### TABLE OF CONTENTS

Students in the Graduate Program of the Civil and Environmental Engineering Department .................................................. 1

Preface

*Michael P. Wolcott and Robert J. Tichy* .......................................................... 3

Composite Materials Hall of Fame ................................................................. 5

Distinguished Service Awards

*Lucille H. Leonhardy* .................................................................................. 7

*Murray G. Sturgeon* ................................................................................. 9

*Alfred H. Schenkmann* ........................................................................ 11

*Otto Suchsland* ...................................................................................... 15

Keynote Address: New Products, New Markets for the 21st Century:
Involving Business and Customers in Product Development

*Norman E. Johnson* ................................................................................ 19

### Session I

**Market Trends and Adding Value**

*Moderator: Arthur B. Brauner*

The Composite Panel Industry: A Global Market Assessment

*Peter A. Drake* ......................................................................................... 29

Added Value Market Opportunities for OSB Structural Panels

*John D. Lowood* ................................................................................... 41

The Changing Face of the Composite Panel Industry: Addressing New Approaches to Market Growth in North America

*Richard L. Margosian* ........................................................................ 45

Strategic Issues in Creating a Customer-Oriented Organization

*John C. Narver* ..................................................................................... 55

Adding Value through Technology Development

*Warren C. Easley* ................................................................................ 65
Session II
Process Control
Moderator: William F. Lehmann

A Noncustom Approach to Blending Systems
*Kneale Quayle and Raymond Turenne* .......................................................... 75

A Novel Approach to Lignocellulosic Utilization for Energy, Chemicals, and Composite Panels
*Kenneth Scott* ................................................................................................. 81

Combined Heat Energy and Emission Control with a Closed Loop Gasification System
*Michael Keller and Daniel J. Young* ............................................................... 87

OSB Quality Enhancement and Cost Reduction
*W. Ernest Hsu and Steve Kirincic* ................................................................. 91

Session III
Equipment Developments
Moderator: Thomas M. Maloney

Preparation and Cleaning of Urban Wastewood
*Alfred H. Schenkmann and Roland W. Jager* ................................................ 103

Compak: Ten Years of Experience with Commercial Straw Particleboard Production
*Graham Heslop* .............................................................................................. 109

Plant Rejuvenation: How Willamette Industries Gave Life to a 1960s Vintage Particleboard Plant
*David C. Smith* ............................................................................................. 115

Flake Quality and Yield in the OSB Industry
*Joseph E. Ciarniello, Ritch P. McDonald, and Richard W. Fodor* ............... 121

Session IV
Adhesive Systems
Moderator: Tina Kolaczyk

Development of a Standardized Laboratory VOC Test Method to Measure Hotpress Emissions
*Brian M. Peek, Bruce M. Broline, Steven C. Tenhaeff, Jeffrey J. Wolcott, Tom C. Holloway, Steve Wendler, and Gregg Hale* ................................................................................................................................. 137

Panels from Annual Plant Fibers Bonded with Urea-Formaldehyde Resins
*Effy Markessini, Edmone Roffael, and Luc Rigal* ....................................... 147

Chemistry of PMDI Wood Binders: Model Studies
*James W. Rosthauser, Karl W. Haider, Robert N. Hunt, and Wendy S. Gustavich* ................................................................. 161

Melamine Urea-Formaldehyde Resins without Formaldehyde Emissions
*Richard M. Rammon* .................................................................................. 177
Technical Forum

Potential Material Sources for Board Products: Used Pallets and Wastewood at Landfills  
*Philip A. Araman, Robert J. Bush, and Vijay S. Reddy*  
189

The Concept of the Satellite Oriented Strandboard Plant  
*John Stulen and George Stastny*  
197

Ultrasound to Optimize Process and Quality Control  
*Greg Kromholtz and Darren Billings*  
197

Model Investigation of Linear Expansion in Wood Composite Panels  
*Wei Xu and Otto Suchsland*  
197

Effect of Press Cycle on the Surface Roughness of Particleboard  
*Salim Hiziroglu and Mark Graham*  
197

Particleboards from Recycled CCA-Treated Red Pine Utility Poles  
*Jacob Munson*  
198

Creep Mechanisms in Oriented Strandboard  
*George W. Hua and Michael P. Wolcott*  
198

Mechanical Properties of Wood Composites Made from Biomass-Derived Phenol-Formaldehyde Resins  
*Xiang-Ming Wang, Michele D. Myers, and Stephen S. Kelley*  
199

Globe Machine Manufacturing Company Plant Layout for I-Beam Manufacture  
*Andrew Johnson*  
199

Waste Paper as a Substitute for Thermomechanical Pulp in Medium Density Fiberboard  
*Edmone Roffael and Brigitte Dix*  
199

An Alternative to Single-Sheet, Two-Pass Systems in the Board Mill  
*Andrew F. Jowett*  
200

The Effect of Furnish Moisture Content, Binder Dosage, and Panel Density on the Physical and Mechanical Properties of Particleboard Bonded with Rubinate*  
*Christopher J. Moriarty*  
200

Optimizing the Manufacture of Particleboard and Medium Density Fiberboard from Annual Plant Fiber  
*Laurence Mott and Ceri Loxton*  
200

Regenerative Catalytic Oxidation of Plywood Veneer Dryer VOC Emissions: A Case Study  
*Sean T. Gribbon*  
201

Case Study: State-of-the-Art Medium Density Fiberboard Plant  
*David M. Brands, Thomas H. Daniels, Carey W. Sovereign, and Kent M. Pope*  
201

Formaldehyde Emissions from Panels Bonded with Amino-Resins  
*Franz Wolf*  
201

Phenol-Formaldehyde Bonded Medium Density Fiberboard  
*Byung-Dae Park and Bernard Riedl*  
201

Infrared Moisture Transmitters for Today’s Fully Automated Panel Plant  
*Robert J. Winson, George Toth, and Brian Cummings*  
202
Operating Experience with Regenerative Thermal Oxidizer Media in Wood Products

Peter McDonald ......................................................... 202

Chemically Modified Soluble Sodium Silicate as an Adhesive for Particleboards

Younis H. Suleman ....................................................... 202

A Major Breakthrough in Blender Tool Life

Reinhard H. Kessing and Doug Moore .................................. 202

Continuous Production of 4-Foot-Wide Laminated Veneer Lumber

Uli Stahl ................................................................. 203

Compaction Behavior of Furnish Materials for Wood-Based Panels

Gernot Haas, A. Steffen, and A. Frühwald ................................ 203

Volatile Organic Compound and Particulate Control Technologies
for Wood Products Operations

Bob Kirkland, Scott Paddock, and Tom Maurer .......................... 204

A Press Monitoring System for Continuous Presses

Bruce Mallas and Steve Kirincic ........................................ 204

Energy and Emission Impacts of Wood Products Dryers

Kevin D. Kaff .......................................................... 204

GreCon/Stenograph Online Density Analyzer

Hermann Staats, Sten Dueholm, and Victor L. Alexander .............. 204

The Influence of Wood Buffer Capacity on the Properties of Particleboard

Iwona Frackowiak ...................................................... 205

New Regenerative Oxidation Technologies for Air Emissions Abatement
from Wood Dryers and Presses

Joseph J. Seiwert, Jr., David Chiles, and John Kirkland ............... 205

A Study of Volatile Organic Compound Emissions from Composite Products

Alpha Barry, Jack Shield, and Diana Corneau ............................ 205

Medium Density Fiberboard from Juvenile Second Growth Eucalyptus in Egypt

S.A.E. Kandeel and I.E. Kherallah ...................................... 206

Appendix

Conversion Factors ...................................................... 209

Session Moderators ..................................................... 213

List of Papers, Authors, and Addresses .................................. 215

Attendees and Addresses ................................................ 217
