Proceedings of the

Symposium on the Application of Geophysics to Environmental and Engineering Problems

Edited by
Ronald S. Bell
Michael H. Powers
Timothy Larson

March 22-26, 1998
Chicago, IL

The annual meeting of the
Environmental and Engineering Geophysical Society
Table of Contents

Conference Planning Committee ................................................................. iii
Disclaimer ........................................................................................................ iv
Table of Contents .......................................................................................... v
Introduction ..................................................................................................... xiv

ORAL SESSIONS

Methods Emphasis: Developments in Direct Push Technologies

Envirocore: A Dual-Tube Direct Push System for Rapid Site Characterization
*Murray D. Einarson, Michael B. Casey, Donald L. Winglewich, Mary I. Morkin* ................................................................. 1

The Use of Time Domain Reflectometry for Vertically Profiling Water Content Through the Unsaturated Zone
*Ty Ferre, David Rudolph* ........................................................................... 11

Status of ASTM Standardization Activities on Direct Push Technology
*Jeff A. Farrar* ............................................................................................ 25

Innovative Site Characterization and Analysis Penetrometer System (SCAPS): In-situ Sensor and Sampling Technologies
*John H. Ballard, M. John Cullinane, Jr.* ..................................................... 33

Cone Penetrometer Testing and Discrete-Depth Groundwater Sampling Techniques: A Cost-Effective Method of Site Characterization in a Multiple-Aquifer Setting
*Dawn A. Zemo, Yvonne G. Pierce, John D. Gallinait* ................................. 43

Detailed Subsurface Characterization Using the Waterloo Profiler
*Seth E. Pitkin* ............................................................................................ 53

A Permeable Membrane Sensor for the Detection of Volatile Compounds in Soil
*Thomas M. Christy* .................................................................................... 65

Delineation of a Chlorinated-Solvents Plume in Complex Stratigraphy Using the Waterloo (Ingleton) Profiler
*Scott A. MacFabe, Carol J. Scholl, David Rudolph* ................................... 73

Use of SCAPS Suite of Tools to Rapidly Delineate a Large MTBE Plume
*Mark Kram, Ernest Lory* ............................................................................ 85

New Technologies: Advancements in Interpretation, Imaging, and Hardware

Optimizing 3-D Refraction and Reflection Survey Design
*Jie Zhang, Eugene Lively* ........................................................................... 101

True Topographic 2-D Migration of Georadar Data
*Frank Lehmnn, Daniel Vonder Muhll, Michiel van der Veen, Peter Wild, Alan Green* ................................................... 107
Introduction to a Model Based Inversion Algorithm for GPR Signal Processing
Mark D. Patz, Madjid A. Belkerdid ................................................................. 115

Interpretation of Shallow Stratigraphic Facies Using Artificial Neural Networks and Borehole Geophysical Data
Curtis A. Link, Stuart Blundell ................................................................. 125

The Determination of Electrical Anisotropy Using Surface Electric and Electromagnetic Methods
Niels B. Christensen .................................................................................. 135

An Approximate Inversion Procedure for Lines/Grids/Collections of Time-domain Electromagnetic Soundings
Colin G. Farquharson, Douglas W. Oldenburg, Yaoguo Li .................. 145

Electromagnetic Induction Spectroscopy
I.J. Won, Dean Keiswetter, Elena Novikova ........................................ 155

Man Portable GPS/Geophysical Instrument Interface (A Practical Case Study
R.J. Bowers, W.R. Saunders ..................................................................... 163

Continuous Transient Electromagnetic Sounding
Kurt I. Sorensen ......................................................................................... 173

Improvement in the Azimuthal EM Method - the Value of Signal Processing
Lee Slater, Stewart Sandberg, Mariusz Jankowski ................................ 177

Problem Emphasis: Water Produced in Oil Field Operations

Water Produced with Oil and Gas - A Concern for Production and Development of Petroleum Resources
G.N. Breit, B.D. Smith, M.J. McCormick, R.A. Zielinski, J.K. Otton ................ 187

Geophysical Surveys in Mapping Brine Contamination Resulting from Oil and Gas Production
Pieter Hoekstra ......................................................................................... 197

Use of Terrain Electromagnetic Geophysical Methods to Map Saline-Water Contamination, East Poplar Oil Field, Northeastern Montana
Joanna N. Thamke, Steven D. Craigg, Thomas M. Mendes .................. 205

New Technologies: The Use of Geostatistics for Conditioning Geophysical Problems

Stochastic Inversion of 3-D ERT Data
Xianjin Yang, Douglas LaBrecque ......................................................... 221
3-D Characterization of an Alluvial Aquifer System: a Case Study Using Borehole Data and Indicator Geostatistics
Wendy W. Corona .................................................................229

Improved Detection Performance Using a Bayesian Decision-Theoretic Approach
Leslie Collins, Lawrence Carin, Dean Keiswetter, I.J. Won .................................239

Optimal 3-D Geophysical Tomography
Margaret J. Eppstein, David E. Dougherty ..................................................249

A Geostatistical Analysis of Gold Mineralization in Oakley's Reef, Hutti Gold Mines, Karnataka, India
D.D. Sarma ........................................................................257

Problem Emphasis: Waterways and Coastal Areas

The Relevance of Seismic Reflection Polarity to Dredging Performance - A Case Study
Thomas M. McGee ........................................................................267

High-Frequency Acoustic Imaging of L Lake, Savannah River Site, South Carolina
Keith J. Sjostrom, Rodney L. Leist ..........................................................275

Land-Based High-Resolution Seismic Reflection Image of a Karst Sinkhole and Solution Pipe on Fort George Island, Duval County, Northeastern Florida

Methods Emphasis: Borehole Methods

Relating Cone Penetrometer Test Information to Geophysical Data: A Case Study
Anthony Endres, William P. Clement ........................................................295

Comparison of Sonic Log Data For Four Types of Acoustic Tools
Tomio Inazaki, Shiro Watanabe, Toshiyuki Kurahashi ................................305

Geophysical Well Logging and Discrete Depth Water Sampling Methods to Identify Sources of Elevated Barium in a Water Well in Northern Illinois
John Jansen ...........................................................................315

Use of Borehole-Radar Methods to Monitor the Movement of a Saline Tracer in Carbonate Rock at Belvidere, Illinois
J.W. Lane, P.K. Joesten, F.P. Haeni, Mark Vendl, Doug Yeskis ..................323

The Application of Very Low Frequency Electromagnetics and Downhole Geophysical Techniques to an Island Hydrogeologic Study: Rhode Island Formation, Narragansett Basin
Scott C. Michaud, Christopher A. Covel ...................................................333

Integrating Surface and Borehole Geophysics in Ground Water Studies - an Example Using Electromagnetic Soundings in South Florida
Frederick Paillet, Laura Hite, Matt Carlson .............................................349
Use of Multi-Offset Borehole-Radar Reflection Method in Fractured Crystalline Bedrock at Mirror Lake, Grafton County, New Hampshire
J.W. Lane, Jr., F.P. Haeni, Roelof Versteeg ................................................................. 359

Combination of Downhole Gamma Logging and Soil Vapor Measurements to Track Low Level Chlorinated Solvent Contamination in the Deep Vadose Zone
Rich Meixner, Dan Blout, Betsy Hovda, Bill Crawford, Jim Viellenave, Duane Newell, Richard Heibel ................................................................. 369

Mapping Hydraulically Permeable Fractures Using Directional Borehole Radar and Hole-to-Hole Tomography With a Saline Tracer
David L. Wright, J.W. Lane, Jr ................................................................. 379

Problem Emphasis: Brownfields and Other Environmental Assessments

Brownfield Site Investigation Using Geophysics: A Case History from East Chicago
Jennifer Holt, Jeffrey Daniels, Francois Baumgartner, Stanley Radziviscius ................................................................. 389

Characterization of a Newly Discovered LNAPL Plume at Wurtsmith AFB, Oscoda, MI
William A. Sauck, Estella Atekwana, Jose L. Bermejo ................................................................. 399

Comparison of Magnetic and Electromagnetic Anomalies
I.J. Won, Dean Keiswetter ................................................................. 409

Fractures in Limestone Imaged by Radar
Charles T. Young ................................................................. 417

Characterization of a Complex Refinery Groundwater Contamination Plume Using Multiple Geoelectric Methods
Estella A. Atekwana, William A. Sauck, D. Dale Werkema, Jr ................................................................. 427

Composite Landfill Characterization: an Integrated Geophysical Study
Eva Lanz, Hansruedi Maurer, David E. Boerner, Heinrich Horstmeyer, Alan Green ................................................................. 437

Application of Magnetic and Multi-frequency EM Techniques for Landfill Investigations: Case Histories
Craig Murray, Dean Keiswetter ................................................................. 445

How Important is the Orientation of a Horizontal Loop EM System? Examples From a Leachate Plume and a Fault Zone
David C. Nobes ................................................................. 453

Problem Emphasis: Engineering Hazards

Shear Wave Velocity Measurements for Earthquake Hazards Studies, Fraser River Delta, British Columbia
J.A. Hunter ................................................................. 459
Methods Emphasis: Expedited Site Characterization

Acceptance of the Expedited Site Characterization (ESC) Approach in Environmental Cleanups
Caroline Purdy, Paul Beam ................................................................. 521

ESC: How It Differs From Current State of the Practice
Richard Benson, Al Bevolo, Paul Beam ............................................... 531

ESC Phase I: Locating and Mapping Drilling Mud Pits at the Central Nevada Test Site
Ronald D. Kaufmann, Lynn B. Yuhr, J. David Wonder ....................... 541

ESC Demonstration: D-Area Oil Seepage Basin - Savannah River Site: A Case Study
Steve Gelb, J. David Wonder ............................................................ 551

Managing Data and Its Integrity in the ESC Process
Lynn B. Yuhr ............................................................................ 561

Methods Emphasis: Monitoring Techniques and Applications

Optimization of ERT Surveys
Emily Sullivan, Douglas LaBrecque ................................................... 571

DC Resistivity Monitoring of Potassium Permanganate Injected to Oxidize TCE In-situ
Jonathan E. Nyquist, Bradley J. Carr, R. Kim Davis .......................... 583

3-D ERT Inversion Used to Monitor an Infiltration Experiment
Melissa A.Stubben, Douglas LaBrecque ........................................... 593

3-D ERT Inversion Used to Monitor an Injection Experiment
Melissa A. Stubben, Douglas LaBrecque ........................................... 603
Electrical Resistivity Tomography Monitoring for Process Control in Environmental Remediation
Douglas LaBrecque, Jesse Bennett, Gail Heath, Susan Schima, Hank Sowers ........................................613

In-situ Verification and Monitoring of Stabilized TRU/Mixed Waste
Mark Ewanic, David Reichhart, M. Cathy Pfeifer .......................................................... 623

Verification of Subsurface Barriers Using Integrated Geophysical Techniques
Louise Pellerin, David Reichhardt, Thomas Daley, Fabien Gilbert, Sussan Hubbard, Ernest Majer, John Petersen, William Daily, Abelardo Ramirez ......................................................... 635

A Wire Net Design for Electrical Monitoring of Environmental Barriers
Christian Bernstone, Torleif Dahlin, Peter Ulriksen, Johan Claesson ........................................... 645

Monitoring of Groundwater Pump Tests Using GPR and Electrical Resistivity
John Dolynchuk, David Lesmes, Alfredo Urzua, Chris Kilbridge .................................................. 655

Monitoring Air Sparging in the CFB Borden Aquifer Using GPR Reflection Surveys, Borehole GPR, and Geophysical Well Logging
David Redman, J. Brant Gill, Derek W. Tomlinson, Neil Thomson .................................................. 665

Methods Emphasis: Shallow Seismic Reflection

Statics Applied to Shallow Seismic Reflection Data
Andre Pugin, Susan Pullan ........................................................................................................675

Seismic Detection of Viscous Contaminant Using Shallow Seismic Reflection
Ran Bachrach, Amos Nur, James Rickett .................................................................................. 685

3-D High-Resolution Reflection Seismic Imaging of Unconsolidated Glacial Sediments
Frank Büker, Heinrich Horstmeyer, Alan Green ........................................................................ 695

Reprocessing of Shallow Seismic Reflection Data to Image Faults Near a Hazardous Waste Site on the Oak Ridge Reservation, Tennessee
William E. Doll ......................................................................................................................... 705

The Application of Very Low Frequency Electromagnetics and Downhole Geophysical Techniques to an Island Hydrogeologic Study: Rhode Island Formation, Narragansett Basin
Scott C. Michaud, Christopher L. Covel .................................................................................. 715

Seismic Reflection Surveys for Mapping Groundwater Migration Pathways at Tinker Air Force Base, Oklahoma
Jeffrey B. Hackworth, Sara Sayler, Gilein Steensma, David W. Marcum ................................... 723

Investigating Alpine Valley Fill with Reflection Seismics (2-D) and Georadar (2-D and 3-D)
Heinrich Horstmeyer, Frank Büker, Patrick Geissmann, Lori Keller, Alan Green ......................... 735

Time-Varying Fold in High-Resolution Seismic Reflection Data: A Recipe For Optimized Acquisition and Quality Control Processing and Interpretation
Lee M. Liberty, Michael Knoll .................................................................................................. 745
High-Frequency Sources in Shallow Seismic Experiments
Michiel van der Veen, Frank Nitsche, Frank Büker, Frank Lehmann, Alan Green, Hermann Buness .................................................................753

Methods Emphasis: Use of the Induced Polarization Method

Spectral Induced Polarization Studies of Mine Dumps Near Silverton, Colorado
David L. Campbell, David V. Fitterman, Andrew S. Hein, Daniel P. Jones .................................................................761

The Influence of Pore Fluid Chemistry on the Induced Polarization Response of Rocks and Soils
Kevin M. Frye, David P. Lesmes, F. Dale Morgan ........................................................................................................771

Experimental Use of the Induced Polarization Method to Map and Characterize the Shallow Sea-Floor
Jeff Wynn, Jack Kindinger, Dana Wiese ....................................................................................................................781

3-D Induced Polarization Inversion Using Complex Electrical Resistivities
Weiqun Shi, William Rodi, F. Dale Morgan ............................................................................................................785

IP and TEM for Discrimination and Resolution in Mapping Groundwater Contamination at Monument Valley

Problems Emphasis: Ground Water Problems

A Conceptual Model for the Geoelectrical Response of LNAPL Plumes in Granular Sediments
William A. Sauck ........................................................................................................................................805

Internal Structure of the 800 Area Landfill, Argonne National Laboratory, From Integrated Geophysical Measurements
Christopher J. Black, Philip J. Carpenter ................................................................................................................819

The Use of Ground-Penetrating Radar to Accurately Determine Water Table Depths
Nicole M. Trenholm, L.R. Bentley .........................................................................................................................829

Leachate Plume Investigation Using Mise-a-la-Masse Resistivity
Charles T. Young, Seth Lemke ................................................................................................................................839

High Resolution Reflection Seismic and Resistivity Imaging of Deep Regional Aquifers for Stratigraphic Mapping
E.W. Gilson, R. Kellett, J.W. Fennell, P.D. Bauman, C.B. Sikstrom ........................................................................849

The Influence of Micro-Geometry on the Hydraulic Permeability and the Induced Polarization Response of Sandstones
John T. Sturrock, David P. Lesmes, F. Dale Morgan ................................................................................................859

DC-Resistivity Multi-Electrode Profiling in Hydrogeological Investigations: A Comparative Study of the Pulled-Array Continuous Electrical Sounding Method and a Multi-Electrode Method with Fixed Electrodes
Ingelise Møller, Kurt Sørensen, Niels Christensen ................................................................................................869
Problems Emphasis: Transportation Infrastructure

Ground-penetrating Radar and High-resolution Reflection Seismic Surveys of Subsidence Features Along Interstate 44, Springfield, Missouri
Glendon Adams, Neil Anderson, Michael Shoemaker, Jesse Baker, Alan Hatheway ........................................... 875

Airborne Geophysics Helps Determine Route of Proposed Railroad Tunnel
Les P. Beard, Ole Lutro ................................................................................................................................. 883

Use of GPR in 2-D and 3-D Imaging of Bridge Footings and Scour Studies
Doria Kutrubes, Kenneth Maser ............................................................................................................... 893

High-Resolution Reflection Seismic Surveys of Abandoned Lead and Zinc Mines Along a Proposed Interstate Route Near Joplin, Missouri
Michael Shoemaker, Neil Anderson, Jesse Baker, Alan Hatheway, Michael Roark, Steve Cardimona, Shauna Oppert, Tim Newton .......................................................... 903

Seismic Refraction and Gravity Investigation of a Tunnel Route near Columbus, Ohio
Mark T. Howell, Paul J. Wolfe, Benjamin H. Richard, Ernest C. Hauser, Heather Marsh ......................... 913

POSTER SESSIONS

Geologic Hazards

A Ground-Penetrating Radar Study of Quaternary Faulting in the Benton Hills Area, Southeast Missouri
S. Oppert, N.L. Anderson, D. Hoffman, N. Fraser, M. Shoemaker, T. Shaw ..................................................... 921

Imaging and Characterizing Fractures in a Rock Slope
Toshiyuki Kurahashi, Tomio Inazaki, Tomo Ohtani, Shiro Watanabe ......................................................... 929

Groundwater Applications

Hysteresis in the Electrical Conductivity-Saturation Relationship of A Sand
S.D. Piggott, J.D. Redman, A.L. Endres .................................................................................................... 939

Geophysics for Groundwater Prospecting in Republic of Panama
Abel G. Carrasquilla, Alberto Caballero, Moises Ortega ........................................................................ 947

Cross-Plotting Conventional Geophysical Well Logs to Identify Permeable Pathways in a Fractured Bedrock Aquifer
James M. Cooper, Philip J. Carpenter .................................................................................................... 957

An Application of Electrical Anisotropy in Hydrogeological Modeling
Timothy Davis, Robert W. Taylor ............................................................................................................ 967

Controlled-Source Electromagnetic Mapping of a Faulted Sandstone Aquifer in Central Texas
M.E. Everett, E.M. Gorman, B. Johnson .................................................................................................. 975
Geophysical Identification of Karst Fissures Near a Landfill in Southwestern Illinois
James C. Schneider, Philip J. Carpenter .............................................................. 985

An Airborne Electromagnetic (EM) Survey Used to Map the Upper San Pedro River Aquifer, Near
Fort Huachuca in Southeastern Arizona
Jeff Wynn, Mark Gettings ..................................................................................... 993

Vertical Seismic Profile and Cross-Borehole Ground Penetrating Radar Measurements in Basalt
Intraflow Structure
William K. Hudson .............................................................................................. 999

New Technologies

Tomographic Pseudo-Inversion of Pole-Pole and Pole-Dipole Resistivity Profiles
P. Cosentino, D. Luzio, R. Martorana, L. D’Onofrio, M. Marchisio, G. Ranieri ...................... 1009

Distributed EM Parameters of an Ungrounded Horizontal Loop and Their Relation to the Near-
Surface Geoelectrical Features
N.O. Kozhevnikov, S.P. Nikiforov ........................................................................... 1019

Approach to the Interpretation of Potential Electrical Data in the Presence of Uneven Surface
Alexander A. Petrov .............................................................................................. 1029

Rapid 3-D Refraction and Reflection Raytracing
Jie Zhang, Eugene Lovely ...................................................................................... 1037

Shallow Reflection Seismology

Hum Filter: Power Line Noise Eliminator for Shallow Seismic Data
Jianghai Xia, Richard D. Miller ................................................................................ 1043

Radar Sequence Stratigraphy: An Integrated Analysis of a Scroll Bar Complex
David P. Lesmes, David C. Roy, Scott M. Decker ....................................................... 1053

Forensic Applications

Applications of the Ground-Penetrating Radar Technique in the Detection and Delineation of
Homicide Victims and Crime Scene Paraphernalia
Michael S. Roark, Jeremy Strohmeyer, Neil Anderson, Michael Shoemaker, Shauna Oppert ......... 1063

Author’s Index ........................................................................................................ 1089
Geophysical Identification of Karst Fissures Near a Landfill in Southwestern Illinois
James C. Schneider, Philip J. Carpenter ................................................................. 985

An Airborne Electromagnetic (EM) Survey Used to Map the Upper San Pedro River Aquifer, Near Fort Huachuca in Southeastern Arizona
Jeff Wynn, Mark Gettings .......................................................................................... 993

Vertical Seismic Profile and Cross-Borehole Ground Penetrating Radar Measurements in Basalt Intraflow Structure
William K. Hudson ..................................................................................................... 999

New Technologies

Tomographic Pseudo-Inversion of Pole-Pole and Pole-Dipole Resistivity Profiles
P. Cosentino, D. Luzio, R. Martorana, L. D’Onofrio, M. Marchisio, G. Ranieri ......................... 1009

Distributed EM Parameters of an Ungrounded Horizontal Loop and Their Relation to the Near-Surface Geoelectrical Features
N.O. Kozhevnikov, S.P. Nikiforov .............................................................................. 1019

Approach to the Interpretation of Potential Electrical Data in the Presence of Uneven Surface
Alexander A. Petrov .................................................................................................. 1029

Rapid 3-D Refraction and Reflection Raytracing
Jie Zhang, Eugene Lavely .......................................................................................... 1037

Shallow Reflection Seismology

Hum Filter: Power Line Noise Eliminator for Shallow Seismic Data
Jianghai Xia, Richard D. Miller .................................................................................. 1043

Radar Sequence Stratigraphy: An Integrated Analysis of a Scroll Bar Complex
David P. Lesmes, David C. Roy, Scott M. Decker ..................................................... 1053

Forensic Applications

Applications of the Ground-Penetrating Radar Technique in the Detection and Delineation of Homicide Victims and Crime Scene Paraphernalia

Author’s Index ............................................................................................................ 1089
