Proceedings of the
Petroleum
Hydrocarbons and
Organic Chemicals in
Ground Water
Prevention, Detection
and Remediation
Conference

November 12-14, 1997
Houston, Texas
# TABLE OF CONTENTS

## TECHNICAL PRESENTERS:

### SESSION 1: Keynote

### SESSION 2: MTBE: Occurrence and Remediation
Interagency Assessment of Oxygenated Fuels--The National Science and Technology Council Executive Summary ................................................................. 20
Summary of Tuesday Workshops ........................................................................ 30
Methyl tertiary Butyl Ether (MtBE) Contamination of the City of Santa Monica Drinking Water Supply--Anthony Brown, James R.C. Farrow, Rey A. Rodriquez, and A.J. Bellomo .............................................................. 35
Remediation of a Fractured Clay Soil Contaminated with Gasoline Containing MTBE--
Rick Johnson, Diane Gradey, and Terry Walden ........................................... 60
Remediation of Overlapping Benzene/MTBE and MTBE-Only Plumes: A Case Study--Peggy L. Carpenter* and Carrie Anne Vinch ........................................... 74

### SESSION 3: Risk-Based Corrective Action
Modeling the Impact of RBCA on Overall UST Site Management Costs--Kimberly Davis and Greg Reed .................................................................................. 90
Risk-Based Corrective Actions Begin With Risk-Based Investigations--A Case Study--
Gregory P. Brorby, Amanda Spencer, and Thomas E. Graf ............................. 102
Case Study Comparisons of Vapor Inhalation Risk Estimates: ASTM RBCA Model Predictions Versus Site Specific Soil Vapor Data--Pleasant Jackson McNeel, IV, Valerie Dibley, and Carolyn Atwood .............................................................. 115

### SESSION 4: Poster Session
A Review of Potential Treatment Technologies for the Removal of Methyl tertiary Butyl Ether (MtBE) from Drinking Water--Thomas E. Browne, Joseph S. Devinny, Marshall K. Davis, Anthony Brown, and Rey A. Rodriquez .............................................................. 126
A RBCA Approach to Free-Phase LNAPL Recovery--Don A. Lundy .................. 148
Estimating Leachate Concentrations from Extraction Test Results--Mohammad F.N. Mohsen and Roger H. Page .......................................................... 164
Analytic Determination of Hydrocarbon Transmissivity from Bail-Down Tests--David Huntley ................................................................................ 183
TPH Measurements: The Advantages of Using GC/MS--Robert Haddad and John MacMurphy ............................................................................. 197
Fate and Transport Modeling of Volatile Organic Compounds Using Anaerobic Decay Concept of "Prolonged Half-Life"--Tomas Perina*, Vicki Bao, Kendall D. Kitchings, and Johnny Zheng .......................................................... 207
Soil Contaminant and Exposure Point Concentration Computation Using Voronoi Tessellation Weighted Averaging Approach--Tom A. Pedersen and James LaVelle .......................................................... 221
Derivation of a Reference Dose for a Complex Petroleum Hydrocarbon Mixture—Jill E.
Ryer-Powder, Adrienne LaPierre, and Robert Scofield ........................................... 234
Investigations of Air and DNAPL Entry and Migration in Large Saturated Columns of Fractured
Shale Saprolite—S. Clark Cropper and Larry D. McKay ........................................... 249
Use of Constructed Wetlands for Site Restoration and Ground Water Remediation in Kenai,
Alaska—G. Todd Ririe, Lon D. Drake, and Stephanie S. Olson ................................. 266
Environmental Audits of Exploration and Production Facilities Using Pen-Based Computers and
Data Management Systems—Kevin P. Molloy, Peter J. Shilling, and Steve Cao ........ 280
Dual-Well Recovery System Design for Enhanced DNAPL Production—Andrzej Nazar, Doug
Gray, Tim Oolman, Scott McDougall, Frederic Cell, and Jim Ferguson ....................... 291
In Situ Remediation of a Shallow BTEX Plume Using a Vertical Groundwater Circulation (CGC)
Technology—Richard Desorsiers, Robert Wasp, and Susanne Borchert ..................... 305
Technical Feasibility and Remediation Cost-Effectiveness of In Situ Precipitation of Iron: Case
Study Findings and Implications—Jerry A. Wylie, Lori L. Dandeneau, Gary W. Foss, and
Cindy L. Smith ........................................................................................................... 314
Risk-Based Remediation of Vadose Zone Soils: A Case Study of Hydrocarbon Source Reduction
Using Innovative Soil Venting and Vapor Treatment Technologies to Achieve Corrective Action
Goals—S. Grant Watkins, Donald R. Malone, Douglas C. Downey, Leigh Benson, and Sam A.
Taffinder .................................................................................................................. 329
Investigation of Petroleum Hydrocarbon Release Sites Along the Pacific and Arctic Pipelines Inc.
Pipeline—Gary J. Hamilton, Mark R. Musial, and Terry M. Cook ................................. 346

SESSION 5: Vadose Zone Processes

Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) Degradation in Vadose Zone Soils During
Vapor Transport: First-Order Rate Constants—George E. DeVaull, Robbie A. Ettinger, Joe P.
Salanitro, and John B. Gustafson .............................................................................. 365
Soil Attenuation Model (SAM) for Derivation of Risk-Based Soil Remediation Standards—John A.
An Evaluation of the Vapor Profile in the Vadose Zone Above a Gasoline Plume—Richard C.
Laubacher, Philip Barholomae, Polo Velasro, James Reisinger, Charles Costa ............... 396
Experimental Investigation of LNAPL Transport in the Vadose Zone: Comparison with the
Hydrocarbon Spill Screening Model—Michele M. Simpson, Clinton S. Wilson, James W. Weaver, and
Randall Charbeneau ................................................................................................. 410

SESSION 6A: LNAPL: Models to Improve Recovery and Risk Estimation

Persistence of LNAPL Sources and Relation to Risk—David Huntley* and G.D. Beckett .......... 426
Practically Impractical—The Limits of LNAPL Recovery and Relationship to Risk—G.D. Beckett
and Paul Lundegard ................................................................................................. 442
Characterization and Numerical Simulation in Support of LNAPL Recovery in the Presence of a
Fluctuating Water Table—Paul Mazalan, Mark Lyverse, and Don L. Kuehn ................. 446
Dissolution of BTX and Naphthalene from Residually Trapped Hydrocarbons in Soils and Oily
Wastes—W.G. Rixey*, Sanjay Garg, and Yan Nie .................................................... 461
SESSION 10: Chlorinated Solvents & Soil Vapor Extraction

Processes Affecting Free-Phase Hydrocarbon Removal by Vapor Extraction—Robert J. Frank, David Huntley ................................................................. 722
Vapor Extraction System Closure Criteria for Northern California Sites—Richard Makdisi, Ron Gervason, and Stephan Hill ................................................................. 735
Hydrocarbon Free Product Recovery Using Soil Vapor Extraction (SVE) and Air Sparging—Edward Payne, Helen Hight, Tom Lancaster, and Jeff Brown .............................................. 751
Performance Assessment of In Situ Air Sparging for the Removal of Tetrachloroethylene from a Mildly Heterogeneous Sand Aquifer—Derek W. Tomlinson, Neil R. Thomson, and Rick L. Johnson ................................................................. 759

Surfactant Enhanced Remediation of an Alluvial Aquifer Contaminated with DNAPL—John Londergan, Gary Pope, Chris Brown, and Hans Meinardus .............................................. 774
Subsurface Hydrogen Injection for the In Situ Bioremediation of Chlorinated Solvents—Charles Newell, Todd Fisher, and Joseph Hughes ................................................................. 791
