Jörg Desel, Andreas Oberweis, Wolfgang Reisig, Grzegorz Rozenberg (editors):

Petri Nets and Business Process Management

Dagstuhl-Seminar-Report; 217
05.07.1998 - 10.07.1998 (98271)
Contents

1 Changing Workflows: On the Interplay Between Flexibility and Support 5
2 Information Models and Guidelines of Modelling (GoM) 7
3 Petri Nets and Business Processes 9
4 Management-Oriented Models of Business Processes 10
5 Computer Supported Reengineering of Business Processes 11
6 Simple Workflow Models for Complex Business Processes 12
7 An Architecture for Generic Market Services 13
8 Computational Media - Metaphor, Model and Architecture 14
9 Process Validation by Process Net Generation 15
10 Workflows, Scenarios, and Composition 16
11 Using Workflows to Structure Systems Based on Object-Oriented Coloured Petri Nets 17
12 Action Logic for Modelling Workflows 18
13 Workflow-Modelling in NetCASE 19
14 Performance Analysis of Business Processes 20
15 Guidelines of Using Petri Nets for Business Process Management 21
16 Object-Orientation and Business Processes - An Approach for Integrating UML and EPC 22
17 BPM - A Management Perspective 23
18 Object-oriented Business Modeling 24
19 Business Rules Layers Between Process and Workflow Modeling 25
20 Towards Business Process Modeling in KCPM 27
21 Do Petri Nets Provide an Adequate Basis to Decently Model Business Processes? 28

22 Aspects of Modeling Business Processes 29

23 Object-Oriented and Net-Based Modeling of Business Processes 30

24 Are Stochastic Petri Nets a Suitable Tool for Modeling Business Processes? 31

26 Topic Session 1: What is Business Process Management? 33

27 Topic Session 2: Important Application Problems of BPM 34

28 Topic Session 3: Important Topics in Foundational Issues of Business Process Management 36

29 Topic Session 4: Petri Nets and Other Models in Practical Use 39
