Proceedings
of the Fifth International Symposium on

Methods and Models
in Automation and Robotics

25 - 29 August 1998
Międzyzdroje, Poland

EDITORS
S. Domek, R. Kaszyński, L. Tarasiejski

Control Theory
Modelling and Simulation

VOLUME 1 of 3
## TABLE OF CONTENTS

### VOLUME 1

#### PLENARY PAPER

Active noise control in an acoustic chamber: mathematical theory
*L. Lasiecka (USA)* .................................................. 13

Boundary control systems in factor form: transfer functions and input-output maps
*P. Grabowski (Poland) and F. M. Callier (Belgium)* .......... 23

#### INVITED PAPERS

**DISTRIBUTED PARAMETER SYSTEMS**

The spectral factorization problem for spectral densities with arbitrary delays
*F. M. Callier and J. Winkin (Belgium)* ......................... 35

On application of a composite semigroup to the operator differential Sylvester equation
*Z. Emirsajlow (Poland)* .......................................... 37

Well-posedness and stability analysis of hybrid feedback systems using Shkalikov’s theory
*P. Grabowski (Poland)* ............................................ 39

On the asymptotically optimal tuning of robust controllers for parabolic DPS: the case of sinusoidal reference and disturbance signals
*T. Hamalainen and S. Pohjolainen (Finland)* ............... 49

Discrete time Riccati equation and the invariant subspaces of linear operators
*J. Malinen (Finland)* ............................................... 51

Optimal control of distributed parabolic systems with time delays
*A. Kowalewski (Poland)* .......................................... 57

Adaptive low gain control of infinite dimensional systems by means of sampling time adaptation
*N. Ozdemir and S. Townley (UK)* ................................. 63

Lack of exact controllability with finite-dimensional input spaces
*R. Rebarber (USA) and G. Weiss (UK)* .......................... 69

Well-posed linear systems in $L_1$ and $L_\infty$ are regular
*O. J. Staffans (Finland) and G. Weiss (UK)* ................. 75

Structural decomposition of thermo-elastic semigroups with rotational forces
*L. Lasiecka and R. Triggiani (USA)* ............................. 81

Towards a robust-design approach to optimal location of moving sensors in parameter identification of DPS
*D. Uciński (Poland)* .............................................. 85

Dynamic stabilizability of well-posed linear systems
*G. Weiss (UK) and R. Rebarber (USA)* ......................... 91

**SHAPE OPTIMIZATION AND APPLICATIONS TO CONTROL PROBLEMS**

Topological derivative for optimal control problems
*J. Sokolowski (France) and A. Zochowski (Poland)* ........ 101

Shape optimization of a thin shell formed on a sphere
*T. Lewiński (Poland) and J. Sokolowski (France)* .......... 105

Solid with a crack and a friction
*V. A. Kovtunenko (Russia)* ...................................... 111

**REGULAR PAPERS**

**2-D AND DISTRIBUTED PARAMETER SYSTEMS**

Positive realisation in canonical form for multivariable 2D linear systems
*T. Kaczorek (Poland)* ............................................ 119

Controllability of 2-D continuous-discrete linear systems with delayed control
*J. Klamka (Poland)* ............................................... 125

Identification of field sources in 2-D systems using a combinatorial method
*Z. Trzaska and E. Ryabygier (Poland)* ......................... 129

On the stability properties of discrete approximations to the dynamics of differential linear repetitive processes
*K. Gałąkowski (Poland), E. Rogers (UK), A. Gramacki, J. Gramacki (Poland) and D. H. Owens (UK)* ............ 135

MIMO variable structure control of a denitrifying distributed parameter biofilter
*O. Boubaker, M. Ksouri (Tunisia) and J. P. Babary (France)* 141

Observability of second order dynamic systems
*J. Wyrwal (Poland)* ............................................... 147

Application of moving window state observer to distributed parameter system
*W. Byrski and P. Kubik (Poland)* ............................... 153
OPTIMIZATION METHODS
Elastic vibration of a thin shell around a large scale static displacement equilibrium
J. Cagnol, J.-P. Marmorat and J.-P. Zolesio (France)..........................161
In search of equilibrium for dynamic models
J. Holubiec and G. Petriczek (Poland)..........................167
Two-phase dual-type optimising control algorithm for uncertain plants
P. Taijewski (Poland)..................................................171
Stability robustness bounds for LQG control with unstructured uncertainties
P. Suchomski (Poland)..................................................177
Robust Schur stability of perturbed polynomials
M. Busłowicz (Poland)..................................................185
A computer algebra approach for solving some optimal control problems by differential dynamic programming technique
M. Boulehmi (Tunisia), J.-L. Calvet (France) and M. Ksouri (Tunisia)........189
Boundary control of a parabolic system with retardations
A. Kowalewski (Poland)..................................................195
Analysis of two finite horizon control problems for uncertain time-varying systems
Z. Emirsajlow and R. Szmidt (Poland)..................................201

LINEAR SYSTEMS
Symbolic computations in the solution of the Diophantine equation
W. Bolek (Poland)..................................................207
A new algorithm for L2 - optimal model reduction
A. Ferrante (Italy), W. Krajewski (Poland), A. Lepschy and U. Viaro (Italy)..................................................213
Stabilisation of positive linear systems
T. Kaczorek (Poland)..................................................219
The simplification of linear models of dynamic by decomposition to zeros and poles
A. Zuchowski and J. P. Paplinski (Poland)................................225
LQR problem for singular time varying systems via the trapezoidal rule
M. Shafiee (UK)..................................................231
Construction of state-space models with minimal dimension for multivariable systems on basis of transfer matrix normalization procedure
Ye. N. Rosenwasser, P. G. Fedorov (Russia) and B. P. Lampe (Germany).........................235

NONLINEAR SYSTEMS
A numerical observer controller for the stabilization of an inverted pendulum system
S. Ibrir (France)..................................................239
Stability of nonlinear systems: unified approach for continuous- and discrete-time systems
J. E. Kurek (Poland)..................................................245
Nonlinear robustness analysis via piecewise constant Lyapunov functions
T. Moor and N. Kazakova-Frehse (Germany)..........................251
On problem of solution of a planar nonlinear controlled object
T. Waclawski (Poland)..................................................257

MODELLING AND SIMULATION
The modelling with Petri nets formalism of control of static UPS system by using adapting modules
R. Borowski and W. Zech (Poland)..................................261
Dynamic modelling of a hydraulic positional cylinder by bond graph method
R. Dindorf (Poland)..................................................267
Quality of approximation of non simplified model by a simplified one
E. Layer and T. Pwowarczyk (Poland)................................273
Cooperative game in partition function form for a cost allocation problem
L. Kruś and P. Bronisz (Poland).....................................279
Drug resistance as infinite dimensional control process with positive feedback - stability and optimization
A. Świernia, A. Polanski, J. Smieja (Poland) and M. Kimmel (USA)..........................285
Modelling and simulation of an ecological problem by means of cellular automata
S. El Yacoubi (France) and D. Uciński (Poland)..........................289
Wind field simulation for air pollution model
R. Oganesian (Ukraine)..................................................295
Modelling of a nonlinear servomechanism with additional feedbacks
K. Paplinski, Z. Sobczyk and J. Tokarzewski (Poland)..........................301
Single channel, discontinuous control of object spatial flight
R. Vogt and R. Głębocki (Poland).....................................307
Some aspects of geometrical modelling of machining
A. Rogowski (Poland)..................................................313
Simulation of a non-linear vibroprotection model
A. Ostanin (Poland)..................................................319
Solid state advanced static VAR compensator - a new approach to modelling
A. Draou, A. Tahri and M. Benghanem (Algeria)..........................325

AUTHOR INDEX..................................................329
