicki and P. Minguet.................................................................744

Impact Damage Evaluation of Stiffened Graphite Epoxy Cylinders
M. Triplett, J. Patterson, J. Esslinger, and J. Zalameda........................................755

Session 16 Modal Survey & Model Correlation

Structural Model Update Using a Modal Formulation for Static Flexibility Error
K. Denoyer and L. Peterson.................................................................762

Improving Structural Dynamics Models by Correlating Simulated to Measured Frequency Response Functions
F. Hemez and G. Brown.................................................................772

A Strategy for Meaningful Component Level Modal Survey
B. Nejad, K. Fiorelli, and D. Wright.................................................................783

Free-Suspension Residual Flexibility Testing of Space Station Pathfinder: Comparison to Fixed-Base Results
M. Tinker.................................................................................................792

Evaluating the Effect of Limited Instrumentation on the Updating of Finite Element Models
G. Brown, R. Djellouli, C. Farhat, and F. Hemez.................................................................802

Model Correlation of International Space Station Control Moment Gyroscope
D. Krebs.................................................................................................813

Modal Test and Correlation of the Castor IVA Solid Rocket Motor
J. Mast, D. Graff, and C. Botos.................................................................850

Session 17 Active Control

Nonlinear, Adaptive Control of an Aeroelastic System via Geometric Methods
J. Ko, T. Strganac, and A. Kurdila.................................................................819

Pseudo Feedback Control of Adaptive Gyroscopic Damper for Vibration Suppression
H. Furuya, M. Takahashi, and T. Ohmachi.................................................................830

Fuzzy Control of an Aeroelastic Wing Section
G. Karpouzian...........................................................................................................835

Active Control of the Structural Intensity in Beams Using a Frequency Domain Adaptive Method
A. Pereira, F. Moreira, and J. Arruda.................................................................841

Active Tendon Control of Large Trusses
A. Preumont, Y. Achkire, and F. Bossens.................................................................850

Active Control of Sound Fields from Plates in Flow by Piezoelectric Sensor/Actuator
S. Kim and K. Song...........................................................................................................856

Fuzzy Logic Control for Nonlinear Free Vibration of Composite Plates with Piezoactuators
R. Lee, K. Abdel-Motagaly, and C. Mei.................................................................867

Session 18 Aeroelasticity I

Deformation of a Flexible Wing Using an Actuating System for a Rolling Maneuver Without Ailerons
N. Khot, K. Appa, J. Ausman, and F. Eastep.................................................................876

Aerelastic Analysis of Rolling Maneuvers with Multiple Control Surfaces in Transonic Flight
G. Anderson, R. Kolonay, and F. Eastep.................................................................NA

Implications of External Stores on Static and Dynamic Aeroelasticity of Advanced Aircraft Wings
F. Gern and L. Librescu...........................................................................................................885

Residual Pitch Oscillation (RPO) Flight Test and Analysis on the B-2 Bomber
S. Jacobson, R. Britt, D. Dreim, and P. Kelly.................................................................896

W/D - Withdrawn

N/A - Not Available
Enhanced Partitioned Procedures for Solving Nonlinear Transient Aeroelastic Problems
C. Farhat and M. Lesoinne ................................................................. 912

Aeroelastic Analysis of a Trimmed Generic Hypersonic Vehicle
I. Nydick and P. Friedmann ................................................................. 923

Investigating Transient and Limit Cycle Behaviors of a Nonlinear Structure by Wavelet Transforms
R. Lind, K. Snyder, and M. Brenner ................................................... 942

Session 19 Material Properties and Behavior

Mechanical Characterization of Hybridized 3D Orthogonally Woven Composites
B. Thuruthimattam and N. Naik ............................................................. 953

Characterization and Modeling of the Stiffness and Strength of Angle Interlock Woven Composites
R. Naik, D. Jarmon, and C. Logan ....................................................... 962

The Influence of Curing Stresses on the Extension-twist Coupling
In Pretwisted Composite Laminates
A. Makeev, E. Armanios, and D. Hooke ............................................. 972

Woven Fabric Composites: Developments in Engineering Bounds, Homogenization and Applications
P. Chung and K. Tamma ................................................................. 983

Measurement of Elastic Constants from Axial-Torsional Loading
of Rectangular Polymer Composite Materials
T. Gates, K. Whitely, and S. Bogan .................................................... 994

Effective Hygrothermal Expansion Coefficients for Thick Multilayered Bodies
E. Johnson and N. Rastogi ................................................................. 1005

Molecular Dynamics Study on Mechanical Properties and Fracture in Amorphous Metal
K. Nakatani, A. Nakatani, Y. Sugiyama, and H. Kitagawa ....................... NA

Session 20 MDO Applications I Ocean Ballroom

An Analytical Method for Concept Aircraft Structural Weight and Balance Prediction
P. Eustace ......................................................................................... 1023

Designing Affordable Lightweight Airframes Using Structural Optimization Techniques
M. Droegkamp, K. Dry, D. Koshiba, S. Renze, and A. Wilson .................. 1033

Enhanced Multiobjective Optimization Technique with Application to High Speed Aircraft Design
J. Rajadas, R. Jury IV, and A. Chattopadhyay ........................................ 1044

A Multidisciplinary Design Optimization Approach for High Temperature Aircraft Engine Components
R. Tappeta, S. Nagendra, and J. Renaud .............................................. 1055

Application of Sensitivity Analysis for Optimization of a Satellite Structure
C. Vidal, M. Kataoka-Filho, W. Takahashi, and P. DeSouza .................... 1066

Aerodynamic and Strength Optimisation of a Large Aircraft Wing with Wing Parameter Variations
R. Battoo and J. de Visser ................................................................. 1075

Optimum Multidisciplinary Design and Impact of Bifouling of Hydrofoils
on the Structural Response Characteristics
S. Gangadharan and S. Nagendra ..................................................... NA

Session 21 Probabilistic Approaches I

Assessment of Probability Models Using the Bootstrap Sampling Method
J. Red-Horse and T. Paez .................................................................. 1086

Probabilistic Assessment of Large Structures Under Pressure
A. Shah and C. Chamis .................................................................. 1092

Application of Wavelets and FPI for Stochastic Analysis of Structure
O. Agarwal and S. Pai .................................................................. NA

Efficient Monte Carlo Probability Estimation with Finite Element Response Surfaces
Built from Progressive Lattice Sampling
V. Romero and S. Bankston ........................................................... 1103
Session 22 Intelligent Computational Methods for Structural Design II

98-1829 Co-operative Adaptive Systems in Optimum Structural Design
S. Nagendra

98-1830 Permutation Genetic Algorithm for Stacking Sequence Optimization
B. Liu, R. Haftka, and M. Akgun

98-1831 A Knowledge-based Adaptive Clustering Technique for Neurocomputing Modeling of Structures
P. Szewczyk

98-1832 Applied Neural Networks for Predicting Approximate Structural Response Behavior using Learning and Design Experience
S. Nagendra, J. Laflen, and A. Wafa

98-1833 Application of Fuzzy Sets to Transient Analysis of Space Structures
T. Wasfy and A. Noor

98-1834 Selection of Architecture for Neural Networks Used As Approximators
W. Carpenter and M. Hoffman

Session 23 Space Structures

98-1835 Interaction Between Gravity Compensation Suspension System and Deployable Structure
A. Fischer and S. Pellegrino

98-1836 Folding Concept for Flexible Surface Reflectors
B. Tibbalds, S. Guest, and S. Pellegrino

98-1837 In-orbit Deployment of a High Precision Mesh Antenna System for Space VLBI Mission
M. Natori, T. Takano, A. Ohnishi, and K. Miyoshi

98-1839 Nonlinear Analysis of the Space Shuttle Superlightweight LO2 Tank: Part II—Behavior Under 3g End-of-flight Loads
M. Nemeth, R. Young, T. Collins, and J. Starnes Jr.

98-1840 Effects of Welding-induced Initial Geometric Imperfections on the Nonlinear Behavior of the Space Shuttle Superlightweight LO2 Tank
M. Nemeth, R. Young, T. Collins, and J. Starnes Jr.

Session 24 Panel Flutter

98-1841 The Influence of Curvature on Supersonic Panel Flutter
H. Krause and D. Dinkler

98-1842 High-supersonic/Hypersonic Flutter of Prismatic Composite Plate/Shell Panels
S. Wang

98-1843 A Higher Finite Element Model in Nonlinear Panel Flutter Analysis
R. Udrescu

98-1844 Computation of Nonlinear Viscous Panel Flutter Using a Fully-Implicit Aeroelastic Solver
R. Selvam, M. Visbal, and S. Morton

Session 25 Damping and Viscoelasticity

98-1845 Characterization and Modeling of the Low Strain Amplitude and Frequency Dependent Behavior of Elastometric Damper Materials
C. Brackbill, L. Ruhl, G. Lesieur, and E. Smith
Session 26 Turbomachinery

98-1849 Optimum Placement of Sensors for Vibration Measurements on Turbine Engine Blades
M. Sensmeier and K. Nichol ................................................................. 1315

98-1850 Vibration of a Mistuned Blade-Disk Assembly Using Structurally Damped Beams
J. Turcotte, J. Holkkamp, and R. Gordon ............................................. 1321

98-1851 A Magnetic Suspension and Excitation System for Spin Vibration Testing of Turbomachinery Blades
D. Johnson, O. Mehmed, and G. Brown ............................................... NA

98-1852 Unsteady Cascade Aerodynamics in the Time Domain
D. Gottfried and S. Fleeter ............................................................... 1329

98-1853 Nonlinear Stall Flutter and Dynamic Stress Prediction
S. Fleeter and X. Li ........................................................................... NA

Session 27 High Strain Rate and Impact Testing

98-1854 High Strain Rate Properties of IM7/977-3 Graphite/Epoxy Composite
J. Vinson, J. Focht, and E. Woldesenbet ............................................... NA

98-1855 High Strain Rate Compression Testing of Kevlar 29/Polyethylene Composite
with Very High Fiber Volume Fraction
B. Viswanathan, J. Vinson, and B. Scott ............................................. 1342

98-1856 An Experimental Investigation of Compressive Mechanical Properties of Thermoplastic Polymer
(Poly Ether Ketone Ketone) at High Strain Rates
B. Viswanathan and J. Vinson ............................................................ 1353

98-1857 High Strain Rate Tensile Properties of a Woven Glass Fabric Composite
R. Greenfield, J. Vinson, and H. Telegadas ......................................... 1362

98-1858 Failure Onset in Laminated Glass Units Subjected to Low Velocity Missile Impact
L. Dharani, F. Ji, R. Behr, and P. Kremer ........................................... NA

Session 28 Modeling Composite Behavior

98-1859 Nonlinear Behavior of a Curved Composite Panel with Transverse Matrix Cracks
J. Park and S.-Y. Lee ........................................................................... 1372

98-1860 Three-Dimensional Mixed Variational Micromechanics Model for Textile Composites
A. Roy ................................................................................................ 1383

98-1861 Predictive Capability of a New Mori-Tanaka Micromechanical Model for Particulate Composites
F. Wong and A. Ait-Kadi .................................................................. 1394

98-1862 Dynamic Substructuring of Viscoelastic Structures with Fractional Derivatives Constitutive Relations
A. Wilson, M. Enelund, and L. Josefson ............................................. 1405

98-1863 Three Dimensional Composite Curing Simulations Involving Heat Transfer
H. Poon, M. Ahmad, and S. Koric ..................................................... NA

Session 29 Aeroservoelastic Optimization

98-1864 Aeroservoelastic Interaction Between Aircraft Structural and Control Design Schemes
M. Karpel, M. Idan, and D. Cohen .................................................... 1415

98-1865 Optimal Sensor/Actuator Locations for Active Structural Acoustic Control
S. Pudula, D. Palumbo, and R. Kincaid .............................................. 1424

98-1866 A Study for Simultaneous Optimization of a Viscoelastic Structure and Active Controller
H. Uchida and J. Onoda ................................................................. 1435
