CONTENTS

Preface ................................................................. iii

I. PRIMARY SYSTEMS

Solid Cathode

Transition Metal Polysulfides as Battery Cathodes
W.L. Bowden, L.H. Barnette, D.L. DeMuth ............... 1

Copper Oxide Phases as Cathode Materials in Lithium
Batteries
W.L. Bowden, R. Dix, M.A. Rousseau ...................... 23

Performance Characteristics and Storage Capabilities
of Some Solid Cathode Lithium Battery Systems
J.P. Gabano, M. Broussely, Y. Jumel,
F. Potiron .......................................................... 41

Manganese Dioxide-Lithium Cells
H. Ikeda and N. Furukawa ................................. 53

A Simplified Preparation of High Purity Copper
Sulfides for Use in Lithium Cells
L. Chow, W. Harrison .......................................... 66

Liquid Cathode

Liquid Cathode Concepts
G.E. Blomgren ................................................... 78

Rapid Evaluation of Lithium Battery Cathode Catalysts
by Voltammetric Methods
G.T. Cheek .......................................................... 84

Improved Li/SO2 Reliability Using Complex
Impedance Analysis

Investigation of High-rate Lithium-Thionyl
Chloride Cells
C.A. Hayes, S.L. Guat, M.D. Farrington,
J.A. Lockwood .................................................. 107

Analysis of Gaseous Products Produced by the Reaction
of Lithium-Thionyl Chloride Cell Components
J.C. Bailey ......................................................... 121
Lithium-Anode Cells with Flowing Oxyhalide Electrolytes
K.A. Klinedinst..........................129

Mathematical Modeling Applied to the Optimization of
High Rate Lithium Cells
J. Boust, F. Richard, V. Danel, JP. Descroix.................139

Elastomeric Binders for Li-SOCl₂ Cell Carbon
Electrodes
B.J. Carter, B. Jeffries, S.P.S. Yen.....................145

Porous Cathodes for Lithium Primary Cells - II
T.B. Raddy, E.P. Thurston..........................160

Lithium Based Alloy-Thionyl Chloride Cells for
Application at Temperatures to 200°C
P. Kane, N. Marincic, J. Epstein, A. Lindsey............171

Progress in Long-term Testing of a Battery for an
Implantable Drug Delivery System
C.F. Holmes, P. Keister.............................185

Cathodic Passivation of Mo in 1.5 M LiAlCl₄/SOCl₂
F.M. Delnick, W.R. Cieslak, D.E. Peebles,
J.W. Rogers, Jr..................................198

Reactions of Evaporated Lithium Films on Oxide and
Glass Surfaces
B.L. Maschhoff, K.R. Zavadil, N.R. Armstrong........212

A LiAl/Cl₂ with a Four-Component Alkali-Metal
Chloride Electrolyte
D.L. Thomas, D.N. Bennion.........................224

II. RECHARGEABLE SYSTEMS

Organic Electrolyte

Recent Investigations of Lithium Electrodes Used in
Organic Solvent-Based Electrolyte Secondary Batteries
M. Garreau, S. Fouache Ayoub........................243

Lithium Intercalation Cells Without Metallic Lithium:
MoO₂/LiCoO₂ and WO₂/LiCoO₂
J.J. Auborn, Y.L. Barberio..........................256

Method to Determine Lithium Cycling Efficiency for
Lithium Secondary Cells
J. Yamaki, M. Arakawa, S. Tobishima, T. Hirai......266

vi
A Study of the Li/Li⁺ Couple in Ether Type Solvents Using Microelectrodes
J.D. Genders, D. Fletcher..........................280

A New Chelating Ether Solvent for Rechargeable Lithium Batteries
J.S. Foa, L.M. Rembeley,..........................291

Ether Co-solvents as Components in Sulfolane-Based Rechargeable Lithium Battery Electrolytes
L.A. Dominey, J.L. Goldman, V.R. Koch.........300

A Rechargeable Lithium Cell with Long Cycle Life, for Aerospace Applications
C.J. Johnson, P. Laman............................310

The Role of Conductive Polymers in Alkali-Metal Secondary Electrodes
T.R. Jow, L.W. Shacklette, M. Maxfield, D. Vernick..........................314

Conducting Polymer - Li Alloy Composite Electrodes
M. Maxfield, S. Gould, T.R. Jow, L.W. Shacklette..........................325

Analysis of Li/Li₁₋ₓV₃O₉ Secondary Batteries
G. Piastra, M. Pasquali............................337

A Solvated Electron Lithium Electrode for Secondary Batteries
A.F. Sammels, K.W. Semkow........................344

Compatibility of Electrodes and Electrolytes in Lithium Systems
R.A. Huggins..........................356

Measurement of Lithium Diffusion in Several Binary Lithium Alloys at Ambient Temperature
A. Anani, S. Crouch-Baker, R.A. Huggins........365

Investigation of the Mixed-Conducting Matrix Concept Employing a Ternary Lithium Alloy at Ambient Temperature
A. Anani, S. Crouch-Baker, R.A. Huggins........382

Electrochemical Studies of the Ternary Li-Si-S System
B.Y. Liaw, B.T. Ahn, R.A. Huggins...........393

The Electrochemical Properties of Several Li-Mo-O Ternary Phases
