Proceedings of

**Strong and Electroweak Matter ’98**

Copenhagen, Denmark 2 – 5 December 1998

**Editors**

**Jan Ambjørn**  
*The Niels Bohr Institute, University of Copenhagen, Denmark*

**Poul Henrik Damgaard**  
*The Niels Bohr Institute, University of Copenhagen, Denmark*

**Kimmo Kainulainen**  
*NORDITA, Denmark*

**Kari Rummukainen**  
*NORDITA, Denmark*
CONTENTS

Preface

Main talks

Hot baryon number violation and color conductivity
P. Arnold, D. Son and L. G. Yaffe

Effective theories for hot non-Abelian dynamics
D. Bödeker

The sphaleron rate: where we stand
G. D. Moore

Non-perturbative aspects of hot QCD
E. Iancu

Effective theories for real-time correlations in hot plasmas
P. Arnold and L. G. Yaffe

Electroweak baryogenesis in the MSSM
M. Quiros and M. Seco

Recent progress in electroweak baryogenesis
J. M. Cline

Hunting down the quark-gluon plasma in relativistic heavy-ion collisions
U. Heinz

Deconfinement and chiral symmetry restoration
F. Karsch

How to find the QCD critical point
K. Rajagopal

Phase diagram and Debye mass in thermally reduced QCD
Ph. Boucaud and C. P. Korthals Altes

Baryogenesis at the QCD scale
R. Brandenberger, I. Halperin and A. Zhitnitsky
Contributed talks

Non-equilibrium dynamics in non-Abelian gauge theories
J. Baacke, K. Heitmann and C. Pätzold

Dynamics of fermions and inhomogeneous Bose fields on a real-time lattice
G. Aarts and J. Smit

Periodic instantons in SU(2) Yang-Mills-Higgs theory
G. F. Bonini, S. Habib, E. Mottola, C. Rebbi, R. Singleton and P. G. Tinyakov

Nonperturbative contributions to the hot electroweak potential
S. J. Huber and M. G. Schmidt

Endpoint of the electroweak phase transition
F. Csikor, Z. Fodor, J. Heitger, Y. Aoki and A. Ukawa

The properties of the critical point in electroweak theory
M. Tsypin

Analytical studies for the critical line and critical endpoint of the electroweak phase transition
H. Meyer-Ortmanns and T. Reisz

Evidence for discrete chiral symmetry breaking in $N = 1$ supersymmetric Yang-Mills theory
R. Kirchner, I. Montvay, J. Westphalen, S. Luckmann and K. Spanderen

Vortex tension and the phases of 3D U(1)+Higgs
A. Rajantie

Catalysis of chiral symmetry breaking by external magnetic fields in three dimensional lattice QED
K. Farakos, G. Koutsoumbas, N. Mavromatos and A. Momen

Baryogenesis and extended electroweak models
I. Vilja
CP violation in the next to minimal supersymmetric standard model  
A. T. Davies, C. D. Froggatt and A. Usai  
227

Quantum Boltzmann equation for mixing scalar fields  
M. Joyce, K. Kainulainen and T. Prokopec  
232

Hard thermal loops in the electroweak theory  
C. Manuel  
238

Critical slowing down and defect formation  
M. Pietroni  
243

B-ball baryogenesis and D-term inflation  
J. McDonald  
248

Testing B-ball cosmology with the CMB  
K. Enqvist  
253

Calculation of the pre-exponential factor in bubble-nucleation rates  
N. Tetradis  
258

Nuclear parton distributions  
K. J. Eskola, V. J. Kolhinen, P. V. Ruuskanen and C. A. Salgado  
263

Gluon condensate and parton propagation in a quark-gluon plasma  
A. Schäfer and M. H. Thoma  
268

Screening masses of hot SU(2) gauge theory from the 3D adjoint Higgs model  
F. Karsch, M. Oevers and P. Petreczky  
273

Static mass scales in hot gauge theories  
O. Philipsen  
278

Measuring diquark condensation in lattice simulations of dense matter  
S. Hands and S. Morrison  
283

Electrical conduction in the early Universe  
H. Heiselberg  
288

Finite-temperature supersymmetry as a constrained supergravity  
C. Lucchesi  
294

Leptogenesis and inflation  
D. Delepine  
299
Electroweak baryogenesis with cosmic strings?
J. R. Espinosa

Gauge invariant resummation of thermal fluctuations
D. F. Litim

Electroweak origin of cosmological magnetic fields
O. Törnkvist

Magnetic fields and the EW phase transition
M. Laine

Gauge fixing and gluon propagator in $\lambda$-gauges
A. Cucchieri and T. Mendes

Nonequilibrium chiral perturbation theory
A. G. Nicola

Equation of motion of a classical scalar field with back reaction of produced particles
A. D. Dolgov and S. H. Hansen

Singlets and the electroweak phase transition
S. J. Huber

Resummation, classical theory and applications
A. Jakovác

 Bubble wall profiles in supersymmetric models
P. John

The heavy-quark potential in QCD at finite temperature
C. DeTar, O. Kaczmarek, F. Karsch and E. Laermann

Effect of strong magnetic field on the first-order electroweak phase transition
R. Fiore, A. Tiesi, L. Masperi, A. Mégevand

Two colours QCD at nonzero chemical potential
S. Morrison and S. Hands

Classical mean field description of colliding gauge fields and the “glue burst”
B. Müller and W. Pöschl
The phase diagram of 2 flavour QCD with improved actions
M. Oevers, F. Karsch, E. Laermann and P. Schmidt 374

Beyond HTL: the classical kinetic theory of Landau damping for self-interacting scalar fields in the broken phase
A. Patkós and Z. Szép 379

The QCD phase transition for two and three quark flavours
F. Karsch, E. Laermann, M. Lütgemeier and A. Peikert 384

Stabilization of chromomagnetic fields at high temperature
D. Persson 389

Dynamics of topological defects in electroweak theory
M. N. Chernodub, F. V. Gubarev, E.-M. Ilgenfritz and A. Schiller 394

Momentum dependent meson masses near the critical temperature with improved Wilson quarks
P. Schmidt and E. Laermann 400

$\mathcal{L}_{\pi^0\gamma\gamma}$ to $O(T^2)$
M. H. G. Tytgat 405

List of participants 410
