### Part I – MONOGRAPHY

#### Chapter 1
**UNDERWOOD MEMORIAL LECTURE**
A molecular approach to the study of copper and zinc metabolism .............................................. 1–1
I. Bremner

#### Chapter 2
**METALLOPROTEINS AND ENZYMES (I)**
Zn-finger domains in DNA-binding proteins, *(Plenary lecture)* .................................................. 2–1
F.W. Sunderman Jr.

Effects of protein deficiency on metallothionein concentrations in blood cells and plasma of rats .................................................. 2–3
I. Bremner, J.N. Morrison and A.M. Wood

Transport of copper to the rat fetus on ceruloplasmin, albumin and transcuprein .................................................. 2–4
M.C. Linder, S.H. Lee, R.W. Lanceroy and N. Madani

Histochemical and immunocytochemical studies on the intracellular distribution of copper and metallothionein in the developing human liver .................................................. 2–6
C.E. Fuller, M.E. Elmes and B. Jasani

The protective role of metallothionein in copper overload .................................................. 2–8

Transcriptional regulation of caeruloplasmin gene expression in the developing guinea pig liver .................................................. 2–9

#### Chapter 3
**CHROMIUM AND COPPER IN GLUCOSE INTOLERANCE AND ATHEROSCLEROSIS**
Tissue chromium content in diabetes mellitus and coronary artery disease .................................................. 3–1
S. Wallach

The effect of copper deprivation on variables associated with glucose metabolism in men .................................................. 3–2
F.H. Nielsen and D.B. Milne

Chromium requirement is related to degree of glucose intolerance .................................................. 3–4
R.A. Anderson, M.M. Polansky, N.A. Bryden, J.J. Canary and W. Mertz

Trace elements in serum during oral glucose tolerance test .................................................. 3–6
J. Kufčala, J. Havelka, V. Zamrazil and K. Vondra

Chromium interaction with nucleic acids in rat liver .................................................. 3–8
C. Nanzheng, R.A. Anderson, N.A. Bryden, M.M. Polansky and W. Mertz

The importance of trace elements in ischemic heart diseases .................................................. 3–9
D. Meijöner

Studies in copper status and atherosclerosis .................................................. 3–10

Can copper deficiency cause ischemic heart disease? .................................................. 3–11
L.M. Klevay

Interactions between dietary copper and carbohydrates on neuropeptides and neurotransmitters in CNS and adrenals .................................................. 3–13

#### Chapter 4
**ZINC METABOLISM (I)**
Evaluation of human zinc requirements, *(Plenary lecture)* .................................................. 4–1
J.C. King

Development of isotopic methods for the study of zinc metabolism in man, *(Plenary lecture)* .................................................. 4–3
M.J. Jackson and N.M. Lowe
Zinc retention by men and women consuming representative U.S. diets 4–5
J.R. Hunt, L.K. Mullen and G.I. Lykken

Stable isotope studies of experimental zinc deficiency in adult men 4–6

Zinc status in pregnancy: The effect of zinc therapy on perinatal mortality 4–8
S. Jameson, M. Burström and K. Hellsing.

The effects of dietary zinc on human sperm morphology and seminal mineral loss 4–9
C.D. Hunt and P.E. Johnson

Chapter 5
COPPER METABOLISM AND TOXICITY (I)

The significance of copper deficiency in human nutrition and health, (Plenary lecture and Round table Key paper) 5–1
C.F. Mills

Copper-responsive pathology in humans – Clinical study 5–4
I.G. Priev

Copper intake of humans in the GDR 5–7
U. Krause, M. Anke and W. Arnhold

Copper intake in young school children from a highly industrial area in Germany 5–8
M.D. Laryea, B. Schnittert, C. Kersting, P. Herzig, E. Schmidt, M. Wilhelm and I. Lombeck

Liver copper concentration as an estimate of bioavailability from supplemental sources 5–10
C.B. Ammerman, D.R. Ledoux, P.R. Henry and R.D. Miles

Effects of dietary copper and sulfur amino acids on copper homeostasis and selected indices of copper status in men 5–12
D.B. Milne, F.H. Nielsen, and G.I. Lykken

High dietary copper decreases zinc absorption, as determined with the stable isotope 67Zn 5–13
J.R. Turnlund, W.R. Keyes, and H.L. Anderson

Evaluation of superoxide dismutase assays for the routine diagnostic assessment of copper status in blood samples 5–15
E. Herbert, J.N.W. Small, D.G. Jones and N.F. Suttle

Anemia aggravates the severity of copper deficiency in experimental animals 5–16
M. Fields, C.G. Lewis and M.D. Lure

Ultrastructural pathology associated with hepatocellular copper overload 5–18
I. Sternlieb

Serum selenium and copper in chronic cardiac failure 5–21
M. Riley, D. McMaster and D.P. Nicholls

Low serum copper, hepatic viral antibodies and urticaria 5–22
B. Momčilović

Is chronic copper poisoning a sufficient explanation for Indian Childhood Cirrhosis? (Round table Key paper) 5–23
M.S. Tanner and L. Barrow

Chapter 6
IRON METABOLISM (I)

Biochemical indicators of iron status and dietary intakes of adults in Northern Ireland 6–1
J.J. Strain and K.A. Thompson

Iron balance in healthy menstruating women: Effect of diet and ascorbate supplementation 6–2

Synthesis of ferritin by the liver, and its differential control by iron and inflammation in the rat 6–3
M.C. Linder, N. Madani, and C.H. Campbell

Iron metabolism, immune function and susceptibility to infection in undernutrition and refeeding 6–5
M.J. Murray and A.B. Murray

Interactions between zinc, iron and folic acid in the pregnant rat 6–6
I.R. Record, I.E. Dreosti and R.A. Buckley

The role of endogenous fecal excretion in iron homeostasis as evaluated by radioisotope dilution technique 6–7
M. Kreuzer and M. Kirchgefner

Chapter 7
IODINE AND SELENIUM METABOLISM (I)

The international public health significance of iodine deficiency, (Plenary lecture and Resource paper at PreTEMA IUC academic course) 7–1
B.S. Hetzel

The roles of selenium in thyroid hormone metabolism (Plenary lecture) 7–3
J.R. Arthur, F. Nicol and G.J. Beckett

Iodine content in foodstuffs and iodine intake of adults in central Europe 7–6
B. Groppel and M. Anke
Dietary selenium intake of Australian preschool children

C. Reilly, C. Greaves, C. Patterson and U. Tinggi

Northern Ireland: Another low selenium area?

Effects of chemical forms and selenium intake on its distribution in blood and urine fractions in humans

Y. Xia, X. Zhao, L. Zhu and P.D. Whanger

Glutathione peroxidase (GPX) activity and plasma selenium in the preterm baby during the first 10 weeks of life.

T.R.J. Tubman, H.L. Halliday and D. McMaster

Selenium balance in preterm infants on cow's milk formula

I. Lombeck, F.D. Manz, L. Diekmann and G.J. Stock

Antioxidizing then paradoxal prooxidizing effect of selenite supplementation in phenylketonuric (PKU) children

A. Favier, B. Wilke, J. Arnaud, M.J. Richard, V. Ducros and M. Vidalheth

Chapter 8
BORON METABOLISM

No effect of boron on bone mineral excretion and plasma sex steroid levels in healthy postmenopausal women

H. Peace and J.H. Beattie

Boron and other elements in relation to rheumatoid arthritis

J.M. Havercroft and N. I. Ward

The role of boron in human and animal health

R.E. Newnham

Chapter 9
CHELATION OF TRACE ELEMENTS (I)

Metabolic basis for the impaired copper status after ascorbic acid supplementation in rats

G.J. Van den Berg and A.C. Beynen

Effect of intravenous tetrathiomolybdate on biliary copper excretion in cattle

S.R. Gooneratne and D.A. Christensen

Effect of thiamine and EDTA on biliary and urinary lead excretion in sheep

A.A. Olkowski, S.R. Gooneratne and D.A. Christensen

Chapter 10
TRACE ELEMENTS BIOAVAILABILITY (I)

Effect of zinc and selenium of the diet on the body composition

R.C. deAngelis, G.G. Giuli, R.N. Rogano and J.H. Scialfa

Bioavailability of zinc from lupin products

D.S. Petterson, A.J. Evans, A. Cederblad and B. Sandström

In vitro and in vivo methods for the determination of iron availability from breakfast meals

M.P. Vaquero, C.J.A Van den Hamer and G. Schaanfsma

The effect of dietary fiber on trace elements availability from food – An in vitro study

O. Gadi, M. Tekes, P. Major, K. Milotay and A. Gergely

Phytate: Analysis in food by $^{31}$P FT NMR spectroscopy and its importance as trace element chelating agent

N.K. Aras, A. Ersoz and H. Akgüin

Factors influencing the plasma levels of copper, zinc and selenium in girls aged 15–18 years

E. Morawa and A. Gergely

Chapter 11
TOXICITY AND ESSENTIALITY OF TRACE ELEMENTS (I)

Age and sex influence the metabolism and toxicity of metals, (Plenary lecture and Round table Key paper)

K. Kostial, M. Blanuša, T. Majljuvić, B. Kargačin, M. Piašek, B. Momčilović and D. Kello

The essentiality of the toxic elements cadmium, arsenic, and nickel, (Plenary lecture and Round table key paper)

M. Anke, B. Groppel and U. Krause

The essentiality of the toxic elements aluminium and vanadium, (Plenary lecture and Round table key paper)

M. Anke, B. Groppel and U. Krause

Pre-treatment with zinc delays the onset of cadmium induced nephropathy in the rat

E. Aughey, G.S. Fell and R. Scott

The influence of some cadmium binding organic components of the diet on the intestinal resorption and deposition of the element in the rat

W.E. Kollmer and G. Jackl

Manganese (Mn) balances in preterm infants

E. Sievers, M. Kollmann, H.-D. Oldigs, K. Dörner and J. Schaub
Measurement of intestinal absorption of inorganic and organic cobalt .......................................................... 11-16
E. Werner and Ch. Hansen

Heavy elements in root tips from teeth with amalgam fillings ................................................................. 11-18
E. Johansson and T. Liljefors

Lead deficiency in swine .................................................................................................................................. 11-20
M. Kirchgeßner, D.L. Plass and A.M. Reichlmayr-Lais

Lead deficiency: Newer results ......................................................................................................................... 11-21
A.M. Reichlmayr-Lais, K. Eder and M. Kirchgeßner

Chapter 12
TRACE ELEMENTS IN HEALTH AND DISEASE (I)

Trace element research in the USSR, (Plenary lecture) .................................................................................. 12- 1
A.P. Avtsyn, M.A. Rish and B.A. Yagodin

Use of a $^{64}$Cu loading test in the diagnosis of diseases involving the Cu metabolism .................................. 12- 6

Zinc, selenium and lipid peroxides levels in hemodialysed patients ......................................................... 12- 7
M.J. Richard, J. Arnaud, K. Sirajeddine, F. Kuentz, M. Foret and A. Favier

A role for zinc in the regulation of tumour cell growth through an effect on lipid peroxidation ............ 12- 9
J.R. Duncan, N.S. Sheef and A.R. MacDonald

The effect of acute Lupinosis on selenium and a-tocopherol concentrations, glutathione peroxidase activity and lipid peroxidation in liver from sheep ................................................................. 12-11
N.D. Costa, S.A. Beeton, G.M. Smith and J.G. Allen

On the role of macro- and microelements in the development of the initial dislipoproteinemia ........... 12-13
V.L. Suslihov and R.V. Stepanov

Micronutrient status and the immune response in ruminants ..................................................................... 12-14
A. MacPherson, E.G.W. Ferguson and G.B.B Mitchell

The effect of interrelationships between silicon, aluminum, and the thyroid on zinc content in brain ... 12-16
E.M. Carlisle, M.J. Curran and T. Duong

Chapter 13
HUMAN TRACE ELEMENT DIETARY REQUIREMENTS AND INTAKE

The reevaluation of human trace element requirements by WHO/FAO/IAEA, (Plenary lecture and Resource paper at the preTEMA IUC academic course) ................................................................. 13- 1
W. Mertz

Dietary intakes of trace elements and related nutrients in eleven countries: Preliminary results from an International Atomic Energy Agency (IAEA) co-ordinated research programme ........................................ 13- 3

Zinc and copper intakes and status of French population (Val-de-Marne 1988 Survey) ......................... 13- 5
A. Favier, S. Herbergh, J. Arnaud, P. Preziosi and P. Galan

Zinc content in foodstuffs and zinc intake of adults in central Europe ......................................................... 13- 7
M. Anke and U. Krause

Dietary intake of some essential elements in Sweden and Yugoslavia ....................................................... 13- 8
M. Blanusa and L. Johem

Molybdenum content in foodstuffs and molybdenum intake of adults in central Europe ...................... 13-10
M. Anke, E. Lisch, W. Arnhold and B. Groppel

Chapter 14
HUMAN TRACE ELEMENT REQUIREMENTS AND INTAKE IN THIRD WORLD COUNTRIES

Environmental iodine and iodine status in adolescent girls and the new-born in an endemic extra-Himalayan area in India, (Plenary lecture and Resource paper at the preTEMA IUC academic course) ......................... 14- 1
K.A.V.R. Krishnamachari

Assessment of trace element intakes of children from developing countries, (Resource paper at the preTEMA IUC academic course) .................................................................................................. 14- 3
R.S. Gibson

The detection of trace element deficiencies in the Third World, (Resource paper at the preTEMA IUC academic course) .................................................................................................................................. 14- 5
B.E. Golden and M.H.N. Golden

Metabolic studies of zinc nutrition in the Third World, (Resource paper at the preTEMA IUC academic course) .................................................................................................................................. 14- 7
M.J. Jackson

Dietary induced zinc deficiency in children from Papua New Guinea (PNG) and Malawi consuming plant-based diets ................................................................................................................................. 14- 8
R.S. Gibson, E.L. Ferguson, A. Heywood and P. Heywood.

Zinc absorption in malnourished children ...................................................................................................... 14-10
B.E. Golden and M.H.N. Golden

xiii
Chapter 15
TRACE ELEMENT DIETARY REQUIREMENTS AND SUPPLEMENTATION IN ANIMALS (I)

Cumulative Cu poisoning in animals and man, (Plenary lecture and Round table Key paper) .......... 15–1
J. McC. Howell

Trace element research in ruminants in Malaysia, (Resource paper at the preTEMA IUC academic course) . 15– 4
J. McC. Howell

Identifying mineral deficiencies in grazing sheep in northern China, (Resource paper at the preTEMA IUC academic course) ......................................................... 15–5

The use of a multiple trace element and vitamin bolus in cattle under conditions of low selenium or low copper status .................................................. 15–8
D.C. Lawson, N.S. Ritchie and J.J. Parkins

Retention by growing lambs of dietary copper given as either copper sulphate or a copper proteinate ... 15–9
R.G. Hemingway

Copper oxide particles as an oral copper supplement: The retention of wire particles in the alimentary tract of sheep .................................................................................. 15–10
G.J. Judson, P.J. Babidge, T.H. Brown, A.B. Frensham J.P. Longlands and G.E. Donald

A multiple trace element and vitamin sustained release bolus for cattle ........................................ 15–12
N.S. Ritchie, D.C. Lawson and J.J. Parkins

Effect of dietary copper and zinc on zinc binding to a2-macroglobulin in three breeds of pregnant sheep maintained indoors .................................................. 15–14
S.R.R. Rao and W.H. Parry

Trace elements in soil-plant-animal system related to the nutrition of dairy cattle ............. 15–15
M. Božič, A. Hodnik and S. Lapajne

Chapter 16
ANALYTICAL METHODS (I)

Electron probe microanalysis of some metals in cells and tissues ........................................... 16–1
K. Augsten, W. Gutsche and G. Stein

Inductively coupled plasma source mass spectrometry for the determination of platinum in animal tissues .................. 16–2
P. Tothill, L.M. Matheson, K. McKay and J.F. Smyth

The determination of lithium in blood serum by inductively coupled plasma mass spectrometry .................. 16–4
F.R. Abou-Shakra and N.I. Ward

The use of nuclear analytical techniques in trace element research ........................................ 16–5
V. Valković

Part II – PROCEEDINGS

Chapter 17
METALLOPROTEINS AND ENZYMES (II)

Lead binding to metallothionein in human erythrocytes .................................................. 17–1
H.J. Church, J.P. Day, R.A. Braithwaite and S.S. Brown

Relationship of the rapidly exchanging zinc in the liver to metallothionein .................. 17–2
N.M. Lowe, I. Bremner and M.J. Jackson.

The presence of Hg-Zn-Cu-thionein in rat brain .................................................. 17–4
I. Falnoga, M. Škrebliñ, N. Prosenc and P. Stegnar

Hepatic ceruloplasmin and metallothionein gene expression in the toxic milk mouse .................. 17–5
J.F.B. Mercer, A. Grimes, D.M. Danks and H. Rauch

A histochemical and immunocytochemical study of copper and metallothionein in copper loaded rat liver and kidney .................................................. 17–6
W. Evering, S. Haywood, M.E. Elmes, B. Jasani and J. Trafford

Histochemical localization and quantification of copper-thiolate clusters as a measure of metallothionein in the rat. .................................................. 17–7

Isolation and characterization of rat transcuprein .................................................. 17–8
M.C. Linder, M.-T. Tsai and C.T. Dinh

On the histamionolytic role of ceruloplasmin (EC 1.16.3.1) – A Cu-enzyme .................. 17–10
G.Bertoni, F.P. Cappelli, L. Calamari and A. Galimberti

The involvement of sulfhydryl in the absorption of selenite .................................................. 17–11
P.D. Whanger, S.C. Vendeland, J.T. Deagen and J.A. Butler

Nickel effects on glutathione metabolism .................................................. 17–12
J. Cartañá, C. Bladé, A. Romeu, L. Arola and A. Mas

Prevention of nitrite effect by selenium and vitamin C in diets. Pilot experiment in rats .................. 17–14

xiv
Aluminum enhances calmodulin activity
N.E. Johnson, C. Zierold and M.A. Dunn
The activity of methylmalonyl CoA mutase and methionine synthase in cobalt deficient sheep
D.G. Kennedy, A. Cannavan, A. Molloy, S. Kennedy and W.J. Blanchflower
Biochemical changes induced by nitrous oxide in the pig
D.G. Kennedy, A. Molloy, S. Kennedy, J. M. Scott W.J. Blanchflower and D.G. Weir
Production and absorption of succinate in cobalt deficient sheep
D.G. Kennedy, P.B. Young, W.J. McCaughey and W.J. Blanchflower
Erythrocyte fatty acids, serum copper and zinc in a group of men aged 45 to 64 years
Cobalt-hemiporphrazines as model of naturally cobalt-containing biomolecules
A. Marzotto and D.A. Clemente
Demonstration of a high affinity vitamin B12 binder in cattle plasma and its relevance to problems in assessing cobalt/vitamin B12 status in the bovine.
J. Price.
Effect of nitrous oxide on vitamin B12 dependent pathways in the sheep
†A.M. Snoswell, W.J. Babidge and L.E. Mather
Effect of dietary Zn deficiency induced free radical production on the stability of microsomal cytochrome P-450 enzyme system in rats
Z.M. Xu and T.M. Bray
Selenium and glutathione–enzymes levels in alcoholics
T. Westermarck, H. Musalo-Rauhamaa, P. Kärkkäinen, K. Poikolainen, J. Lehto and F. Atroshi

Chapter 18
GLUCOSE TOLERANCE AND LIPOPROTEINS
The effects of high-chromium yeast supplementation on serum lipid of adults
G.R. Jiang, N.Z. Cheng, M.F. Zhang and X.Y. Xu
The isolation of glucose tolerance factor (GTF) from brewers yeast and their relationship to chromium
M. Simonoff, D. Shapcott and S. Alameddine
The relationship between blood copper and zinc serum cholesterol and triglyceride levels in Pakistan
W.W.T. Manser, S. Haider, R. Lalani and M.A. Khan
Influence of moderate zinc depletion on lipoprotein and essential fatty acid composition in the pregnant rat: Comparison with non-pregnant controls
S.C. Cunnane and Z.-Y. Chen
Zinc and g-linolenic acid effects on melanoma growth
J.R. Duncan and D.M. Perkins
Changes of platelet fatty acid composition in zinc deficient rats
P. Faure, A.M. Roussel and A. Favier.
Glycerophospholipid synthesis in zinc-deficient rats
P.I. Oteiza and C.L. Keen

Chapter 19
ZINC METABOLISM (II)
Zinc absorption in man: use of a plasma response curve
J.M. Round, T.B. Weir, D.A. Jones and M.J. Jackson
The effect of insulin on serum zinc levels in normal volunteers
The effect of oral zinc administration on serum glucose, insulin and glucagon levels in normal volunteers
Mineral metabolism in zinc-deficient rats
Y. Teraki and A. Uchiumi
Effects of hypercaloric or restricted diet during pregnancy on the utilization of zinc in rats
P. Vaguer, T. Duarte and P. Navarro.
Zinc-65 absorption and its turnover in young and adult mice under supply of zinc deficient diet
N. Matussaka and Y. Nishimura
Ontogeny of iron and zinc absorption in the rat
A. Flynn and M.M. Brennan,
Influence of zinc on erythrocyte protoporphyrin and zinc protoporphyrin ratio
P. Bulat, M. Bogdanović, A. Vidaković, B. Stanišić and Z. Medigović
Copper and zinc interreaction in human organism
M. Bogdanović, P. Bulat, A. Vidaković and B. Stanišić
Plasma zinc, copper, caeruloplasmin, selenium, ferritin and red blood cell manganese concentrations in patients with kwashiorkor in the acute stage and during recovery
H.deV. Heese, A.A. Sive, W.S. Dempster, E. Subotsky and H. Malan
Protein energy malnutrition: selenium, glutathione peroxidase and glutathione in children with acute kwashiorkor and during refeeding .......................................................... 19–15
A. A. Siwe, H. de V. Heese, W. S. Dempster, E. Subotsky, H. Malan and R. Sachs

Clinical zinc deficiency state in the desert urban boys. A preliminary study ......................................................... 19–17
A. Mathur, N.K. Surya and K. Banerjee

High serum-, urine-, and hair-zinc in Dutch boys with poor growth ........................................... 19–18
J.P. Van Wouwe and G.-J. Van den Berg

Chapter 20
COPPER METABOLISM AND TOXICITY (II)

Copper zinc superoxide dismutase in developing guinea pig liver is not regulated by hepatic copper levels ........................................ 20–1
C.D. Bingle, O. Epstein and S.K.S. Srai

Effects of copper deficiency on rat salivary gland morphology and secretory enzymes .................................................. 20–2
B.F. Harland, R.W. White, R.S. Redman and M. Fields

Copper uptake by hepatocytes from albumin's specific copper binding site .................................................. 20–3
H.J. McArdal, S.M. Gross, and D.M. Danks

Some aspects of copper metabolism in isolated liver parenchymal cells isolated from nutritionally copper-deficient rats ........... 20–4
G.J. Van den Berg, H.P.J. Hendriks, A. Brouwer and K.Y. Lei

The importance of copper in the organogenesis in animal experiments – Preliminary study .................................................. 20–5
I. Villa-Elizaga, F. Allende-Gonzales and M. Sarricolea.

Pathogenesis of copper-induced injury in the livers of Bedlington Terriers .................................................. 20–6

Chapter 21
IRON METABOLISM (II)

Different iron supplementation regimens and their effectiveness in improving the iron status of anaemic rats .......................................................... 21–1
S. Southon and A.J.A. Wright

Iron requirement of growing rabbits on different diets .......................................................... 21–2
J. Palluf and D. Bock

The influence of uranium on the gastrointestinal uptake of ferric iron .......................................................... 21–3
G. Perewuśnyk, P. Bläuenstein, F. Funk and W. Burkart

Iron metabolism in vitamin A deficiency .............................................................................................. 21–5
A.C. Beynen, K.W. Sijamtsa, G.J. van den Berg, A.G. Lemmens and C.E. West

Pregnancy zinc and copper status is not depressed by iron administration .................................................. 21–6
W.T. Binnerts, M. Stoeel and L.M. Begheijn

The influence of maternal iron status on the accumulation of cadmium in human placenta ........... 21–7
A. Moberg Wing, K.R. Wing, G. Hallmans, K. Tholin and R. Sjöström

Chapter 22
IODINE AND SELENIUM METABOLISM (II)

Trace amounts of iodine in some human and animal foodstuffs determined by rapid radiochemical neutron activation analysis .............................................................................................. 22–1
M. Dermelj, V. Stibilj, J. Stekar and P. Stegnar

Pharmacokinetics of selenium ........................................................................................................ 22–2
V. Meisenger, S. Steiner, P. Sagaster and O. Jahn

Selenium status of renal dialysis patients ...................................................................................... 22–4
P.F. Miller, J.P. Day and P. Ackrill

Selenium status of soils, grain and human population in Yugoslavia .................................................. 22–5
Z. Maksimović, I. Djukić, M. Ršumović and V. Jović

Selenium and aluminium in Hungarian nutrition ................................................................................. 22–6
A. Gergely, M. Teker, M. Milatay and Gy. Biró

Selenium binding and uptake by brush-border membrane vesicles of rat small intestine ........... 22–7
S. Ciappellano, F. Brighenti, M. Porrini and G. Testolini

Effect of selenium on H2O2 and UVB induced toxicity in diploid human fibroblasts ........... 22–9
M.J. Richard, S. Rachida Cadi, J. Arnaud, A. Favier and P. Amblard

Study on the bioavailability of selenium in rats after intake of selenite and selenomethionine in normal or large doses ........... 22–10
D. Behne, A. Kyriakopoulos, S. Scheid and H. Gföñer

Chapter 23
ALUMINIUM METABOLISM

Multielement tissue status of sows exposed to aluminium in North Cornwall as a result of the Lowermoor Water Treatment Work incident .......................................................... 23–1
N.I. Ward
Chapter 24
CHELATION OF TRACE ELEMENTS (II)

Treatment of subjective central nervous symptoms with intravenous CaNa$_2$-EDTA-injections
W. Blumer

A method for simultaneous measurement of $^{203}$Pb and $^{201}$Tl in mice given the metals alone or together with sodium pyridinethione.
J. Gottofrey and H. Tjalve

The influence of age on the ability of dithiocarbamate analogs to reduce cadmium retention in rats
B. Kargacin, R. Arezina, K. Kostial and M.M. Jones

The effect of oral chelation therapy with DMPS, DMSA or ZnDTPA on retention of ingested $^{203}$Hg in rats
R. Arezina, B. Kargacin, K. Kostial and M. Landeka

Anticonvulsant-induced changes in brain regional metal content
R.W. Hurd, B.J. Wilder, A.M. Kinyua and H.A. Van Rinsvelt

cis-Diamminedichloroplatinum treatment and trace element metabolism in rats fed different amounts of dietary zinc and copper
P.G. Reeves and K.L. Nelson

> In vitro cytostatic activity of tin dithiocarbamates.
V. Cherchi, G. Fracasso, D. Marton, L. Sindellari, S. Sitran, C. Preti, A. Furlani and V. Scarcia

Elevation of serum osteocalcin by desferrioxamine in aluminium overload

Chapter 25
TRACE ELEMENTS BIOAVAILABILITY (II)

The effect of individual dietary components on manganese absorption in man
L. Davidsson, A. Cederblad, B. Lönnerdal and B. Sandström

Trace element bioavailability from infant formulas based on protein hydrolysates
B. Lönnerdal and C. Glazier

Determination of trace elements in milk samples
I.A. Ashur, N.N. Dogadkin, W.M. Markus and A.H.M.A. Hannan

Trace element composition of breakfast cereals: Assessment of dietary intake status
J.K. Kang and N.I. Ward

The influence of calcium, copper and zinc content of a rapeseed diet on growth and organ deposition in rats
T. Larsen and B.O. Eggum

Iron availability in pregnant rats consuming a used frying olive oil
A.M. Pérez-Granados, P. Vaquero and M.P. Navarro.

The interrelationship of minerals and fats in the Australian diet
S.J. Record and K.I. Baghurst

Methods for determining the minerals available for absorption in the small intestine and colon
L. U. Thompson, T. P. Trinidad and D. J. A. Jenkins

In vitro dialysability of zinc and copper from breakfast meals
M.P. Vaquero, W. Van Dokkum and G. Schaafsma

Zinc availability from zinc-supplemented heat-treated egg albumin in growing rats
E. Weigand, C. Minne and O.P. Walz

Distribution of trace elements in unhulled rice using particle induced X-ray emission (PIXE) analysis
M. Yukawa, M. Sumiya and T. Furuse

Absorption of zinc by rats from foods intrinsically and extrinsically labelled with the stable isotope $^{67}$Zn
S.J. Fairweather-Tait, T.E. Fox, J. Eagles and S.G. Wharf

New data on levels of vanadium in man and his diet
A.R. Byrne and J. Kucera

Complexation properties of phytate with selected cation in vitro
D. Oberleas and H-C. Chan.
Chapter 26
TOXICITY AND ESSENTIALITY OF TRACE ELEMENTS (II)

On the regularities of the formation of animal diseases in the biogeochemical provinces and biosphere subregions
V.L. Suslihov

Lead exposure and kidney effects in smelter workers

Lead body burden and late kidney impairment
N. Restek-Samarzija and B. Momčilović

Liver iron after lead exposure of mother and pup rats
M. Piasek, M. Blanuša, T. Malićković and K. Kostial

Cadmium and lead retention in rats fed liver meal
H. Schenkel and M. Lee

Heavy metals in fish barbus barbus l. and leuciscus idas l. in the Sava river
N. Kralj-Klobucar, L. Ožbolt, I. Ursić and Ž. Lukša

Relations between the cadmium content of soil, plant, animals and humans
M. Anke, B. Gropbel, M. Grobn and H. Kronehemann

Effect of fasting on acute oral metal toxicity in growing rats
T. Malićković, B. Karagaćin and K. Kostial

Influence of zinc in the diet on cadmium retention in rats

Accumulation of cadmium in the sheep

The relationship between cadmium in whole kidney and kidney cortex
H.G. Masters and D.S. Petterson

Anemia and Cd tissue accumulation as a function of growth rate in young rats after short-term dietary exposure to low toxic Cd concentrations
K. Schümann, P. Friebel, G. Schmolke, B. Elsenhans, S. Schäfer and W. Forth

The effects of chronic doses of dietary cadmium on macro-element balance in wood mice and bank voles

Chromatographic analysis of the soluble 109Cd and 65Zn binding compounds of the intestinal contents and the feces of the rat
G.A. Jackl and G. Reidel

Renal and testicular ultrastructure in rats made hypertensive by long-term mercury exposure

Histochemical and quantitative determination of mercury in rats exposed to elementary mercury
N. Kralj-Klobucar, M. Škrebli, I. Fuhoga and P. Stegnar

Plasma manganese levels in the very low birth weight infant
D.C. Wilson, T.R.J. Tulbman, H.L. Halliday and D. McMaster

Manganese levels in the mother and infant in Northern Ireland
D.C. Wilson, T.R.J. Tulbman, H.L. Halliday and D. McMaster

Net and true retention of manganese in homeostatic response to dietary manganese supply in Broiler chicks
E. Weigand and M. Kirchgéfner

Toxicological and mutagenic effects of manganese
M. Eger, R. Rozgaj and N. Horš

Fluorine deficiency in goats
M. Anke, B. Gropbel and U. Krause

Effect of boron on bone metabolism in rats
J.H. Beattie and A. MacDonald

Chapter 27
TRACE ELEMENT SOIL-PLANT-ANIMAL RELATIONSHIPS

Blood mineral profiles of cattle with »dissi-dimi« in the Sahel region of Mali, West Africa
R.L. Kincaid, B. Kouyate and S.M. Dennis

Mineral status comparisons of goats in Florida, emphasizing zinc deficiency

Trace mineral status of grazing cattle in South Sulawesi, Indonesia
A. Prabowo, L.R. McDowell, N.S. Wilkinson, C.J. Wilcox and J.H. Conrad
Chapter 28

TRACE ELEMENTS IN HAIR, NAILS AND SALIVA

Intestinal resorption of cadmium in the monkey and its reflection in hair ........................................... 28–1
D. Berg

Trace elements in the nails: A longitudinal study ................................................................................. 28–2
B. Momčilović, N. Ivić, M. Blanusa and K. Sega

Element content of children’s scalp hair and saliva in assessing reading development ......................... 28–4
N.I. Ward and A.E. Ward

Chapter 29

TRACE ELEMENTS IN HEALTH AND DISEASE (II)

Deficit of trace elements in some pathologies ......................................................................................... 29–1
S. Zago, L. Gallitelli, F. Giacchetti, G. Testolin, A. Alberio, F. Brighenti and S. Ciappellano

Effect of parenteral zinc supplementation on zinc metabolism in surgical patients ............................... 29–3
H. Faure, J.C. Peyrin, M.J. Richard and A. Favier

Alterations in the level of trace elements in acute appendicitis versus appendicectomy ......................... 29–4
D. Khalifa, H. Youssef, H. Al-Sayer, N. Al-Awadi, M. Abdulla, J.T. Christenson and H. Dashti

Selenium status and absorption of zinc (65Zn), selenium (75Se) and manganese (54Mn) in patients with short bowel syndrome ................................................................. 29–5
B. Sandström, L. Davidsson, I. Bosaeus, R. Eriksson and M. Alpsten

Normal ranges for blood copper, zinc and magnesium in Pakistani adults and children and various levels associated with lead in policemen and soldiers ............................................. 29–7
W.W.T. Mansser, S. Haider, R. Lalani, M.A. Khan and S. Zuberi

Vanadium and aluminum levels in chronic renal insufficiency .............................................................. 29–8

Vanadium distribution in blood components of renal patients .............................................................. 29–9

The differences in the elemental content of blood serum in relation to skin diseases ............................ 29–10
F.R. Abou-Shakra, N.I. Ward and J.C.M. Stewart

Environmental arsenic and skin toxicity ................................................................................................ 29–11
J.L. Valentine, R.G. Bennett, M.E. Borok, and B. Faraji

Optimal fluoride concentrations in the drinking water – An initial pathological effect ........................... 29–13
D. Gorgev, Lj. Neceva and M. Carcev

Suboptimal and excessive amounts of fluorides in the drinking water – Some pathological consequences 29–14
D. Gorgev, M. Carcev and Lj. Neceva

Chapter 30

TRACE ELEMENTS IN GENETICS, ENDOCRINOLOGY AND CALCIUM METABOLISM

Strain-dependent differences in copper accumulation and excretion upon dietary and parenteral copper loading in the rat ........................................................................................................ 30–1
J.H.H. Verheesen and H. Nederbragt

The utility of DNA markers in screening for affected siblings in Wilson’s disease pedigrees .................. 30–2
V. Yuzbasian-Gurkan and G.J. Brewer

Oxidative free radical genotoxicity and micronucleus formation in cultured murine splenocytes ........ 30–3
L.E. Dreosti, I.R. Record, E.J. Patrick and J. Turner

Trace metals and endocrine studies – their role in male infertility ......................................................... 30–4
R. Scott and M.J. Speakman
Calcium absorption in the colon of man .......................... 30– 5
L.U. Thompson, T.P. Trinidad and T.M.S. Wolke

Zinc and calcium deficiency and the concentration of calcitonin, parathyroid hormone and
25-hydroxy vitamin D3 ........................................... 30– 6
H.-P. Roth and M. Kircheßner

Trace elements in urinary stones composed from uric acid ............. 30– 7
S. Mesarić, F. Vlašić and A. Tucak

The clinical and biochemical effects of allopurinol and bendrofluazide in recurrent urinary tract
stone-forming patients: A five year follow-up ....................... 30– 8
G. Welch, J. Moncur and R. Scott

Metabolic behaviour of barium in laboratory animals ................... 30– 9
J. Edel, E. Babouth, V. Barussi, A. Di Nucci, C. Gregotti, L. Manzo and E. Sabbioni

Inhibition of nephrocalcinogenesis by dietary fluoride .................. 30–10

Chapter 31
INFECTION AND IMMUNITY

Analysis of cerebral spinal fluid (CSF) and urine from meningitis patients ............. 31– 1
A.M. Kinyua, J.B. Owera-Atepyo, F.D. Juma, J. Kyobe and J. Mubi

Tissue metal changes with influenza virus: Is redistribution of calcium part of the acute response
to infection? ....................................................... 31– 2

Histochemical detection of peroxidized lipids in thymic macrophages of nickel chloride-intoxicated rats . . 31– 3
N.M. Milićević and Z. Milićević

Zinc and immune status in alopecia ................................ 31– 5
L. Oremović, V. Zjačić-Rothvić, S. Handl and B. Momčilović

Silicon, selenium and glutathione peroxidase in bovine mastitis ............... 31– 6
F. Atroshi, S. Sankari, H. Westerholm, H. Saloniemi and T. Westermarck

Method for the determination of mastitis milk ratio in the bulk milk ........... 31– 7
J. Čsapó and Zs. Čsapó

Effect of dietary zinc supplementation on immune function in aging mice ........ 31– 8
E. Mocchegiani, M. Muzzioli and N. Fabris

Chapter 32
TRACE ELEMENTS DIETARY REQUIREMENTS AND SUPPLEMENTATION IN ANIMALS

A mineral mix for sheep grazing dry pastures. Effects on blood and tissue mineral concentrations ........... 32– 1
D.G. Masters, C.L. White, D.B. Purser, D.W. Peter, S.P. Roe and P.J. Barnes

Selective zinc intake of poultry .................................... 32– 3
M. Kircheßner, U. Steinruck and F.X. Roth

Effect of exercise on zinc status in the rat ........................ 32– 4
F. Cousy, C.Y. Guézennec and P. Lafargue

Development of a radioimmunoassay for vitamin B12 and its application in the diagnosis of
cobalt deficiency in sheep ........................................ 32– 5
D.K. Kennedy, A. Molloy and W.J. Blanchflower

Faecal excretion and retention of heavy metals in sheep ingesting topsoil from fields treated with
metal-rich sewage sludge ......................................... 32– 7
N.F. Suttle, J. Brebner and J. Hall

Biological monitoring of diary cows chronically exposed to inorganic mercury from the environment ....... 32– 8
M. Bozić, E. Nanut, M. Dermej and Z. Stjepovec

Model of absorption, distribution and excretion of copper in dairy cows .......... 32– 9
W.T. Buckley

Biliary copper and zinc excretion in pregnant bovine ..................... 32–11
S.R. Gooneralme and D.A. Christensen

Effect of iron and nickel supplied orally and i.v. on biliary secretion rate of iron, copper and manganese .... 32–12
M. Kircheßner, W. Kulig and M. Kreuzer

Metabolic adaptation of first-litter gilts during late gestation in response to dietary manganese intake ....... 32–14
E.R. Chavez and J.A. Rheumae

Dietary intake of Mn, Zn, Cu and requirements in dairy cows with high production level .................. 32–15
M. Šimek, A. Krása, V. Prokop and V. Musil

Chapter 33
ANALYTICAL METHODS (II)

Development of separation method for the speciation of chromium in plasma of patients on
continuous ambulatory peritoneal dialysis .......................... 33– 1
F. Borguet, R. Cornelis, H. Hilderson and N. Lameire
Inductively coupled plasma mass spectrometry – its place in human bone analysis .......................... 33– 2
L.C. Winter

Direct hydride generation atomic absorption spectrometry of total urinary arsenic excluding seafood arsenic species .................................................. 33– 4
P. Coyle, D.L. Heanes, M.R. Haywood and A.M. Rofe

Inductively coupled plasma mass spectrometry (ICP-MS) in biological studies for multielement analysis and isotope ratios .................................................. 33– 5

Elemental analysis of cerebrospinal fluid (CSF) by inductively coupled plasma mass spectrometry (ICP-MS) 33– 7
J. Thompson, N.I. Ward and W. Goody

Electrochemical determination of aluminum and copper in clinical materials .................................. 33– 8
A.J. Moronta, J.E. Tahdn, J.A. Navarro and R.A. Romero

Elemental profiles of pharmaceutical tablets by ICP-MS ................................................................. 33– 9
E. Johansson, T. Westermarck and T. Liljefors

Determination of isotope ratios of molybdenum by chelate gas chromatography/mass spectroscopy for bioavailability studies .................................. 33–10
M.A. Soltani-Neshan, K. Dorner and J. Schaub

Trace uranium determination in foodstuffs and diets by radiochemical neutron activation analysis .... 33–12
L. Benedik and A.R. Byrne

Nuclear track detectors in radiotoxicological assessment of nuclear plant supervised workers .... 33–13
G. Di Pretoro, L. Gambini, A. Feriani and P. Pasquinelli

Blood lead determined by inductively coupled plasma/mass spectrometry (ICP/MS) ................. 33–14
N.W. Alcock and V.M.S. Ramanujam

Part III – ROUND TABLES

Chapter 34
COPPER REQUIREMENTS AND TOLERANCE IN MAN

Copper absorption and gastrointestinal excretion in humans: The impact of adaptation to dietary copper intake on copper deficiency and toxicity, (Key paper) ........................................... 34– 1
J.R. Turnlund

Setting the copper RDA: Limitations of the contemporary approach, (Key paper) ......................... 34– 3
I.E. Dreosti

The relationship between dietary copper excess and liver damage, (Key paper) ............................. 34– 4
M.S. Tanner

Report of the Round table: »Copper requirements and copper tolerance in man« ......................... 34– 6
(Rapporteur: I.E. Dreosti)

Chapter 35
ON ESSENTIALITY OF »TOXIC« TRACE ELEMENTS

Lead – an essential trace element, (Key paper) ........................................................................... 35– 1
A.M. Reichlmayr-Lais and M. Kirchgeßner

Studies on the essentiality of some elements ascribed as toxic – arsenic, boron, lead, tin and vanadium, (Key paper) ................................................................. 35– 2
F.H. Nielsen

Discussion ........................................................................................................................................ 35– 4

(Rapporteur: B. Momčilović)

Chapter 36
METHODS OF MINERAL SUPPLEMENTATION FOR GRAZING LIVESTOCK

Free access minerals for grazing livestock, (Key paper) ............................................................... 36– 1
L.R. McDowell and J.H. Conrad

Oral methods of trace element supplementation for grazing ruminants, (Key paper) .................. 36– 3
N.F. Suttle

Discussion ........................................................................................................................................ 36– 4

(Rapporteur J. McC. Howell)

Chapter 37.
TRACE ELEMENT RESEARCH IN THIRD WORLD COUNTRIES – Ad hoc session

Discussion ........................................................................................................................................ 37– 1

Authors Index ................................................................................................................................. xxii

Subject Index ............................................................................................................................... xxvii
