PROCEEDINGS OF THE THIRD INTERNATIONAL CONFERENCE ON FLUID MECHANICS

Beijing, 1998

Beijing Institute of Technology Press
CONTENTS

Invited Lectures

Instability, Pattern Formation, and Turbulent Mixing of the Ocean Surface Layer

................................................................. Sidney Leibovich (3)

Study of Ship Waves in Victoria Harbour

................................................................. Allen T. Chwang (9)

An Brief Introduction to Aerodynamics Test Research at Cardc

................................................................. He Dexin (17)

Turbulent Diffusion and Lagrangian Statistics in Homogeneous Anisotropic Turbulence

................................................................. Yukio Kaneda (23)

On Derivations of Approximate Model Equations for Discrete and Continuum Systems

................................................................. Takuji Kawahara (29)

Fluid Dynamic Modelling of Industrial Problems

................................................................. W. Schneider (35)

Nonlinear Stability of Fluid Flows: From Kelvin to Arnold

................................................................. V.A. Vladimirov, K.I. Ilin (38)

Numerical Simulation and its Physical Interpretation for Some Complex Vortex Flows

................................................................. Zhuang Fenggan (54)

1. Flow Instability and Turbulence

Turbulent Mixing of Two Fluids Moving in Gravitational Field

................................................................. D.V. Neuvazhayev, N.S. Esikov, A.S. Kozlovsikkih, V.E. Neuvazhayev (63)

Studies of the Plane Strain on Inhomogeneous Turbulence

Xu Chunxiao, Zhang Zhaoshun, Cui Guixiang, L. Shao, H. Pascal, J.P. Bertoglio (68)

A New Dynamic Model for Large Eddy Simulation of Stratified Flows

................................................................. Liu Ningyu, Lu Xiyan, Zhuang Lixian (74)

Critical Assessment of Nonlinear Eddy-Viscosity Models in a Recirculating Square-Rib Flow

................................................................. S. Fu, Z. Zhai, M. Schatz, T. Rung, F. Thiele (80)

Research on Interaction Between Particles and Coherent Structure in Two-Phase Boundary Layer

................................................................. Lin Jianzhong, Ni Limin, Shen Liping (86)

Wavelet Transform to Identify Coherent Structures in Wall Turbulence

................................................................. Jiang Nan, Shu Wei, Wang Zhen-Dong (92)

An Explicit Algebraic Passive Scalar Flux Model with Diffusivity of Complex Number

................................................................. Lu Zhiming, Liu Yulu, Cai Shutang (98)

Study of Near-Wall Turbulence Dissipation

................................................................. Xu Chunxiao, Zhang Xiaohang, Zhang Zhaoshun, Cui Guixiang (104)
Local and Nonlocal Energy Transfer of Turbulence

.............................................................. Qian Jian (109)

New Development of Prof. Chou's Statistical Theory of Turbulence

.............................................................. Huang Yongnian (115)

The Response of Hill's Vortex in the Presence of a Small Three Dimensional Disturbance for Azimuthal Number as $m = 3, 4$

.............................................................. Tashpulat Rozi (123)

.............................................................. Markus Schatz, Thomas Rung, Frank Thiele (129)

Contribution to the Development of Nonlocal Reynolds Stress Closures

.............................................................. Günter Romberg (135)

A New Model of Reynolds Stress Transport Equation Sensitive to Inlet Condition of Turbulent Structure

.............................................................. Lu Panming (141)

The Numerical Simulation of the Stress-Induced Secondary Flow by Several Turbulent Models

.............................................................. Chen Wenxue, Li Wei, Xie Shengzong (149)

Numerical Simulation and Measurement of Turbulent Jet with Free Surface

.............................................................. Zhan Dexin, Wang Xianfu, Xiong Aokui (156)

Interpretation on Two Turbulent Models Applied in Water Engineering

.............................................................. Zhang Landing (162)

Non-Linear Stage in the Development of Perturbations at a Shocked Interface

.............................................................. Neuvazhayev Vladimir E., Parshukov Igor E. (166)

Absolute and Convective Instability of Compressible Axisymmetric Swirling Flow

.............................................................. Wei Mingjun, Sun Dejun, Yin Xieyuan, Wu Jiezhi (172)

Instability of Rectangular Duct Flow and its Transition to Turbulence

.............................................................. Takahiro Adachi, Jiro Mizushima (178)

Stability and Transition of the Natural Convection Boundary Layer Around a Vertical Heated Flat Plate

.............................................................. Tao Jianjun, Yan Dachun (184)

Numerical Instability of Vortex Ring with Swirl

.............................................................. Hu Guohui, Sun Dejun, Yin Xieyuan (190)

On Subharmonic Resonance in Supersonic Boundary Layer of Blunted Flat Plate

.............................................................. Kosinov A.D., Semionov N.V., Bessonov M.B. (195)

Development of Artificial Disturbances in the Boundary Layer on a Plate and in the Wake Behind it at Supersonic Free-Flow Speed

.............................................................. V.I. Lysenko, A.D. Kosinov, Yu. G. Yermolaev (201)

Weakly Nonlinear Investigation of Supersonic Boundary Layer Flow Instability

.............................................................. Maslennikova I.I., Gaponov S.A. (207)
Experimental Investigations of Linear and Nonlinear Development of Disturbances in Supersonic 3D Boundary Layer on Swept Wings at Controlled Conditions
Levchenko V. Ya, Kosinov A.D., Semionov N.V., Yermolaev Yu.G. (213)

Acoustic Wave Influence on Excitation of Disturbances and Amplification of Eigen Oscillations in Supersonic Boundary Layer
S.A. Gaponov, B.V. Smorodsky, V.Yu. Tyushin (219)

Experiments on Supersonic Leading Edge Receptivity to Acoustic Waves
N.V. Semionov, A.D. Kosinov, A.A. Maslov (225)

Experimental Investigation of the Receptivity of Separated Flow
Masahito Asai, Masakazu Kaneko (231)

The Flow Stability of Bingham Fluid in Pipe
Wu Wenxiang, Hou Jirui, Zhang Yunxiang (238)

Unstable Interface Between Oil and Water with Fast Relative Motion
R.M. Barron, C.F. An, Z. Zhang (247)

On the Instability of Stationary Spiral MHD Flows of an Ideal Incompressible Fluid
Yu. G. Gubarev (253)

2. Aerodynamics and Gas Dynamics

Aerodynamic Properties of Airfoil at Very Small Reynolds Number
Hossein Hamdani, Mao Sun (261)

On the Stability of Self-Similar Riemann Compression Waves Interference
V.A. Kukushkin, A.F. Sidorov (268)

Active Phase Control of a Separation-Reattachment Flow by Minute Manipulators
Satoshi Kikuchi, Yu Fukunishi (274)

Nonlinear Damping Characteristics of Short Blunt Vehicles
Li Qian, Fu Guangming, Zhao Lei, Wang Zijing (280)

The Euler Solution of a 3-D Wing with Aileron
Li Jin, Zhu Ziqiang, Zhen Zemin, Li Zhongze (286)

Topological Classification and Time Development of the Vortex Breakdown
Zhang Shuhai, Pang Yong, Zhang Hanxin, Zhu Guolin (293)

Identification of Three-Dimensional Jet-Vortex Structures by Numerical Simulation of the Laminar Non-Symmetric Flow Around a Body with a Forward Separated Zone and the Flow in Vicinity of the Plate With a Dimple
S. Isaev, A. Sudakov, A. Usachev, D. Frolov (299)

An Investigation of the Vortex Structure and Lift Characteristic for the Delta-Wing Pitching Vibration in the Subsonic Speed
Zhang Yongcun, Zhang Zugeng, Wang Zhichuan (304)

Nonlinear Evolution of Spatio-Temporal Structures in the Wake over a Cone at Large Incidence for Low Mach Number
Ran Zheng, Zhang Hanxin (311)
Numerical Simulation of a 76 Deg Sweep Delta-Wing Flowfield

Ge Lixin, Zhu Jianshi (316)

Unsteady N-S Calculations Using a Dual-Time Stepping Method for Airfoil Oscillating at High Angle of Attack

Song Wenping, Yang Yong, K. Pahlke, Qiao Zhide (322)

Numerical Simulation of Three Dimensional Separated Flow Around a Blunt Body

Tan Fasheng, Weng Peifeng, Xia Nan, Jiang Weiyuan, Dai Shiqiang (328)

The Inner-Expansion Analysis on an Inclined Circular Cone with Small Longitudinal Curvature

Sheam-Chyun Lin, Yung-Tai Chou, Yu-Shan Lou (334)

Heat Flux Characteristics on Three Dimensional Control Wings

Li Suxun, Chen Yongkang, Yan Zenkun (341)

Experimental Techniques of Reentry Body Dynamic Derivatives in Wind Tunnel

Gong Weibin (346)

Experimental and Computational Investigation on the Effects of Acoustic Excitation on Enhancing Lift

Hou Yaolong, Lu Qizheng, Wang Kaichun (352)

Shock-Tube Experimental Research on Effect of Surface Catalytic Activity on Stagnation Heat-Transfer

Liu Weixiong, He Wei, Zeng Lairong (360)

Experimental Investigation on the Aeroelastic Behavior of Haicang Suspension Bridge

Li Mingshui, Chen Xin, Zhang Dakang, Wang Weihua, Liao Haili (365)

An Experimental Study on Drag Reduction of Bluff Bodies

Wang Xikun, Cao Lujie, Wei Zhonglei (371)

Experiments on Interaction of a Vortex Filament with a Vortex Ring

Katsuhiro Suzuki, Yuji Abe, Masayuki Hirano, Osamu Sano (376)

Velocity Profiles in Confined Vortex Flows

G.H. Vatistas, S. Lin, L. Yan (381)

3. Hydrodynamics

Calculation of Oscillating Flows Past a Half Circular Cylinder on a Plane

Lu Xiyun (387)

Free Surface Flow Generated by the Orbital Motion of a Submerged Circular Cylinder in a Fluid of Finite Depth

B. Yan (393)

The Numerical Study of Bow Waves and Stern Waves of an Advancing Floating Body

Wan Decheng (399)

Numerical Model for Wave Transformation over a Rectangular Step

Liu Haiqing, Li Yanbao (405)

The Flow Structure and Forces on Vertical Circular Cylinder in Regular Waves

Huhe-Aodo, Tang Chi, Li Yuceng (411)
Mass Transport in the Thermocline in a Reservoir by a Wave Maker

Michihisa Tsutahara, Takeshi Kataoka, Masanori Tsuji, Satoshi Mashita (417)

Fourth-Order Evolution Equations and Stability Analysis for Weakly Nonlinear Water Waves Propagating over Uneven Bottoms

Huang Hu, Zhou Xireng, Lu Xiuhong (423)

Flutter Hydrodynamic Characteristics of Three-Dimensional Symmetric Hydrofoils

Pengfei Liu (429)

Study of Difference of Local Scour Depths at Bridge Piers under Both Steady and Unsteady Flows in Rivers with Fine Sand Beds

Dong Nianhu, Duan Wenzhong, Yang Ming (435)

2-D Turbid Water Flood Routing Numerical Simulation

Zheng Bangmin, Huang Dong, Ji Qingfeng (443)

4. Industrial and Environmental Fluid Mechanics

Numerical Computation of Rotor-Stator Interactions in a Transonic Compressor Stage by Solving Navier-Stokes Equations

Ren Yuxin, Toshinori Watanabe, Shojiro Kaji (451)

Validation of the Numerical Computational Method with Experiment and Analysis for the Viscous Flow in Centrifugal Compressor Impeller

N.X. Chen, W.G. Huang, X.D. Chen, J.J.J. Chen (457)

Numerical Study of the Secondary Flow Structures in Centrifugal Compressor Impeller

N.X. Chen, W.G. Huang (463)

Loss Reduction by Means of Three Dimensional Roughness Elements on the Suction Surface of a Linear Turbine Rotor Cascade

N. Sitaram, M. Govardhan, V.T. Murali Krishna (468)

Gas-Liquid Mass Transfer Using a Twin-Impeller System

Chen Z.D., Chen J.J.J. (474)

Multiphase Flow in Alloy Solidification

C.Y. Wang (479)

Numerical Simulation of Coriolis Effects on Bulk Flows in Horizontal Bridgman Growth on a Centrifuge

Ma Wenju, Khoo B.C., Xu Diao (485)

Modeling of Heat Transfer and Fluid Flow in Continuous Steel Casting Using a New Petov-Galerkin Finite Element Method

Y-H. Wu, B. Wiwatanapataphee, P.F. Siew (491)

Heat Transfer from a Discrete Heated Surface in a 2D Channel to a Zero-Mean Oscillatory Flow

Chen Z.D., Chen J.J.J. (497)

Effect of Interfacial Energy Variation on Surface-Tension-Driven Benard Convection

Kang Ping Chen (503)
Numerical Simulation of Three-Dimensional Cooling Water Flow in an Electron Linac

.................................................................Liu Haiwei, Chen Shannian (509)

Mechanisms of the Breakup of a Liquid Jet in a Gas Stream

.................................................................Ma Zheng, Zhou Zhewei (514)

Submerged Impinging Jets Within a Finite Water Depth

.................................................................Liu Peiqing (520)

Effect of Jet Pitch Angle of Vortex Generator Jets on Separation Control

.................................................................Hiroaki Hasegawa, Kazuo Matsuuchi (526)

Nine Differently Shaped Jets: The Centreline Statistics of Velocity

.................................................................J. Mi, G.J. Nathan (532)

The Spreading of a Drop, Flow of Viscous Layers and the Effect of Surface Treatment on the Flow on a Spinning Disk

.................................................................Xingfa Wang (537)

Friction Factor Calculating Formulas and its Field Application on Gas Pipeline in Sichuan Oil Field

.................................Mao Hongguang, Zheng Yonggang, Wang Minghao, Cao Ling (543)

Calculation of Guide Vane's Flow

.................................................................Shen Hongcui, Zhou Yi (549)

Design of Hydraulic Pipeline Transporting Spherical Capsules

.................................................................V.C. Agarwal, Rakech Mishra (555)

Drag Reduction with Certain Surface Additives in the District Heating Systems

.................................................................A. Krope, L. Črepinšek, J. Krope, D. Goričanec (559)

A Study on Energy Concentration and Self-Resonating Jet Nozzle and its Application in Drilling Engineering

.................................................................Sun Baojiang, Yan Dachun (565)

Optimal Pump Selection for Pipe Network Systems

.................................................................D. Goričanec, J. Krope, A. Krope, A. Pristovnik (571)

Large-Eddy Simulation of Turbulent Fluxes in Land-Atmosphere Interaction

.................................................................Xie Zheng Tong, Li Jia Chun (577)

Preliminary Study of a Cold Eddy in the Northern Beibu Bay

.................................................................Jiang Jingzhong, Liu Yonggang, Fang Tongde (583)

The Progress in the Study on the Interaction Between Coherent Structures and Sediment Movements in Open-Channel Flow

.................................................................Mao Ye (591)

Experiment Research on Wind-Blown Sand Two Phase Flow

.................................................................Zhu Jiujiang, Kuang Zhenbang (597)

The Constitutive Relationship of Visco-Debris Flow

.................................................................Lu Xiaobing, Li Deji (606)

The Effect of Dynamic Stress on Initiation of Debris Flow

.................................................................Lu Xiaobing, Li Deji (609)
A Laplace Transform Finite Element Method (LTFEM) for the Analysis of Contaminant Transport in Porous Media

................................................................. J.C. Wang, J.R. Booker (613)

Numerical Simulations of Axisymmetric Withdrawal in a Density-Stratified Fluid

................................................................. Takeshi Kataoka, Michihisa Tsutahara, Satoshi Mashita (619)

Study on Thermal-Hydraulic Problems in Hot Pool of CEFR

................................................................. Liao Zhijie, Ren Yuxing, Yao Zhaohui, Jiang Li, Shen Mengyu (625)

Influence of the Porosity Distribution of Raised Floor on the Airflow Uniformity in Cleanrooms

Numerical and Experimental Studies on Gas-Particle Flows in a Swirl Burner

................................................................. Li Rongxian, Luo Gang, Cui Longxuan, Zhou Lixing, Li Wenjian, Chen Jirong, Zhang Enzhong (637)

Numerical Predictions of Vertical Annular Two-Phase Flow Using a Two-Fluid Model

................................................................. S. Gao, D.C. Leslie (645)

................................................................. Zhou Lixing (651)

Pattern Formation on the Granular Layer Induced by Vertical Oscillation

................................................................. Osamu Sano, Katsuhiro Suzuki (657)

Formulation of Basic Equations of Droplet Flows with the Diameter Distribution

................................................................. Kazuhiro Tsuboi, Shigeo Kimura (663)

Constitutive Equations for Two-Phase Flows of Fluid-Solid Mixtures

................................................................. Yong Hong Wu, Ji-Wei Tian (669)

The Numerical Simulation of Moving Gas Bubbles in Liquid

................................................................. Lu Zuowei, Cui Guixiang, Zhang Zhaoshun (675)

Prediction of Holdup in Transport of Spherical Capsules in Pipeline

................................................................. Rakesh Mishra, V.C. Agarwal (681)

Design Velocity of Train of Heavy Density Spherical Capsules in Hydraulic Capsule Pipeline

................................................................. Rakesh Mathur, V.C. Agarwal, C.R. Rao (687)

Numerical Simulation of Suspension of a Cylindrical Particle on the Flat Bottom in Wall Shear Flow

................................................................. Wang Rong, Mao Zaisha (693)

Analysis Technique of Well Test with Multiphase Flow in a Finite Reservoir

................................................................. Zhai Yunfang, Yin Hongjun, Zhang Yan, Yang Xiuli (699)

Experimental Investigation on Gas/Liquid Two-Phase Flow in a Vertical Tube

................................................................. Wang Shuli, Wang Suhua (705)
Flow of a Power-Law Fluid Between Eccentric Rotating Cylinders

.................................................P.F. Siew, L.D. Hird, S. Wang (711)

The Axial Flow of Bingham Fluid Through an Eccentric Annulus

Yue Xiangan, Hao Jiangping, Xia Huifen, Lu Dongfeng, Yu Junbo, Ai Shangjun (717)

Constitutive Equation of Maxwell-Oldroyd Type for Liquid Crystalline Polymer and its Fluid Flow

.................................................Han Shifang (723)

Finite Element Simulation of Non-Newtonian Fluid Flow Past an In-Line Tube Bank

.................................................K. Ramesh, Y.T. Krishne Gowda (729)

New Model of Laminar Stratified Flow and Drag Reducing Law of Newtonian Fluids in Pipe

.................................................Zheng Yonggang, Xie Cuili, Du Jun (734)

A Study of the Mechanisms of Quaternary Oil Recovery

.................................................Tian Genlin, Wang Fang, Lei Qiaohui, Liu Weidong, Tong Zhengxin, Guo Shangping (740)

Study on the Rheological Properties of Amphoteric Polymer Fluids

.................................................Sun Yuxue, Long Anhou, Li Dan, Wu Di, Fu Liping (746)

Mechanism of Hydrodynamic Oil Film Failure by Collapse Due to Thermomechanical Instability

.................................................Zhang Guangjun, Li Guilan, Huang Ping, Wen Shizhu (752)

Numerical Simulation of Unsteady Flow Through Porous Media with Moving Boundary

.................................................Deng Ying’er, Liu Ciqun (759)

A Fully Coupled Model for a Fluid Flow in Deforming Saturated Porous Media

.................................................Dong Pingchuan, Xu Xiaohe, Pan Xuejun (766)

Non-Newtonian Fluids Flowing in Fractal Porous Media

.................................................Ge Jiali, Tong Dengke, Zhou Dehua (772)

A Study on the Characteristics of Low-Velocity Non-Darcy Percolation in Low-Permeability Reservoir

.................................................Jia Zhenqi, Wu Jingchun, Yuan Man, Zhang Jicheng (778)

A Displacemt Mechanisms Study of High Viscosity System in the Porous Media

.................................................Lei Qiaohui, Tian Genlin, Li Jiyong, Ju Yan, Sun Guangyu (784)

Vertical Fractured Well in Low Permeability Reservoirs

.................................................Li Fanhua, Han Dahuang, Liu Ciqun (790)

Determining Interlayer Stability with Vertical Interference Test

.................................................Zhang Jifen, Wei Xiufen, Gang Zhenbao, He Fengyun (795)

A Solution for Spatial Steady Flow of Ground-Water Within Layered Media

.................................................Wu Shiyu (801)
6. Others

Unsteady Inverse Problem of Type $I_B$ for 2-D Transonic Airfoil Flow: A Variational Formulation

Liu Gaolian (809)

The New Method of Computational Multi-Species Diffusion Equations in the Specified Temperature Field

Ren Anlu, Peng Jie, Dai Zhiqian (815)

Applications of Space-Time Conservation Schemes to Conservation Laws with Stiff Source Terms

Zhang Zengchan, Shen Mengyu (821)

Lattice-Boltzmann Models for Compressible Flows

Sun Chenghai (827)

TG FEM Simulation of Unsteady Flow Between Two Rotating Concentric Cylinders

Liu Youjun, Wu Gang (833)

A Non-Iterative Numerical Approach for Viscous Flow

Liao Shijun (839)

The Numerical Optimization Computation of Fluid/Electromagnetic Fields

Zhu Ziqiang, Zubair Islam, Zhu Yikun, Xue Xiaochun (845)

Fractal Dimension of Vortical/Non-Vortical in a Wake Flow

Cao Lujie, Wang Xikun, Tang Songyue, Wei Zhonglei (852)

Scalings and Hierarchical Structures in the Lorenz Model

Zhao Jianfu (858)

Properties of Special Integrals for the Wakes with Pressure Gradients

Hoang Thi Bich Ngoc, Vu Duy Quang (863)

Solution of Some Applied Hydrodynamical Problems by Methods of Queueing Theory

Tsitsiashvili G.Sh. (869)

A Double-Porosity Model for the Biofluid Flow in the Liver and the Relationship Between the Hepatic Venous Pressure and Lymph Flow

Liu Qingjie, Guo Shangping, Liang Naigang (873)

Interaction Theory for Lymph Formation

Guo Zhongsan (880)

* Numerical Investigation of the Behaviour of Multi-Spherical Particles in Fluid

X. Guo, M. Ehmann, A. Delgado (886)

* Flow Structure of Vortex Breakdown on a Delta Wing

Su Wenhan, Jia Xuetao, Yang Xiaofeng (892)

Author Index (898)

* These papers were received later.
