Proceedings
of the

SEVENTY-FIRST
ANNUAL CONGRESS

HELD AT DURBAN AND MOUNT EDGECOMBE
2 TO 4 JUNE 1997

South African Sugar Technologists’ Association

SOUTH AFRICAN SUGAR ASSOCIATION EXPERIMENT STATION
PRIVATE BAG X02, MOUNT EDGECOMBE, KWAZULU-NATAL, 4300, RSA
TEL (031) 593205  FAX (031) 595406

PRICE FOR EXTRA COPIES R65,00
(excluding postage/packaging)
CONTENTS

Officers of the South African Sugar Technologists’ Association ................................................................. v
List of Members and Guests .............................................................................................................................. vi
Presidential Address and Welcome ... Mr GB O’Reilly ix
Great Expectations – 1994; Delivery – 1997 ......................................................... Mr Vic van Vuuren, General Manager: Human Resources, Sanlam, Cape Town x
South African Sugar Association Chairman’s Reply .......................................................... Mr AJ Ardington xiii
The Indian sugar industry: a complex, yet increasingly prominent force in the world sugar scene ............... Mr DM Sawhney, Chairman, International Society of Sugar Cane Technologists
A commentary on agricultural research and development in southern Africa ......................... Dr PA Donovan xxiv

AGRICULTURAL

Yield decline research in the Australian sugar industry ................................................................. AL Garside
The concept of soil quality and its applicability to sugarcane production ..................................... RJ Haynes
Modelling the impacts of grassland, forestry and sugarcane on run-off at the Umzinto research catchments .......... JC Smithers, RE Schulze and EJ Schmidt
Soil degradation - I: Effect of fertiliser use on penetrometer resistance .... R van Antwerpen and JH Meyer
The influence of drought on cane quality and yield, and its effect on the current cane payment system in Zimbabwe ................................ B Matibiri
Green cane harvesting at Mkwasine Estate, Zimbabwe .......... M Murombo, E Takavarasha and J Wiseman
Review of near infra-red spectroscopy research in the South African sugar industry ................. JH Meyer
Economic fertiliser recommendations for sugarcane in KwaZulu-Natal, incorporating risk quantification using the KYNOCANE computer program ......................... A Prins, JJ Bornman and JH Meyer
The SASEX Fertiliser Advisory Service: over 40 years’ service to the South African sugar industry ............... JH Meyer, AB Tucker and RA Wood
Recent developments for the control of Cyperus species in the South African sugar industry ................ NB Leibbrandt

The identification of potential genetic markers in sugarcane varieties for the prediction of disease and pest resistance ratings ........................................... JM Barnes, RS Rutherford and FC Botha 57
Neural networking increases the effectiveness of near infra-red predictive models for the selection of Eldana saccharina (Lepidoptera: Pyralidae) resistant sugarcane phenotypes ......... RS Rutherford, NA Coetzee and MG Keeping 62
Integrated control of the black maize beetle, Heteronychus licas (Scarabaeidae: Dynastinae), in sugarcane in the south-east lowveld of Zimbabwe ........................................ R Mazodze 67

AGRICULTURAL SHORT COMMUNICATIONS

Impacts of sugarcane production on water resources ................................................................. EJ Schmidt 73
Grid-based soil loss modelling using a Geographic Information System ................................. MG Wallace 76
Factors to consider when implementing a fully mechanised sugarcane harvesting system .......... E Meyer 79
Changes in the components of cane and sucrose yield in response to drying-off before harvest ............... MJ Robertson and RA Donaldson 82
Eldana saccharina (Lepidoptera: Pyralidae) in Africa: are there different biotypes? .............. DE Conlong 83
Antibiotic resistance of sugarcane varieties to Eldana saccharina (Lepidoptera: Pyralidae) indicated by diet-incorporation bioassays ......................... MG Keeping 84
Biological control of Eldana saccharina (Lepidoptera: Pyralidae) in sugarcane in South Africa: 15 years of constructive research ......................... DE Conlong 86
Parasitoids of the sugarcane spotted borer, Chilo sacchariphagus (Lepidoptera: Pyralidae), in Mauritius .............. S Ganeshan and A Rajabalee 87
Research strategies for the use of insecticides to control sugarcane pests in South Africa .......... GW Leslie 87
Impact of ecology and host plant shifts of Eldana saccharina (Lepidoptera: Pyralidae) on its biological control in graminaceous crops .............. DE Conlong 91
Surveying whitegrub (Scarabaeidae) larvae in the South African sugar industry ......................... MJ Way 95
On the use of furfural to control nematodes in sugarcane ......................................................... VW Spauld 96

Proc S Afr Sug Technol Ass (1997) 71
Further evidence of the effects of ratoon stunting disease on production under irrigated and rainfed conditions ..................................... RA Bailey and GR Bechet 97

Preliminary evidence for the association of a phytoplasma with yellow leaf syndrome of sugarcane in Africa ................................................ CPR Cronje, A Tymon, P Jones and RA Bailey 102

FACTORY

Seventy-second annual review of the milling season in southern Africa (1996-1997) ...................... GREL Lionnet 109

Soil in cane: its measurement, its effect on milling, and methods of removal ............ A Wienese and MJ Reid 130

Automation of the Sezela weighbridge ................................................................. AB Simpson and S King 135

Replacement of sulphur burner with liquid sulphur dioxide system at the Malelane refinery .... M Moodley, DJ Bekker, PJ Pienaar and R Pillay 142

Ion exclusion chromatography: molasses pretreatment and high test molasses production .................................................. SB Davis, SD Peacock and SN Walford 146

Rapid near infra-red estimation of multi-components in mixed juice and final molasses: the possibility of day-to-day control of raw factories using NIR ........................................ KJ Schöffler and MTD de Gaye 153

Pilot plant investigation of clear juice softening .............................................. SB Davis, SD Peacock and DC Walthew 161

Development of a mathematical model for watertube boiler heat transfer calculations .......... H Verbanck 166

Vibrating grate stokers for the sugar industry ..................................................... TA Giaier and TR Loviska 172

Steam conditioning for the sugar industry ....................................................... BJ Dooley and LAW King 176

Simulation of the Malelane and Komati mills with Sugars™ simulation software ............................................. N Stolz and W Weiss 184

Steps taken at Malelane refinery to improve refined sugar quality .......................... M Moodley and PM Schorn 189

Gasket failure on a clear juice plate heat exchanger at TSB, Malelane ........................................... I Singh, NJ Coetzee and E Bermeister 194

Chemical cleaning of evaporators ................................................................. DC Walthew, R Whitelaw and R Mohabir 199

Using pinch technology to optimise evaporator and vapour bleed configuration at the Malelane mill ........................................... I Singh, R Riley and D Seillier 207

A simplified model of a climbing film evaporator and its practical application ......... SD Peacock and M Starzak 217

Pilot plant investigations into a Balcke Dürr falling film plate evaporator at Gledhow sugar factory ................................................................ DC Walthew, B Morgenroth, N Hattwig, T Diringer, P Przybylak and C Friedrich 226

SASTA Gold Medalists ................................................................................. 234

Talbot-Crosbie and Kynoch/Triomf Prizewinners ........................................ 234

Annual Cecil Renaud SASTA Awards .......................................................... 235

Instructions to Authors .................................................................................. 236
