NATURAL WORKING FLUIDS '98

- Gustav Lorentzen Conference

June 2-5, 1998
Oslo, Norway

Joint meeting of the International Institute of Refrigeration Sections B and E

PREPRINTS
OVERVIEW OF PRESENTATIONS

OPENING SESSION

Welcome on behalf of the Organising Committee
Professor Arne M. Bredesen, Norwegian University of Science and Technology

Welcome on behalf of the International Institute of Refrigeration
Mr. Louis Lucas, Director General of IIR

Opening Speech by the Norwegian Minister of Environment
Ms. Guro Fjellanger

Mr. Øystein Dale, Worldwatch Institute

Natural Working Fluids in a Historic Perspective
Professor Alberto Cavallini, University of Padova, Italy
Professor Fritz Steimle, University of Essen, Germany

Natural Working Fluids – Industrial Opportunities
Mr. Carlo Marsiletti, Managing Director, Costan, Italy

Technical Session 1A. WATER
Chairman F. Elefsen, Danish Technological Institute, Denmark

Vacuum Boiling in a Water Vapour Refrigeration System
T. J. Sheer and S. R. Mitchley, University of the Witwatersrand, South Africa

A Jet-pump Inverse Cycle with Water Pumping Column
G. Grazzini and M. D’Albero, Università degli Studi di Firenze, Italy

District Heating Assisted Ejector Cycle Refrigeration Plant for Process Cooling and Air-condition Purposes
S. Lund and L. Søe, Danish Technological Institute, Denmark

District Cooling with "Water as Refrigerant" combined with Energy Storage Systems
J. Paul, Integral Energietechnik GmbH, Germany
Technical Session 1B. WATER
Chairman: F. Elefsen, Danish Technological Institute, Denmark

Turbo Chiller with Water as Refrigerant
P. Albring and G. Heinrich, ILK Dresden, Germany ........................................... 57

Water Cooling by an Expanding Air Stream
M. P. Maiya, Indian Institute of Technology Madras, India .................................. 67

Performance Evaluation of a Desiccant-Evaporative Cooling System
T. J. Sheer and M. G. Thom, University of the Witwatersrand, South Africa .............. 77

Technical Session 2. HEAT TRANSFER AND FLUID FLOW
Chairman: K. Stephan, University of Stuttgart, Germany

The influence of oil presence on the performance of ammonia evaporators and condensers
E. Berends and J. G. Romijn, Grenco Refrigeration BV, The Netherlands .................. 89

Flow Boiling Heat Transfer of Ammonia and Ammonia-Oil Mixtures
H.-J. de Buhr and S. Kabelac, University of Hanover, Germany ................................ 99

Cold Heat Removal Characteristics from Slurry Ice as New Phase Change Material
T. Kawanami, S. Fukusako and M. Yamada, Hokkaido University, Japan .................... 106

Theoretical Analysis of Two-Phase Carbon Dioxide Heat Absorption Process
D. M. Robinson and E. A. Groll, Purdue University, USA ...................................... 116

Technical Session 3. OVERVIEW AND SYSTEM COMPARISON
Chairman: P.-E. Frivik, SINTEF Energy Research, Norway

Compression Systems with Natural Working Fluids – Results and Conclusions from IEA Annex 22 (1995-98)
J. Stene, SINTEF Energy Research, Norway ............................................................. 129

Energy- and Resource Saving Systems are the Alternative to Global Warming
E. G. Zaulichnyi and A. P. Yakushau, National Academy of Science of Belarus, Belarus ...... 138

The Climate Change Implications of Producing Refrigerants
A. McCulloch and N.J. Campbell, ICI Halochemicals, United Kingdom ........................ 148
Technical Session 4A. CARBON DIOXIDE
Chairman: A. Cavallini, University of Padova, Italy

Performance of a Transcritical CO₂ Heat Pump for the Food Processing Industries
M. G. Yarral, S. D. White and D. J. Cleland, Massey University, New Zealand
R. D. S. Kallu, ECNZ, New Zealand
R. A. Hedley, Flotech Limited, New Zealand ................................................................. 159

CO₂ Heat Pumps in Controlled Ventilation Systems
R. Rieberer and H. Halozan, Graz University of Technology, Austria .............................. 167

An Experimental Study on the behaviour of CO₂ Heat Pump Cycle
M. Saikawa and K. Hashimoto, The Central Research Institute of Electrical Power Industry, Japan ........................................................................................................ 177

Dynamic modelling and simulation of a trans-critical CO₂ heat pump unit
G. Skaugen, SINTEF Energy Research, Norway
M. C. Svensson, Sør-Trøndelag College, Norway ............................................................ 183

Technical Session 4B. CARBON DIOXIDE
Chairman: A. Cavallini, University of Padova, Italy

Expander - compressor for a more efficient use of CO₂ as refrigerant
W.E. Kraus, P. Heyl and H. Quack, Technische Universität Dresden, Germany .............. 195

Theoretical Analysis of Compressing CO₂ in Scroll Compressors
B. E. Fagerli, Norwegian University of Science and Technology, Norway ...................... 204

Heat Transfer Phenomena Inside the Cylinder of CO₂-Compressors and the Influence of their Efficiency
J. Süss and H. Kruse, University of Hanover, Germany .................................................... 214
Technical Session 4C. CARBON DIOXIDE
Chairman: H. Halozan, Graz University of Technology, Austria

Commercial Refrigeration Using CO₂ as Refrigerant - System design and experimental results
P. Neksa and P. A. Schifflie, SINTEF Energy Research, Norway ..................................................... 227

Commercial Refrigeration with Ammonia and CO₂ as Working Fluids
G. Eggen, Gjettum as, Norway
K. Aflekt, Norwegian University of Science and Technology, Norway ........................................... 237

Natural Working Fluids – Military Advantages and Opportunities
A. S. Patil, US Army, USA .................................................................................................................... 247

Development of Carbon Dioxide Environmental Control Unit for the US Army
J. A. Manzione, US Army, USA ............................................................................................................ 251

Technical Session 4D. CARBON DIOXIDE
Chairman: H. Halozan, Graz University of Technology, Austria

Passenger Car Air Conditioning Using Carbon Dioxide as Refrigerant
H. Gentner, BMW AG, Germany ........................................................................................................... 259

Improvement of Mobile Air Conditioning system from point of Global Warming Problems
T. Hirata and K. Fujiwara, DENSO Corporation, Japan ........................................................................ 269

An environmental evaluation of an automobile air-conditioning system with CO₂ verses HFC134a as refrigerant
J. Wertenbach and R. Caesar, Daimler-Benz AG, Germany ................................................................. 279

An Automobile HVAC system with CO₂ as Refrigerant
A. Hafner, J. Pettersen, G. Skaugen and P. Neksa, SINTEF Energy Research, Norway ................. 289

Technical Session 4E. CARBON DIOXIDE
Chairman: H. Kruse, University of Hanover, Germany

Optimal Heat Rejection Pressure in Transcritical Carbon Dioxide Air Conditioning and Heat Pump Systems
S. Liao, Changsha Railway University, China
A. Jakobsen, Technical University of Denmark, Denmark ................................................................. 301

Performance of Autocascade Refrigeration System Using Carbon Dioxide and R134a
S. N. Park and M. S. Kim, Seoul National University, Korea ............................................................. 311

Experimental Evaluation of CO₂ Water Heater
Y. Hwang and R. Radermacher, University of Maryland, USA ......................................................... 321
Technical Session 4F. CARBON DIOXIDE
Chairman: H. Kruse, University of Hanover, Germany

Experimental and Model Comparison of Transcritical CO₂ versus R134a and R410 System Performance
J. Yin, Y. C. Park, D. Boewe, R. McEnaney, A. Beaver, P. S. Hmjak and C. W. Bullard, University of Illinois, USA ................................................................. 331

Comparison of Practical Performance Between CO₂ and R-22 Reversible Heat Pumps for Residential Use
R. Aarlien and P.-E. Frivik, SINTEF Energy Research, Norway ................................................. 341

REEFER 2000 – A New Energy-efficient Reefer Container Concept Using Carbon Dioxide as Refrigerant
M. Kauffeld and K. G. Christensen, Danish Technological Institute, Denmark ......................... 351

Technical Session 5. GAS CYCLES
Chairman: E. A. Groll, Purdue University, USA

An Experimental Investigation on Thermoacoustic Refrigeration
T. Hara, Nippon Institute of Technology, Japan ................................................................. 363

Maximized Performance of Stirling cycle Refrigerators
D. M. Berchowitz, Global Cooling B.V., The Netherlands ...................................................... 373

A Displacer Type Stirling Refrigerator of 100W Refrigeration Capacity with a Nylon matrix Regenerator
M. Sakamoto and T. Yamada, Tokyo Metropolitan University, Japan
T. Ohtaka, Toshiba Corporation, Japan .................................................................................. 381

Technical Session 6A. FUNDAMENTALS
Chairman: K. Watanabe, Keio University, Japan

Literature Survey on Thermophysical Properties of Natural Refrigerants
R. Krauss and K. Stephan, Universität Stuttgart, Germany ......................................................... 391

Computer Subroutines for Rapid Evaluation of Natural Refrigerants Thermodynamic Properties
J. Guilpart, D. Leducq and R. Belance, Cemagref, France ....................................................... 399

Lubricants for Natural Working Fluids
M. C. Watson, CPI Engineering Services Inc., United Kingdom

New Class of Lubricant Oils Soluble in Ammonia
I. G. Chumak, V. P. Onistchenko, V. P. Zhelezny, J. V. Tanchuk, M. M. Detz, V. S. Ovcharenko and V. I. Karev, Odessa State Academy of Refrigeration, Ukraine ............................................ 417
Technical Session 6B. FUNDAMNETALS
Chairman: M. Sakamoto, Tokyo Metropolitan University, Japan

Chemical Heat Pump Using Metal Chloride – Woven Carbon Fibers with Ammonia
T. Dellero, S. De Varzala, D. Sarmeo and P. Touzain, LEPMI, France ................................................. 423

Desiccant Water Adsorption in Ammonia, Carbon Dioxide and Hydrocarbon Systems
F. Broesby-Olsen, Danfoss A/S, Denmark .......................................................... 430

Energy Characteristics of Refrigerating Machine Working with Mixture of Natural Fluids: Carbon Dioxide and Hydrocarbons
M. G. Khmelnuk, J. V. Zmitrochenko and G. K. Lavrenchenko, Odessa State Academy of Refrigeration, Ukraine ................................................................. 433

Technical Session 6C. FUNDAMNETALS
Chairman: M. Sakamoto, Tokyo Metropolitan University, Japan

An Equation of State for NH₃-H₂O Mixtures
B. Mongey, J. T. McMullan, N. J. Hewitt and G. Molyneaux, University of Ulster, United Kingdom .......................................................... 443

Global Phase Behaviour of Natural Refrigerant Mixtures
V. A. Mazur, L. Z. Boshkov and S. V. Artemenko, Odessa State Academy of Refrigeration, Ukraine ................................................................. 451

A Critical Review on Thermophysical Properties of Liquid Secondary Refrigerants
Á. Melinder, Royal Institute of Technology, Sweden .......................................................... 461

Technical Session 7A. SORPTION SYSTEMS
Chairman: G. Owren, Norwegian University of Science and Technology, Norway

District-Heat Exchange Water Evaporator for vapour Absorption Cycle Refrigerators
I. W. Eames, S. Wu and H. Sabir, University of Nottingham, United Kingdom ......................... 473

Solar Assisted Absorption Cooling with Optimized Utilization of Solar Energy
P. Lamp, A. Costa and F. Ziegler, ZAE Bayern, Germany
M. C. Pereira and J. F. Mendes, DER-ITE/INETI, Portugal
J. P. Ojer, Universidad Polytechnica de Valencia, Spain
A. G. Conde and C. Granados, INTA, Spain .......................................................... 483

Design of High Temperature Absorption/Compression Heat Pump
T. Sveine, S. Grandum and H.S. Baksaas, Institute for Energy Technology, Norway .............. 491
Technical Session 7B. SORPTION SYSTEMS
Chairman: G. Owren, Norwegian University of Science and Technology, Norway

Study on the Characteristics of Ammonia – Water Absorption Refrigerator
K. Saito, S. Kimijima and S. Kawai, Waseda University, Japan
T. Takei, Daikin Industries, Japan ................................................................. 503

Water-Ammonia Two-Stage Compressor Thermotransformers
T. Morosuk, L. Morosuk, B. Diassana and V. Tchaikovsky, Odessa State Academy of
Refrigeration, Ukraine .................................................................................. 513

Refrigeration Absorption Cycles with Ammonia-Water Driven by Low Temperature Heat
Sources
M. Valles, D. Boer and A. Coronas, Universitat Rovira i Virgili, Spain ...................... 521

Solubility and Vapor Pressure Characteristics of H2O/(LiBr+LiI+LiNO3+LiCl) System for
Air-Cooled Absorption Chillers
K.-K. Koo, H.-R. Lee and S.-Y. Jeong, Sogang University, Korea
Y.-S. Oh, D.-R. Park and Y.-S. Baek, Korea Gas Corporation, Korea ....................... 531

Technical Session 8A. HYDROCARBONS AND FLAMMABLES
Chairman: H. T. Haukås, Hans T. Haukås AS, Norway

Quantitative Risk Assessment: Hydrocarbon Refrigerants
T. J. Ritter and D. Colbourne, Calor Gas Ltd., United Kingdom .................................. 541

Flammable Refrigerants and Safety Standards
B. Engström, Vattenfall AB, Sweden ..................................................................... 551

Indonesian Experience on Hydrocarbon Application as Refrigerant Substituting the
Phased-out CFC
A. Suwono, N. P. Tandian, A. D. Pasek, T. Hardianto and T.A.F. Soelaiman, Institute of
Technology Bandung, Indonesia ......................................................................... 557

Technical Session 8B. HYDROCARBONS AND FLAMMABLES
Chairman: H. T. Haukås, Hans T. Haukås AS, Norway

Dimethyl Ether as an R-12 Replacement
B. Adamson, Refrigeration Engineering Pty. Ltd., Australia ...................................... 569

Use of Dimethyl Ether in Domestic Refrigerator
I. Kuštrin and A. Poredoš, University of Ljubljana, Slovenia .................................. 576

Commercial Refrigerators and Freezers with Isobutane
P. H. Pedersen, C. S. Poulsen and S. Gundtoft, Danish Technological Institute, Denmark.... 584
Technical Session 8C. HYDROCARBONS AND FLAMMABLES
Chairman: P. Blacklock, Calor Gas Limited, United Kingdom

Experimental Investigation of the Chemical Stability and the System Performance with Cyclopropane as Refrigerant
J. Rogstam, Royal Institute of Technology, Sweden .......................................................... 595

Thermal Evaluation of a Vapor Compression System using R22 and Propane
K. A. R. Ismail, UNICAMP, Brazil
R. N. N. Koury and L. Machado, Federal University of Minas Gerais, Brazil ..................... 605

A Study of a Water-to-Water Heat Pump Using Flammable Refrigerants
W. V. Payne and P. A. Domanski and, National Institute of Standards & Technology, USA
J. Muller, Technical University of Cracow, Poland .............................................................. 615

Compressor Life Tests with HC Refrigerants
S. Devotta, M. M. Kulkami and N. N. Sawant, National Chemical Laboratory, India
P. A. Patil and N. K. Sane, Walchand College of Engineering, India ................................. 625

Technical Session 9. SECONDARY SYSTEMS AND FLUIDS
Chairman: E. Granryd, Royal Institute of Technology, Sweden

A New Secondary Fluid
K. Evenmo, Norsk Hydro ASA, Norway ........................................................................... 635

Testing of a Drop-in Secondary Loop Refrigeration System for Medium Temperature Supermarket Applications
W. T. Horton, E. A. Groll and E. Sharp, Purdue University, USA ........................................ 645

Ice Slurry Accumulation
K. G. Christensen and M. Kauffeld, Danish Technological Institute, Denmark ..................... 655

Use of Pumpable Ice to Minimise Salt Uptake during Immersion Freezing
S. F. Pearson and J. Brown, Star Refrigeration Ltd., United Kingdom ............................... 665

Technical Session 10. AMMONIA
Chairman: J. Bouma, IEA Heat Pump Centre, The Netherlands

Indirect Cooling with Ammonia in Supermarkets
J. Nyvad and S. Lund, Danish Technological Institute, Denmark ......................................... 677

A Modern Reciprocating Compressor, as Efficient as Ammonia
H. H. van der Linden and G. Bastiaansen, Grasso Products BV, The Netherlands ................ 687

What can we Learn from the Shreveport Ammonia Fire?
A. Lindborg, Ammonia Partnership AB, Sweden ............................................................... 696

Dispersion of Ammonia from Safety Relief Valves
D. R. Kuespert and M. K. Anderson, International Institute of Ammonia Refrigeration, USA 704
