CONTENTS

Structural Design of a Tall Building with Elasto-plastic Steel Dampers for the Attenuation of Torsional and Lateral Motions  
(Y. Kurokawa, M. Sakamoto, T. Yamada, H. Kurino and A. Kunisue) ........................................................................733

Passively Response Controlled High-rise Building - The Kawada Headquarters Project  
(S. Ishimaru, T. Niiya, H. Otsuka, E. Ehara, R. Miyao and R. Marukawa) .................................................................741

The Kinetic Skyscraper: A Proposal for the Smart Design of a Landmark Super Tall Building for Chicago's Lakefront  

Verification Test and Response Observation of a Building with Tuned Roller Pendulum Damper System  
(K. Yasui, N. Kawai and S. Otsuka) ..........................................................................................................................759

4.2 Active, Semi-active and Hybrid Control Systems

Vibration Control System of Multi-structure Connection and its Optimal Design  
(J. Teng and J. Liu)................................................................................................................................................767

Experimental Study of an Active Mass Damper with Variable Gain Control Algorithm  
(M. Yamamoto and Y. Suzuki) ..................................................................................................................................775

Application of Active Mass Damper (AMD) System, and Earthquake and Wind Observation Results  
(M. Higashino, S. Aizawa, M. Yamamoto and K. Toyama) .......................................................................................785

Large Scale Hybrid Mass Damper Using AC-servomotor for Vibration Control of Tall Building  
(Y. Nakamura, K. Tanaka, M. Nakayama, H. Hora and T. Fujita) ..............................................................................795

Analytical Study on a High-rise Building with the Active Variable Stiffness System  
(T. Nasu, T. Kobori, M. Takahashi and A. Kunisue) ..............................................................................................805

Application of Semi-active Damper System to an Actual Building  
(N. Niwa, T. Kobori, M. Takahashi, Y. Matsunaga, N. Kurata and T. Mizuno) .............................................................815

SECTION 5 - BRIDGE DYNAMICS AND CONTROL ....................................................... 825

5.1 Control of Bridges under Wind Action

Effects of Leading Edge Stabilizer on the Aerodynamic Stability of Cable-stayed Bridge  
Section (S. Miyachi, M. Yoneda and K. Edamoto) ....................................................................................................827

Vertical Gust Response Control of Long Span Cable-stayed Bridge under Cantilever Construction by Active Mass Damper  
(T. Takeda, Y. Niihara, M. Ohshio, R. Nakano, F. Kozuma and A. Ogawa) .............................................................835

New Idea on the Aero-elastic Coupled Behavior Control of the Super Long Span Bridges  
(T. Miyata and H. Yamada) ......................................................................................................................................843

Active Control of Long Bridges Using Flaps  
(H.I. Hansen and P. Thoft-Christensen) .....................................................................................................................851

Cable Net System (CNS) Design of Cable-stayed Bridge to Control Cable Vibration by Using Quality Control Techniques  

Direct Model Reference Adaptive Control for Nonlinear Hydrodynamic Oscillations  
(R. Ghanem and V. Gattulli) ..................................................................................................................................869
5.2 Base-isolated Bridges

Nonlinear Hysteretic Interaction between Device and Pier in an Isolated Bridge
(K. Kawashima and G. Shoji) ................................................................. 877

Experimental Study on Isolation System with Friction Damping for Bridge Structures

Design Method of Isolated Highway Bridges in Japan
(K. Kawashima and S. Unjoh) .................................................................. 895

Analytical Study on Non-linear Seismic Response Behavior of Seismic Isolator and Bridge Column System (Y. Adachi, S. Unjoh and M. Koshitoge) .................. 903

Seismic Evaluation of an Actual Bridge with Isolator by Vibration Tests
(Y. Ando, M. Sakakibara, S. Yamanobe and N. Ohbo) .................................. 913

Hybrid Seismic Isolation of Bridge Structures
(M.D. Symans and S.W. Kelly) ............................................................... 923

5.3 Control of Bridges under Seismic Action

Reduction of Earthquake Induced Effects of Pounding in Elevated Bridges
(R. Jankowski, K. Wilde and Y. Fujino) ...................................................... 933

Control of Seismic Energy Partitioning of Bridge Piers with Sliding Rubber Bearing
(H. Iemura, Y. Takahashi and Y. Chen) ..................................................... 941

Seismic Performance of Tuned Mass Dampers Attached to Towers of a Suspension Bridge
(K. Megawati and H. Higashihara) ......................................................... 949

Seismic Response Control of Long Cable-stayed Bridges
(F. Paulet-Crainiceanu) ......................................................................... 959

Non-linear Seismic Response Analysis of Long Span Bridges
(K. Morishita, N. Sasaki, S. Uehira and T. Yamamoto) .............................. 965

5.4 Response and Control of Bridges

Feasibility Study: Control of a Cable-stayed Bridge Model, Part 1: Problem Definition
(A.G. Schemmann, H.A. Smith, L.A. Bergman and S.F. Dyke) .................. 975

Vibration Control of a Foot-bridge Using Tuned Mass Damper
(A. Hatanaka, M. Nanjo, T. Yokotani, A. Hirose and A. Taya) .................... 981

Magneto-rheological Fluid Dampers for Control of Bridges
(F. Gordaninejad, M. Saiti, B.C. Hansen and F.-K. Chang) ....................... 991

Model Experiments of Active Control for Traffic-induced Vibration of Girder Bridge
(M. Kawatani, K. Mitani, Y. Yamada and Y. Kobayashi) ............................ 1001

Decentralized Model Reference Variable Structure Control of Multi-cable-stayed Bridges
(N. Luo, J. Rodellar, M. de la Sen and M.E. Magaña) ............................... 1011

Design of Active Control Scheme for a Flexible Bridge Tower Structure Using H-infinity Optimal Control (I.N. Kar, K. Seto and F. Doi) ......................................................... 1021

Theoretical and Experimental Studies on Vibration Control of Sag Cables in Cable-stayed Bridges by Oil Damper (Y. Xu, S. Zhan, Z. Yu and J. Ko) .................. 1031
SECTION 6 - BASE ISOLATION AND VIBRATION CONTROL

6.1 Vibration Control of Buildings

The Current State of Base Isolation in the United States
(J.M. Kelly) ................................................................. 1043

Reduction of Structural Vibrations due to Impediment of Soil Excitations
(N. Chouw) ................................................................. 1053

System Design and Performance Verification Test for Vibration Isolation System (VIS)
(T. Kobayashi, Y. Naito and T. Ishibashi) ........................................... 1063

An Analytical and Experimental Study of Active Isolated System

Vibration Control of Equipment Using High Damping Rubber
(T. Inaba, H. Dohi, K. Okuta, T. Sato and H. Akagi) ........................................... 1083

An Experimental Study on the Restoring Characteristics of the Friction Damper with Coned Disc Springs for Base Isolation System
(S. Inaba, T. Nakamura and T. Suzuki) ........................................... 1093

Shaking Table Test on the Seismic Response of Nonstructural Systems Mounted on Base Isolated Buildings
(R. Marsantyo, T. Shimazu, H. Araki and K. Kabayama) ........................................... 1101

6.2 Seismic Isolation: Analytical Aspects

Dynamic Behavior of Base Isolation System Considering Vertical Component of Earthquake Excitation
(K. Asano, S. Matsuda, R. Umino, T. Yoshiki) ........................................... 1111

Research on Performance of Base Isolated House
(M. Iiba, H. Yamanouchi, M. Midorikawa, S. Yamaguchi, Y. Ohashi and M. Takayama) .......... 1119

Seismic Response Control of Underground Structures Using Seismic Isolation Design Concept
(S. Unjoh, J. Hoshikuma, K. Nagaya, K. Murai and T. Suzuki) ........................................... 1127

Simplified Analytical Approaches for Seismically-isolated Buildings Subjected to Impulsive
Ground Motions
(P.W. Clark, J.M. Kelly and I.D. Aiken) ........................................... 1137

6.3 Seismic Isolation: Response, Design

Evaluation of Base Isolation Systems Based on Recorded and Predicted Responses of Actual Buildings under Recent Earthquakes
(T. Shimazu) ................................................................. 1145

Observed Records and Dynamic Analysis of a Base-isolated Building for Hyogo-ken Nambu Earthquake
(K. Izawa, Y. Onishi, E. Tachibana and Y. Inoue) ........................................... 1153

Shaking-table Tests on Super Long-period Seismic Isolation Systems for Near-source Earthquakes
(A. Bakhshi, H. Araki and T. Shimazu) ........................................... 1161

Earthquake Response Characteristics of Super-multi-span Continuous Menshin Bridges and the Seismic Design
(M. Ohsumi and S. Unjoh) ................................................................. 1171

SECTION 7 - APPLICATIONS TO CRITICAL STRUCTURES ........................................... 1181

Seismic Protection Using ER Damping Walls
(H.P. Gavin and R.D. Hanson) ................................................................. 1183
Applications of Passive and Hybrid Structural Control Using Architectural Cladding Systems for Critical Structures  
(B.J. Goodno, A.J. Calise and J.I. Craig) .................................................. 1191
Distributed Sensing and Control of Flexibly Supported Lifelines  
(R.J. Helgeson and T.-T. Soong) ................................................................. 1201

SECTION 8 - SENSORS

- Measuring of Dynamic Bending Strain of Structure Subjected to Dynamic Load by Using a Couple of Vibratory Gyroscope  
  (M. Tamura, S. Yamamoto, A. Sone and A. Masuda) ................. 1213
- Measurement of Jerk of Structures Using the Combined System of Vibratory Gyroscope and Cantilever Utilized in the Health Monitoring of Structures  
  (S. Yamamoto, A. Sone, A. Masuda and M. Tamura) ........................................ 1221
- Development and Implementation of Innovative Optical Fiber Sensors for Monitoring Civil Structures  
  (M.Q. Feng) .................................................. 1231
- Development of Servo-type Velocity and Displacement Sensor for the Vibration Control of Flexible Structures  
- Structural Vibration Control for Bridge Tower Model Using a New Servo-type Vibration Sensor  
  (F. Doi, Y. Gatade and K. Seto) ................................................................. 1251

SECTION 9 - MOTION AND VIBRATION CONTROL

9.1 Motion and Vibration Control - 1

- Control of Seismic and Operational Vibrations of Rotating Machines Using Semi-active Mounts  
  (R. Rana and T.T. Soong) .................................................. 1263
- Optimal Damper Placement in Shear-flexural Building Models  
  (I. Takewaki and K. Uetani) ................................................................. 1273
- Application of Hybrid Mass Damper with Convertible Active and Passive Modes Using AC-servomotor to Tall Building  
  (H. Hora, T. Omi, H. Miyano, N. Takahashi, Y. Hitomi and T. Fujita) .................. 1283
- Semi-active Mass Damper for Vibration Control of Long-span Slabs Using Electro-rheological Fluid  
  (O. Furuya, S. Fujita, N. Masaki, M. Ohta, T. Aramizu and T. Sakamoto) ............ 1293
- Control of Cable Vibration through Interaction among Main and Secondary Cables  
  (Md. Alauddin and H. Yamaguchi) .................................................. 1303
- Control of Oscillations by a Tuned Mass Damper in Presence of Flow Structure Interaction Phenomena  
  (V. Gattulli) .................................................. 1313

9.2 Motion and Vibration Control - 2

- An Overview of Reliability Assessment and Control for Design of Civil Engineering Structures  
  (R.V. Field Jr., K.M. Grigoriadis, L.A. Bergman and R.E. Skelton) .................... 1321
- Experimental Study of Active Structural Control with Model and Controller Reduction  
  (H. Li, Y. Suzuki, M. Yamamoto, G.-H. Bae and T. Araki) .................................. 1329
Active Suspension Control of Elastic Car Model on the Bumpy Road
(Y. Kawagou, K. Kodaka, D. Katou and K. Seto) ................................................................. 1339

SECTION 10 - BENCHMARK TESTS OF BUILDINGS .......................................................... 1349

10.1 Benchmark Tests of Seismic-excited Building: Active Control
(Special Theme Session)

Next Generation Benchmark Control Problem for Seismically Excited Buildings
(B.F. Spencer Jr., R.E. Christenson and S.J. Dyke) ............................................................... 1351
Design of Robust Control Law to Control the Vibration of the 20 Story Benchmark Building in
Response to Earthquakes (K. Seto, Y. Matsumoto, F. Doi and I.N. Kar) ......................... 1361
Robust Vibration Control Methods Accommodating Disturbance
(K. Yoshida, T. Watanabe and S. Yoshida) ................................................................. 1371
Sliding Mode Control of Los Angeles 20-story Benchmark Structure
(E.E. Matheu, L.M. Moreschi and M.P. Singh) ................................................................. 1381
Control Algorithm and Sensor Location
(M. Battaini, F. Casciati and L. Faravelli) ................................................................. 1391
Robust Vibration Isolation Control for a Seismically Excited Building
(H. Nishimura and A. Kojima) ................................................................. 1399

10.2 Benchmark Tests of Wind-excited Building: Active Control
(Special Theme Session)

A Benchmark Problem for Response Control of Wind-excited Tall Buildings
(J.N. Yang, J.-C. Wu, B. Samali and A.K. Agrawal) ............................................................. 1407
Frequency Domain Optimal Control of the Benchmark Wind-excited Building
(G. Jin, Y. Chi, M.K. Sain and B.F. Spencer Jr.) ............................................................. 1417
A $H_\infty$ μ Robust Vibration Control Method Applied to the Benchmark Building
(T. Watanabe and K. Yoshida) ................................................................. 1427
Controllers with Quadratic Stability and Performance for the Benchmark Problem of Wind-
Sliding Mode Control for Wind-excited Benchmark Problem
(J.C. Wu and J.N. Yang) ................................................................. 1445

10.3 Benchmark Tests of Buildings: Passive and Semi-active Control
(Special Theme Session)

Seismic Protection of a Benchmark Building Using Magnetorheological Dampers
(S.J. Dyke) ................................................................. 1455
A Study on Optimum Design of Joint Dampers Connecting Two Towers: The Case of
Connecting Two Same Height Towers at Multiple Points (M. Kageyama, Y. Yasui, T.
Suzuki and K. Seto) ................................................................. 1463
Wind Induced Motion Control of a 76 Storey Building by Liquid Dampers
(B. Samali, K. Kwok and H. Gao) ................................................................. 1473
Passive Damper Control for the 76-story Wind-excited Benchmark Building
(A.K. Agrawal and J.N. Yang) ................................................................. 1481

SECTION 11 - SEISMIC RESPONSE CONTROL ........................................... 1491

11.1 Evaluation of Control Concepts

Dynamic Response Control of Real Size Structural Systems with Active Mass and Joint
Dampers  (H. Iemura, A. Igarashi and Y. Inoue) ...................................... 1493
Seismic Response of a Full Scale Structure with Added Viscoelastic Dampers
(K.C. Chang and Y.Y. Lin) ........................................................................ 1501
Application of Amplification Mechanisms for Seismic Response Control of Structures
(M. Kubota, S. Ishimaru, T. Niiya, I. Hata and A. Oba) .............................. 1511
Effect of Impact Vibration Absorber with Hysteresis Damping to Nonstationary Random
Excitation  (S. Aoki and T. Watanabe) ...................................................... 1521
Controlling Seismic Damage in Steel Bridges by Low Yield Point Steel (LYPS) Energy
Absorbing Devices  (Y. Zheng, M. Abe, Y. Fujino and K. Wilde) ................. 1529

11.2 Adaptive/Nonlinear Control Approaches

Nonlinear Controller Using Variable Damping Devices for Tall Buildings
(T. Hatada and H.A. Smith) ....................................................................... 1539
Model Reference Adaptive Control on Soil-structure Interaction Systems under Earthquake
Disturbances  (K. Baba, N. Yabushita, N. Kasumoto, H. Murakami and Y. Inoue) 1549
A Comparison of Control Algorithms for Active Interaction Control of Civil Structures
(W.D. Iwan and L.-J. Wang) ..................................................................... 1559
Non-stationary Vibration Control for Buildings by Using Time-varying Criterion Function
(K. Yoshida and T. Watanabe) ................................................................. 1567
Variable Feedback Gain Based Active Structural Control Accounting for AMD Constraints
(Y. Nitta and A. Nishitani) ...................................................................... 1577
Real-time Model Predictive Control of Structures under Earthquakes
(G. Mei, A. Kareem and J.C. Kantor) ....................................................... 1585

11.3 Improved Control Algorithms

Complete-feedback Control for Tall Buildings under Earthquake Excitations by Active Tuned
Mass Damper (A-TMD)  (Z.-X. Li) ......................................................... 1595
Optimal Stochastic Control of Intelligent Structures
(J.D. Lee, S. Shen, M.T. Manzari and Y.-L. Shen) .................................... 1605
Development of Actual Size Semi-active Hydraulic Damper for Large Earthquakes

11.4 System Response Control

Control of Earthquake-induced Torsional Vibrations in Asymmetric Buildings
(R.K. Goel) ............................................................................................. 1623
Inelastic Behaviors of Asymmetric Frame Structures Introduced Inter-story Hysteretic Dampers
(T. Yamashita, Y. Mukai, E. Tachibana and Y. Inoue) .................................................................1631
Three-dimensional Analysis of Viscous Damper System for Seismic Retrofit of R.C. Building
(H. Chang, J.C. Jeing, H. Moritaka and I. Shimoda) .................................................................1639

11.5 Conceptual Applications of Control

A Study on Seismic Retrofitting Techniques to Existing R/C Buildings by Means of Damper
(K. Kitajima, H. Ageta, M. Nakanishi and H. Adachi) .................................................................1647
Aseismic Roof Isolation System: A Feasibility Study with 13-story Building
(R. Villaverde) .........................................................................................................................1657
A New Concept on Live Load Balance Strategy for Smart 3-D Seismic Base Isolation Design
Optimal Seismic Response Control of Structural Systems Using Poly-linear Type Hysteretic
Damper (H. Nakagawa and K. Asano) ......................................................................................1677
Passive Seismic Control of Bridges by Hysteretic Device Systems
(U.E. Dorka, E. Flygare and A. Ji) ..........................................................................................1687
On the Multi-mode Vibration Control of Piping System
(T. Minowa, K. Seto, F. Iiyama and H. Sodeyama) .................................................................1695
A Passive Structural Control System for Seismic Resistance of Shear Wall Structures with
Application (X. Lu, H. Jiang, X. Wu and L. Lu) .......................................................................1705

SECTION 12 - WIND-INDUCED RESPONSE CONTROL .................................................1715

12.1 Control of Wind-induced Motions - 1

A Practical Design Method for Controlling Wind-induced Vibration of Tall Buildings Using
Passive Dynamic Absorbers (W. Qu and C.-C. Chang) ...............................................................1717
Analysis, Design and Implementation of an Active Mass Damper for a Communication Tower
(A.M. Reinhorn, T.T. Soong, R.J. Helgeson, M.A. Riley and H. Cao) .......................................1727
The Wind Vibration Control of Tower Supporting Long Span Power Lines with Ultra High
Voltage Electricity (J. Tang, B. Huang and L. Li) ........................................................................1737
Suppression of Coupled Flutter of a Bridge Deck by Tuned Pendulum Damper
(T. Okada, K. Honke, K. Sugii, S. Shimada and H. Kobayashi) .............................................1747
Active Vibration Control of Air Traffic Control Tower at Inchon International Airport under
Wind Excitation (H.M. Koh, K.S. Park, W. Park, K.S. Park and Y.S. Kim) ..........................1757
Wind Resistant Design of Meiko Central Bridge (Y. Suzuki, K. Mizuguchi, Y. Hiyama, M. Mizo,
T. Kondo, T. Kawakami and H. Katsuura) ............................................................................1767

12.2 Control of Wind-induced Motions - 2

Response Control Performance of Active-passive Mass Damper Applied to Slender Tall
Kamada) ..................................................................................................................................1777
Structural Control System on the Aerodynamic Behavior of Super-long Span Suspension
Bridges (M. Miyazaki, K. Kazama and H. Kubota) .................................................................1787
