

Iterative Methods in Scientific Computation

Third IMACS International Symposium on Iterative
Methods in Scientific Computation
Jackson Hole, Wyoming, USA

Edited by

Junping Wang

Myron B. Allen, III

Benito M. Chen

Tarek Mathew

University of Wyoming, Laramie, Wyoming, USA

Contents

Preface	xii
Part I: Iterative Methods in Computational Linear Algebra	1
Coupled Implementations of Transpose-Free Lanczos and Lanczos-Type Product Methods, <i>Claude Brezinski and Michela Redivo-Zaglia</i>	3
New Look-Ahead Implementations of Lanczos Method for Unsymmetric Systems, <i>Claude Brezinski, Michela Redivo-Zaglia, and Hassane Sadok</i>	9
MGMRES Iterative Method, <i>Jen-Yuan Chen, David R. Kincaid, and David M. Young</i>	15
GGMRES Iterative Method, <i>Jen-Yuan Chen, David R. Kincaid, and David M. Young</i>	21
Near Optimal 2-Stage Runge-Kutta Schemes for Solving a Class of Nonsymmetric Linear Systems, <i>Mei-Qin Chen and Chichia Chiu</i>	27
Harmonic Ritz Values and the Convergence of GMRES, <i>Serge Goossens and Dirk Roose</i>	33
An Adaptive Chebyshev SIM Based on Perturbation Theory, <i>Xiezhang Li</i>	39
Polynomial Acceleration for Restarted Arnoldi Iteration and Its Parallelization, <i>Akira Nishida, Reiji Suda, and Yoshio Oyanagi</i>	45
A Note on BiCGStab(ℓ) Method on AP1000, <i>Takashi Nodera and Yuuichirou Noguchi</i>	53
Implicitly Restarting Lanczos, <i>Gorik De Samblanx and Adhemar Bultheel</i>	59
Numerical Computation of the Jordan Canonical Form, <i>Toshio Suzuki and Emiko Watanabe</i>	65
Overview on Lanczos-Type Iterative Linear Solvers, <i>Rüdiger Weiss</i>	71

Part II: Iterative Methods in Numerical Simulation	77
A Generalized Godunov Method for Enhanced Oil Recovery Processes with Microbial Permeability Modification in 1-D Coreflood Models, <i>Benito M. Chen, Junping Wang, and Shaochang Wo</i>	79
Numerical Methods for Three Models of Compositional Flow in Porous Media, <i>Zhangxin Chen and Richard E. Ewing</i>	85
Numerical Simulations and Application of Homogenization Analysis to Contaminant Transport Processes, <i>Alpana M. Desai and Benito Chen</i>	91
A Numerical Compaction Model, <i>John George and Henry Heasler</i>	97
Iterative Solution of Singularly Perturbed Problems by Approximate Factorization, <i>Eldar Giladi and Joseph Keller</i>	103
Characterization and Upscaling of Sedimentary Depositional Formations using Archetypal Analysis and Homogenization, <i>Joe Koebbe, Laura Watkins, and Ryan Thomas</i>	111
A Linear Direct Scheme for Non-Stationary Navier-Stokes Equations, <i>Yaqing Li and Benito Chen</i>	117
Groundwater Transport with Stochastic Retardation, <i>Patrick O'Leary, Myron B. Allen, and Frederico Furtado</i>	123
A Biofilm Growth Model for a Porous Medium, <i>Sunil K. Tiwari and Kenneth L. Bowers</i>	129
New 3D parallel GILD modeling and nonlinear inversion, <i>Ganquan Xie and Jianhua Li</i>	135
Part III: Multigrid Methods with Applications	141
Multigrid Methods for the Conforming and Nonconforming Plate Finite Elements, <i>Qingping Deng and Xiaobing Feng</i>	143
Numerical Simulation of Flames Using Multigrid Methods, <i>Craig C. Douglas, Alexandre Ern, and Mitchell D. Smooke</i>	149
Algebraic Multigrid Methods - A Comparison, <i>Jürgen Fuhrmann</i>	155
Operator Trigonometry of Wavelet Frames, <i>Karl Gustafson</i>	161

Numerical Simulation of Sea Scattering by the Multigrid Method in Helmholtz Integral Form, <i>Hwar C. Ku and Denis J. Donohue</i>	167
A Multi-Level Method for an Inverse Problem, <i>Tao Lin</i>	173
Solving Nonlinear Heat Conduction Problems with Multigrid Preconditioned Newton-Krylov Methods, <i>William J. Rider and Dana A. Knoll</i>	179
Multilevel Methods Using Exponential Test Functions on Triangles for Convection-Diffusion Problems, <i>Gerhard Starke</i>	185
Wavelet-like Bases for Integral Equations on Surfaces with Complex Geometry, <i>Johannes Tausch and Jacob White</i>	191
Part IV: Domain Decomposition Methods with Applications	197
The Schwarz Method for Variational Inequalities with Application, <i>Lori Badea and Junping Wang</i>	199
Error Analysis of Overlapping Mortar Element Methods for Elliptic Problems, <i>Xiao-Chuan Cai, Maksymilian Dryja, and Marcus Sarkis</i>	205
Space-Time Domain Decomposition for Advection Diffusion Problems, <i>Eldar Giladi and Herbert Keller</i>	211
An Overlapping Additive Schwarz Method for a Saddle Point Problem from Linear Elasticity, <i>Axel Klawonn and Luca F. Pavarino</i>	219
Pricing American Options by Domain Decomposition Methods, <i>Mingjun Liu and Junping Wang</i>	225
Parallel Function Decomposition Methods and Numerical Applications, <i>Xue-Cheng Tai</i>	231
Mortar Mixed Finite Element Methods on Irregular Multiblock Domains, <i>Ivan Yotov</i>	239
Part V: Discretization Techniques	245
How to Avoid Slave Points in Adaptive Refinement Procedure? <i>Owe Axelsson and Mariana Nikolova</i>	247

Accurate Local Time Stepping Algorithms for Solving Partial Differential Equations, <i>Lilun Cao and Jianping Zhu</i>	253
Convergence of Numerical Solutions to the Allen–Cahn Equation, <i>Xinfu Chen, Charlie Elliott, Andy Gardiner, and Jennifer Zhao</i>	259
Expanded Hybrid Formulations for Numerical Solution of Plate Bending Problems, <i>Zhangxin Chen</i>	267
The Resolution of the Gibbs Phenomenon for “Spliced” Functions in One and Two Dimensions, <i>Anne Gelb and David Gottlieb</i>	275
Numerical Approximation of a Nonlinear Problem with a Signorini Boundary Condition, <i>Raphaèle Herbin and Emmanuelle Marchand</i>	283
Continuous Numerical Solutions with a Priori Error Bounds for Second Order Time Dependent Partial Differential Systems, <i>Lucas Jódar, Pedro Almenar, and Daniel Goberna</i>	289
The Weighted Continuous Galerkin Method, <i>Maha Nabhan and Bruce A. Wade</i>	295
Approximation of Eigenvalues of the Dirichlet Laplacian on a Fractal Drum, <i>John W. Neuberger and Robert J. Renka</i>	301
A Locking Free Mixed Finite Element Method for the Koiter Shell Model, <i>Tong Sun</i>	307
The Travelling Wave Scheme for the Navier-Stokes Equations, <i>Suzanne L. Weekes</i>	313
Global Superconvergence for Finite Element Approximate Solutions of Maxwell’s Equations in \mathbf{R}^3 , <i>Ningning Yan</i>	319
An Augmented Lagrangian Mixed Finite Element Scheme for Saddle Point Problems, <i>Daoqi Yang</i>	325
Fourth-Order Compact Discretization and Iterative Solution of the 3D Convection-Diffusion Equation, <i>Jun Zhang</i>	331
Part VI: Preconditioned Iterative Methods	337
Block MILU Preconditioning, <i>Robert Beauwens</i>	339

A Direction Set Based Algorithm for Solving a Class of Adaptive Least Squares Problems, <i>Mei-Qin Chen</i>	351
A Preconditioned Richardson Method for Thermal Analysis in X-ray Irradiated Photoresists, <i>Weizhong Dai and Raja Nassar</i>	357
On the Stationary and Non-Stationary Extrapolation Iterative Methods, <i>Daoud S. Daoud</i>	363
Convergence Acceleration of Preconditioned Indefinite Systems for Second Order Elliptic Boundary Value Problems, <i>Xiaohong Ding and Rosemary A. Renaut</i>	369
The Vector \mathcal{J} Extrapolation Method, <i>Herbert H. H. Homeier</i>	375
Iterative Methods and Infinite Acceleration for Nyström Solver of Integral Equations, <i>Qun Lin</i>	381
Optimal ρ Parameter for the Three Dimensional ADI Iteration for the Three Dimensional Real Helmholtz Equation, <i>Sangback Ma</i>	385
Preconditioned Newton-GMRES Methods for the Compressible Navier-Stokes Equations, <i>Tiana Tefy and Pénélope Leyland</i>	391
A Parallel ILU-Preconditioner, <i>Kees Vuik and Ronald R. P. van Nooyen</i>	399
