Critical Loads and Critical Limit Values

edited by

Hannu Raitio and Tuire Kilponen

Proceedings of the Finnish-Swedish Environmental Conference
October 27–28, 1994
Vaasa, Finland

Metsäntutkimuslaitoksen tiedonantoja 513
The Finnish Forest Research Institute. Research Papers 513
Contents

Foreword 4

Sirkka Hautejärvi
Opening of the Conference 6

Markku Luoma
Opening of the Conference 9

Jean-Paul Hettelingh, Peter A.M. de Smet and Robert J. Downing
The critical loads concept and critical loads in Europe 11

Michael Ashmore
Critical levels for forestry in Europe 27

Maximilian Posch
Allocation of critical loads to S and N deposition 36

Wim de Vries, Gert J. Reinds and Maximilian Posch
Assessment of the forested area in Europe at risk under various acid deposition scenarios 48

Staffan Westerlund
The concepts of critical loads and environmental quality standards 66

Kevin Bishop
Critical load models for the regional and local scale: a cautionary scientific perspective 74

Heikki Niininen
Critical load and critical limit values from the standpoint of the energy producer 77

Mats Nebaeus
Critical load and critical limit values from the standpoint of the local administration 81

Reino Lammi
Critical loads and critical limit values from the standpoint of the wood and paper industry 87
Kalervo Mäkelä and Matti Perttilä
Critical loads to the Gulf of Bothnia

Arne Henriksen, Juha Kämäri, Maximilian Posch, Martin Forsius, Anders Wilander and Tatyana Moiseenko
Critical loads for surface waters in Scandinavia and the Kola region

Harald Sverdrup, Per Warfvinge and Kaj Rosén
Critical loads of acidity and nitrogen for Swedish forest ecosystems, and the relationship to soil weathering

Alf Björklund
Critical load and special characteristics of the Quark area of Finland

Håkan Staaf
Critical loads/levels as a tool for implementing national strategies for pollution control

Lennart Mattson
Critical load and critical limit values from the standpoint of the administration

Marketta Karhu
Critical loads and critical limit values from the point of view of local government district environmental authorities

Hannu Ilvesniemi and Michael Starr
The use of the Ca/Al ratio in the calculation of critical loads for forest soils

Remarks of the Moderators

Kaj Rosén
Some aspects on the concept of critical loads
A moderators conclusions

Pirjo-Liisa Nurmela
From the viewpoint of a government environmental officer attending a conference dealing with critical loads

Kari Kuusiniemi
Critical loads and critical limit values
The legal point of view
