Geotechnical Site Characterization

Edited by
Peter K. Robertson
Department of Civil and Environmental Engineering, University of Alberta, Edmonton, Canada

Paul W. Mayne
School of Civil and Environmental Engineering, Georgia Institute of Technology, Atlanta, USA

VOLUME 2
## Table of contents

### Pressuremeter testing

Effects of pressuremeter geometry on the results of tests in sand
*R.Ajalloeian & H.S.Yu*

New design rules for the bearing capacity of shallow foundations based on Menard pressuremeter tests
*S.Amar, F.Baguelin, Y.Canépa & R.Frank*

Properties of clays from Menard pressuremeter test results
*R.Bahar*

Laboratory pressuremeter tests on reconstituted silt samples
*S.Belkacemi & J.L.Kauschinger*

Using pressuremeter to obtain parameters to elastic-plastic models for sands
*J.Biarez, M.Gambin, A.Gomes-Correia, E.Flavigny & D.Branque*

Quantification of the soil disturbance generated by selfboring pressuremeters
*R.P.Cunha*

Interpretation of selfboring pressuremeter tests using a curve fitting approach
*R.P.Cunha & R.G.Campanella*

The Menard pressuremeter for quality control of soil densification
*J.-M.M.Debats, R.A.Frank, M.P.Gambin & P.A.Savasta*

A new method to estimate the angle of internal friction of sand using a pressuremeter test
*R.Fukagawa, T.Muro, K.Hata & N.Hino*

A new approach to the Menard PMT parameters
*M.P.Gambin & J.F.Jézequel*

Strain level dependency of pressuremeter shear modulus of clay
*K.Hata, R.Fukagawa, T.Muro & Y.Morita*

Pressuremeter testing for drilled shafts in gravelly clay
*J.M.O.Hughes, H.Gertje & M.J.Wu*

Development of automatic cyclic pressuremeter and its application to evaluation of deformation and strength of ground
*Y.Koike & I.Furuta*
Determining the characteristics of self-hardened suspension by pressuremeter tests

M. Matys

Incorporating the unloading portion in the interpretation of pressuremeter test in cohesive soil

D. Penumadu

Assessment of soil properties in cohesive-frictional materials with pressuremeter tests

F. Schnaid & F. M. Mántaras

Deformation and in-situ stress testing

Measurement and prediction of effective stress in an overconsolidated clay

I. G. Doran, V. Sivakumar, A. S. Johnson & S. J. Cummings

Evaluation of coefficient of lateral subgrade reaction based on horizontal loading test for piles

Y. Ikeda & H. Matuzawa

A new self boring in-situ friction testing technique

Seismic flat dilatometer tests in Piedmont residual soils

G. K. Martin & P. W. Mayne

Measurement of matric suction in compacted soils used modified tensiometer

T. Nishimura

Tensiometers; their design and use for civil engineering purposes

A. M. Ridley, F. Marsland & A. R. Patel

International development of the field compressometer

J. M. Strout & K. Senneset

The field compressometer test in Norway

J. M. Strout & K. Senneset

Push-in total stress cells for horizontal pressure measurement in clay

J. P. Sully & R. G. Campanella

Dilatometer tests in a Leda clay crust

A. Tanaka & G. E. Bauer

In situ determination of $c_h$ by flat dilatometer (DMT)

G. Totani, M. Calabrese & P. Monaco

A large scale plane strain test facility

D. De S. Udakara & J. N. Kay

Dynamic penetration testing

Long-term set-up of driven piles in non-cohesive soils evaluated from dynamic tests on penetration rods

G. Axelsson

Comparison of SPT energy measurement methods

J. J. Butler, J. A. Caliendo & G. G. Goble
CPT-SPT correlations for some Brazilian residual soils

A more rational utilization of some old in situ tests
L. Décourt

Summary of Standard Penetration Test (SPT) energy measurement experience
J.A. Farrar

Calibration of the blunt tipped dynamic penetrometer for silica sands
S. Fityus

SPT N-value and S-wave velocity of gravelly soils with different particle gradings
T. Kokusho & Y. Yoshida

Standard penetration tests with torque measurement
A.J. Lutenegger & S.P. Kelley

The practice of the standard penetration test in degradable soils
E. Padilla C.

Spatial distribution characteristics of soil strength in embankment estimated by portable dynamic cone penetration test

Static penetration testing

Site characterization of a lacustrine very soft Rio de Janeiro organic clay
M.S.S. Almeida

Methods of pile design based on CPT and SPT results
P. Bandini & R. Salgado

Evaluation of liquefaction potential and lateral deformations using CPT and field case histories
M.H. Baziar & R. Ziaie-Moayed

Cone penetration testing in the Mid-Mississippi River Valley
K.M. Berry, S.M. Olson & M. Lamie

Horizontal cone penetration testing
W. Broere & A. F. van Tol

Site characterization of soil deposits using recent advances in piezocone technology
R.G. Campanella, M.P. Davies, H. Kristiansen & C. Daniel

Geotechnical site characterization of Recife soft clays

Role of piezocone tests in heavy lift foundation design
J.R. Davie, K.R. Bell, M.B. Fitzsimmons & D.A. Haggerty

An integrated CPT approach for a major housing development project
H.T. Durgunoğlu, H.F. Kulaç, S. İlkiz & C.G. Olgun
Undrained shear strength from cone penetration test
H.T. Eid & T.D. Stark

Cone penetration resistance of sand from seismic tests
S. Eslaamizaad & P.K. Robertson

Cone penetration testing in Irish soils
A. Faulkner, B.M. Lehane & E.R. Farrell

Stiffness of carbonatic Quiou sand from CPT
V. Fioravante, V.N. Ghionna, M.B. Jamiolkowski & S. Pedroni

CPT data for the bearing capacity of piles with variable section calculation
A. L. Gotman

CPT for the bases deformability evaluation
N. Z. Gotman

Geometry and scale effects in CPT and pile design
M. W. Gui & M. D. Bolton

Delineating geostratigraphy by cluster analysis of piezocone data
Y. A. Hegazy & P.W. Mayne

Interpretation of signals from an acoustic cone penetrometer
G.T. Houlsby & B.M. Ruck

In-situ soil characterization using Vision Cone Penetrometer (VisCPT)
R. D. Hryciw, A.M. Ghalib & S.A. Raschke

Uncertainty propagation in CPT-based liquefaction resistance evaluation
C.H. Juang & T.H. Tao

Effect of negative pore pressure on the result of soundings and in situ tests in silt
R. Larsson

Estimations of geotechnical properties from piezocone penetration tests in Korea
S.J. Lee & M.M. Kim

Direct shear tests between diatomaceous mudstone and friction sleeve materials
with different surface roughness
T. Matsumoto, K. Takesue, H. Sasao & T. Igarashi

Clay stress history evaluated from seismic piezocone tests
P.W. Mayne, P.K. Robertson & T. Lunne

Acoustic emission cone penetration testing (AE–CPT)
P. Mengé

Investigation methods for soft tailings deposits
T.A. Newson & M. Fahey

Commercial CPT profiling in soft rocks and hard soils
J. Peuchcn
Cone penetration testing in cemented soils: Comparisons between field and laboratory chamber test results
A.J. Puppala, S. Arslan, M.T. Tumay & Y.B. Acar

Some theoretical and practical problems of CPT use
I.B. Ryzhkov

Comparison between CPTU data, mechanical and consolidation behaviour of soils
Statistical and mathematical analysis
M. Sacchetto, G. Cibin, G. Di Dio, V. Salomoni & M. Soranzo

Aspects of cone penetration in natural weakly-cemented deposits
F. Schnaid, N.C. Consoli & J.H. Averbeck

Correlation of CPT and modulus of subgrade reaction in silty sand
S.A. Shihata & J.K. Azhar

Experience from site investigations in glacial soils of the Alpine region
W. Steiner & G. Togliani

Correlation between ultimate pile skin friction and CPT data
K. Takesue, T. Matsumoto & H. Sasao

A continuous intrusion electronic miniature cone penetration test system for site characterization
M.T. Tumay, P.U. Kurup & R.L. Boggess

Obtaining material properties for slope stability analysis of gold tailings dams in South Africa
J.F. van der Berg, S.W. Jacobsz & J.M. Steenkamp

Correct use of cone penetrometer sensors to predict subsurface conditions
J.L. Walker, C.M. Rose, S.C. Armstrong & J.C. Burton

Vane test used for very soft soil-like materials characterization
J. Záleský, J. Kos, J. Salák, V. Halama, P. Karlín & V. Hořejší

Advanced interpretation for strength and deformation

Application of in-situ testing on cohesive soils
F.M. Abdabbo & R.M. El-Hansy

Site investigation and parameter evaluation for analysis of a landslide along the Göta River, Sweden
H. Andersson, E. Ottosson & G. Sällfors

Performance of in situ testing methods in predicting deep foundation capacity
D.C. Brahana, J. Wang & R. Russo

Comparison of strength and stiffness parameters for a Piedmont residual soil
D.A. Brown & J. Vinson

Uncertainty in undrained shear strength assessment using cone penetration test
H.T. Fung & J.N. Kay
Drained and undrained shear strengths of a liquefied gravelly fill from Kobe Port Island
M.Hatanaka & A.Uchida
1241

Burnaby Lake – A case history of piezocone testing and ground penetrating radar
J.A.Howie, D.S.Cavers & W.S.Karlen
1247

Site characterization of a dynamically compacted silty fine sand
A.B.Huang, J.W.Chang, D.D.S.Chen & C.C.Yeh
1253

Chamber calibration of CPT under simulated field conditions
A.B.Huang & H.H.Hsu
1259

Evaluation of undrained strengths obtained from three shear tests
A.Iizuka, T.Hirosi, D.Shin, K.Ohmori & H.Ohta
1265

Analysis of a survey on sand compressibility and its application in predicting drained friction angle of sand based on CPT
C.H.Juang, R.D.Holtz & A.-B.Huang
1273

Deformational characteristics of granite weathered residual deposit
D.-S.Kim, G.-C.Kweon, S.Y.Chung & J.-Y.Park
1279

Estimating method of shearing resistance parameters of compacted gravelly soils in field by laboratory tests
H.-G.Lee
1285

Shear modulus and damping of a stiff marine clay from in situ and laboratory tests
D.C.F.Lo Presti, M.Maugeri, A.Cavallaro & O.Pallara
1293

Which soil-investigation methods can we trust: Field tests or laboratory tests?
P.D.Long
1301

Evaluation of cone penetration testing as an in situ liquefaction resistance measurement
O.Matsuo & T.Tsutsumi
1309

Characterization of Welland Clay at Forkes Road
E.L.Matyas, T.C.Kim & S.Q.Ahmad
1317

Iowa borehole shear testing in unsaturated soil
G.A.Miller, S.Azad & C.E.Hassell
1321

Comprehensive slope stability analysis in unsaturated silts and sands
A.-L.Öberg-Högsta
1327

A correlation of soil strength between different sounding tests on embankment
K.Okada, T.Sugiyma, H.Muraishi, T.Noguchi & M.Samizo
1333

Geotechnical and seismic surveys for site characterization
K.Pitilakis, K.Lontzetidis, D.Raptakis & Th.Tika
1339

New technology of determination of physical and mechanical characteristics of soils
V.V.Podtelkov, T.Y.Lebedinskaya & V.A.Haznaferov
1345

Undrained monotonic behavior of sand from self-boring pressuremeter
D.Roy, R.G.Campanella, P.M.Byrne & J.Hughes
1349
Estimation of cyclic strength of sand from self-boring pressuremeter tests
D. Roy, J. Hughes & R. G. Campanella

Characterizing stiffness and strength of soft Bangkok clay from in-situ and laboratory tests

Deformation and strain fields beneath an embedded circular plate
J. M. Strout

Correlation between SPT and seismic CPT
Y. Suzuki, T. Sanematsu & K. Tokimatsu

Characterization of a saprolitic soil from Porto granite by in situ testing
A. Viana da Fonseca, M. Matos Fernandes & A. S. Cardoso

Strength profiling in soft offshore soils
P. G. Watson, T. A. Newson & M. F. Randolph

Advanced interpretation for flow and consolidation

Potentiometric surface mapping with a CPT: Case studies and a word of caution
P. K. Aggarwal

Evaluating the state of consolidation of clay at a reclaimed site
M. F. Chang, V. Cho, L. F. Cao & A. Arulrajah

Pore pressure dissipation rates as a discriminant in evaluating permeability distributions from piezocone tests
D. Elsworth, P. K. Aggarwal, A. J. Kondas & M. Loureiro

Hydraulic conductivity assessment at the Trino Vercellese power station site: Large and small scale tests
D. Faiella & R. Lancellotta

A new CPT method for estimating soil hydraulic properties
R. Kodešová, M. M. Gribb & J. Šimůnek

TC16 Report

Pressuremeter testing in onshore ground investigations: A report by the ISSMGE Committee TC16
B. G. Clarke & M. P. Gambin
