Challenges for the 21st Century

Edited by
On behalf of the Norwegian Tunnelling Society - NFF

VOLUME 1
Investigations, planning and design / Underground space use / Support and lining of tunnels
Table of contents

Preface IX
Organization X

1 Investigations, planning and design
Field observation of the Baixa-Chiado Station, Lisbon Metro
J.Barreto, D.Fernandes, L.R.Sousa & A.S.Cardoso 3
Austrian research initiative on Numerical Simulation in Tunnelling
G.Beer & J.Plank 13
A simplified method for gallery calculation in porous and low permeable media
I.Benamar, Ph.Cosenza, M.Wone & M.Ghoreychi 23
An advanced underground imaging radar
K.P.Bezrodniy, V.B.Boltintsev, V.M.Efanov, V.N.Iljakhin & M.G.Tolstohrov 31
Rock joint and rock mass characterization at Sellafield
R.Bhasin, N.Barton, A.Makurat, N.Davies & A.Hooper 35
The reinforcing effect of vertical nailing above shallow tunnels
T.Domon, K.Nishimura & K.Mitani 43
Directional core drilling used to explore rock conditions for a water supply tunnel
R.Dowdell, J.Kaplin & V.Tokle 51
Water inflow into tunnels
M.El Tani 61
Input formulation to numerical modelling in rock engineering: An attempt to prepare
a streamlined procedure
E.Grov 71
A study of the stress relieving slot effect on the shaft and tunnel stability in highly stressed
rock masses
A.A.Kozyrev, V.A.Maltsev & S.N.Savchenko 79
Geological investigation for Ringeriksbanen
F.Løset & I.Rui 87
A study on the progress of expressway tunnel portal design in Japan
K. Mitani, Y. Tamura, K. Nakagawa, W. Akagi & M. Nakazono

Numerical modeling of leg subsidence in tunneling
Y. Mitarashi, M. Hirano, T. Matsuo, T. Asai, K. Nakagawa & H. Terato

A new proposal of rock mass classification for tunnel faces based on analyses of observation records

State-of-the-art 3-D tomographic techniques for geotechnical evaluations of site and alignment conditions during tunneling

Settlement risk management with GIS for the Amsterdam North/South Metroline
H. Netzel & F. J. Kaalberg

Quality control of a sub-sea tunnel project in complex ground conditions
B. Nilsen, A. Palmström & H. Stille

Analysis of groundwater behavior around the crossings of adjacent tunnels
Y. Ohnishi, H. Ohtsu, Y. Yukimoto, Y. Fujii, T. Yasuda & K. Takahashi

Numerical study of low depth tunnel behaviour
P. P. Oreste, D. Peila & A. Poma

The Madrid Model: A semi-empirical method for subsidence estimating
C. Oteo, M. Arnaiz, J. Trabada & M. Melis

A simplified finite element approach to modelling swelling effects in tunnels
A. Sai'tta, A. Robert & H. Le Bissonnais

Risk management in the Amsterdam North/South Metroline: A matter of process-communication instead of calculation
A. J. M. Snel & D. R. Svan Hasselt

The evaluation of the segment internal forces in the construction process of shield tunnel
L. Yang, H. Zhu, W. Ding, T. Hashimoto & J. Nagaya

2 Underground space use

Operational approach to an underground work site: The Eole Project
A. Balan

Himdalen repository – Combined storage and disposal facility for low and intermediate radioactive waste
J. S. Baadstø

Construction of the Molineux Point LPG storage cavern
S. D. Cowdery

Underground options for the Gowanus Viaduct
L. C. F. Ingerslev

Influence of in-situ stresses on the stability of powerhouse caverns – Two case studies
W. Jin, E. Broch & M. Lu
3 Support and lining of tunnels

The Oslofjord subsea road tunnel. Crossing of a weakness zone under high water pressure by freezing
L. Backer & O.T. Blindheim

Design of deep Moscow Metro stations
E.S. Barski

Once more about the modern theory of underground structures design
N.S. Bulychev & N.N. Fotieva

Properties and advantages of advanced wet mix sprayed concrete systems
K.F. Garshol

The influence of rock stress and support on the depth of the disturbed zone in the Lærdal Tunnel: A key to differentiate the rock support
E. Grimstad & J. Kvåle

Lining designs for Norwegian road tunnels
A. Grønhaug

Development of new shield segments – Cone connector segments
H. Hashimoto, K. Honda, T. Oonaga, S. Akitaya, T. Mori, N. Hayashi, M. Yamamoto

Influence of packing materials on tunnel lining behaviour
E.J. van der Horst, C.B.M. Blom, P.S. Jovanovic & C. van der Veen
Doorframe tunnel method

M. Hueb

Large foundation underpinning built inside a tunnel, under a sensitive building in Brasilia, Brazil

M. Hueb

Development of bolt-less, automated erection ductile cast iron segments

A. Koizumi, T. Matsuda, M. Yasaka, H. Sato & T. Aoki

Excavation of an underground railway station in the central part of Oslo

V. Kveldsvik

Clogging phenomena and water carrying capacity of a tunnel drainage system

High strength shotcrete support for high ground pressure

H. Mashimo, M. Goto & H. Matsukawa

Development of a new lining for shield tunnels bearing internal pressures

H. Miyao, Y. Kamoshita, M. Kanai, K. Fukumoto, H. Watanabe, H. Minakami, M. Ozeki & H. Hashimoto

Measurements and evaluation of the effect of rock bolts under various geological conditions

T. Ohta & T. Kitagawa

Development of new working processes for repair of existing tunnels

O. Sakaida, T. Ochiai, Y. Tsuburaya & E. Tanaka

Variability in the construction of the soft rock Patra highway deviation tunnels

A. I. Sofianos, Ch. Giannaros, A. Kalkantzi & D. Katsaris

Excavation through semicircular-shaped shell formed by umbrella method at fault fracture zone beneath densely residential area

K. Shirakawa, T. Aoki, Y. Fujii & T. Nakao

Breaking through unconsolidated ground with thin overburden by Pre-Arch Shell Support (PASS) Method

S. Yamane, M. Maeda, N. Arai, K. Yamamoto & K. Kagawa

Author index
