WORKSHOP ON PRODUCTION PLANNING AND CONTROL

Mons, Belgium 9-11 September 1996

Organized by FUCaM
Facultés Universitaires Catholiques de Mons
in collaboration with EIASM
European Institute for Advanced Studies in Management
with the support of ICM
Intercollegiate Center for Management Science

PROCEEDINGS
## TABLE OF CONTENTS

### PLENARY SESSION

Prof. M.C. PORTMANN, Ecole des Mines de Nancy
"Genetic Algorithms and Scheduling: a State of the Art and some Propositions"

### PROJECT SCHEDULING

NEUMANN K., SCHWINDT C.
Make-to-order production planning via resource-constrained project scheduling

SCHWINDT C., NEUMANN K.
An efficient heuristic for solving resource-constrained project scheduling problems arising from make-to-order production

SPRECHER A., DREXL A.
Truncated branch-and-bound methods for solving resource constrained project scheduling problems

### FLOW-SHOP

AMEN M.
Cost-oriented capacity balancing for assembly line production systems

BOTTA V., GUINET A.
Scheduling flowshops with precedence constraints and time lags

VAN DIJK N.
Simple performance bounds for production lines with finite capacities
JOB-SHOP

BAPTISTE Ph., LE PAPE C.
A constraint-based branch-and-bound algorithm for preemptive job-shop scheduling 24

DUVIVIER D., PREUX Ph., TALBI E.G.
Genetic algorithms applied to the job-shop scheduling problem 28

GEMBEH A., BANERJEE S.K., PANDYA K.
Short-term capacity control for a dynamic job shop 32

WORKLOAD CONTROL IN JOB SHOPS

WIENDAHL H.P.
Manufacturing monitoring and control; a model-based concept and its application in high variant shop enterprises 36

van OOIJEN H.
Improving the delivery performance by load based work-order release 47

MISSBAUER H.
Workload in Dynamic environments 51

HENDRY L.
Simulating the effect of workload control at the order entry level 55

CIGOLINI R., PERONA M., PORTIOLI A.
Workload control in job shops through order review and release strategies: research issues and perspectives 57

LAND M. and GAALMAN G.
Towards simple and robust workload norms 66

HIERARCHICAL PRODUCTION PLANNING

BARBAROSOGLU G., MINE TEZER
Hierarchical Planning in the supply chain 70

CHALMETA R., AGUILAR R., ROS L., LARIO F.C.
Object-oriented methodology applied to develop the support information system in the hierarchical planning decisions making 74

MYLLYLA J., KILPELAINEN T.
Hierarchical capacity planning model for discrete parts manufacturing processes 78

ÖZDAMAR L.
Capacitated family disaggregation in hierarchical production planning 86

REID S.P., BANERJEE S.K.
Information systems management in a hierarchical manufacturing environment 90

ARTIBA A., RIANE F., ELMAGHRABY S.
Sequencing on Hybrid two-Stages Flowshop to Minimize Makespan 93.1
PERFORMANCE ANALYSIS

DAMAND D., HEILI J., BARTH M.
Parameters and performance indicators in production management: formalizing the relations 94

EBRAHIM M.
Financial information for production decision making in hierarchical manufacturing environment 99

GRUN-REHOMME M.
Typology of the skills required in high performance organizational systems 121

HARRISON J.M., VAN MIEGHEM J.A.
Multi-resource investment strategies: operational hedging under demand uncertainty 124

BECEJSKI D., DAPIC M.
Objectives and programs ranking in quality management through the form of management game 128

MaCCARTHY B.L., WILSON J.R.
The human role and organizational issues in production planning and scheduling 132

PLENARY SESSION

Prof. W. BERTRAND, Eindhoven University of Technology
A research Program for the Design of Hierarchical Production Control xxv

PRODUCTION FLOW CONTROL

BRANDOLESE A., PERONA M., PORTIOLI A., SIANESI A.
Manufacturing management techniques for the new competitive scenario 137

BOUSSU F., HAPPIETTE M., RABENASOLO B.
Textile stock optimization by sales forecasting 149

CYCLIC SCHEDULING & LOT-SIZING MODELS

CHRETIENNE Ph.
List schedules for cyclic scheduling 153

POCHET Y., WOLSEY L.
Adding flexibility in lot-sizing models 157

REAL CASE APPLICATIONS

DAHEUR L., JACQUET-LAGREZE E.
A glass bottle production scheduling system using a mixed integer programming formulation 161
OR I., DUMAN E.
Optimization issues in automated production of printed circuit boards: operations sequencing, feeder configuration and load balancing problems

VAN HUFFEL P., HODAIBI K., LECOCQ H., TIMMERMANS G.
Business process improvement with expert configurators. Settling method and application at Cokerill Mechanical Industries

RAMAT E., LENTE C., TACQUARD C., PROUST C.
The RAIH model: application on product realization process example

ALDADONDO M., DEPAILLE T.
CADPlan a scheduling software in front of industrial requirements

GRABOT B., BERARD C., NGUYEN Ph.
IO: a practical approach of co-operative scheduling

LOADING & SCHEDULING

FANDEL G., FRANCOIS P., GUBITZ K-M.
Lead-time scheduling and capacity balancing in PPC-systems: result of a market research

GHAZVINI F.J., DUPONT L.
Minimization Total Completion time on a single-batch processing machine

GRUNOW M., GÜNTER H.O., MÜLHÄUSSE R.
Optimisation of SMD-placement operations in high-volume PCB assembly

GÜNTER H.O., GRONALT M., ZELLER R.
Job sequencing and component setup on a surface mount placement machine

BASTIE C.
Planning, executing and monitoring in a dynamic environment

IVENS P., LAMBRECHT M., VANDAELLE N.
CLIPS: A capacity and lead time integrated procedure for scheduling

VANDAELLE N., LAMBRECHT M., IVENS P.
Lot sizing and lead time estimation in an integrated scheduling procedure

F.M.S.

BARBAROSOGLU G., HANDE SAVAS
The effect of work-load balancing on scheduling performance in an FMS environment

MANIER H., BAPTISTE P.
Control of a flexible manufacturing ring: an approach with low utilisation costs

MARTINEAU P., LABESSE J.L., CARMIER C., COTARD C., PROUST C.
A generic model for flexible manufacturing systems (FMS) modelling

PROJECT SCHEDULING

ARTIGUES C., ROUBELLAT F., BILLAUT J.C.
Characterization of a set of schedules in a resource-constrained multi-project scheduling problem with multiple modes
CARLIER J., NERON E.
A new branch and bound method for solving the resource constrained project scheduling problem 255

KANBAN

MERTINS K., ALBRECHT R., HORTMANN H., LEWANDROWSKI U.
Kanban control and discontinuous production 259

PERONA M.
The integrated Kanban system (IKS): a new tool for kanban production 263

DISTRIBUTED CONTROL

AKAICHI J.
Distributed automation system modelisation using a structural and a classification approach 273

ANCIAUX D., ROY D.
Reactive Production System: a new approach 277

PLENARY SESSION

CHEVALIER G., BARRIER J., RICHARD P., Institut du Verre, Versailles
Production Planning in the Glass Industry 282

SCHEDULING APPLICATIONS

VAN BREEDAM A., JANSSENS G.
Rule-based jobshop scheduling via decision tables 286

VAN LANDEGHEM H., DE BACKER K.
Optimizing performance of a mixed-model assembly line through Tagushi-based simulation experiments 291

VANMAELE H., MATTHIJS D., VAN LANDEGHEM H.
Developing constraint-based scheduling policies for a continuous casting line 295

HYBRID SHOPS

GUINET A.
Integrated and sequential approaches to schedule hybrid flowshops in make-to-stock environment 299

HENTOUS H, GUINET A
A constrained hybrid flowshop problem 303

BILLAUT JC, HOUNGBOSA H, VEILLAT D., T'KINDT V
An efficient algorithm to minimize the maximum tardiness in a 2-stage hybrid flowshop scheduling problem 307

BOURCERIE M, MARTEAU S
An hybrid flow-shop modelling by Z/pZ-coloured petri net 311

VIGNIER A., DARDILHAC D, DEZALAY D., PROUST C.
An optimal approach to solve a k-stage hybrid flowshop 315
DELLAERT N.P., de HAAS K., MELO M.T.
Production planning in a hybrid system: analysis of a case study integrating make-to-order with make-to-stock manufacturing 320

FACTORY LAYOUT AND CELL PLANNING

SALGO S., PANDYA K.
Spares Management Re-engineering with office equipment manufacturer 324

BRAGLIA M.
Manufacturing cell design with size constraints: a multiperturbation simulated annealing approach 328

BRAGLIA M., ZAVANELLA L.
Local search heuristics in facility layout problem 332

RESOURCE-CONSTRAINED PROJECT SCHEDULING

DEMEULEMEESTER E, DE REYCK B., HERROELEN W.
Optimal and suboptimal procedures for the discrete time/resource trade-off problem in project networks 336

DEMEULEMEESTER E., HERROELEN W., VAN DOMMELEN P.
An optimal recursive search procedure for the deterministic unconstrained max-npv project scheduling problem 340

DE REYCK B., HERROELEN W.
A branch-and-bound procedure for the resource-constrained project scheduling problem with generalized precedence relations 344

METAHEURISTICS FOR SCHEDULING

FORTEMPS Ph.
Introduction flexibilities in energy planning problem 348

EL MAQRINI H., TEGHEM J.
Scheduling general flexible job-shop with several constraints 352

EL MAQRINI H.
Production scheduling with metaheuristics in a chemical firm 356

TRANSPORT & STORAGE SYSTEMS

FLEURY G., GOURGAND M., LACOMME Ph.
Stochastic algorithms to solve problems in transport systems 360

DOLLA A., GAUCHER P.
Path trajectory control of an AGV with an omnidirectional vision system and three targets points theoretical approach 364

MARES M., BOURCERIE M.
Modelling sequencing problems with Fp-petri nets 369

ARTIFICIAL INTELLIGENCE

DASSISTI M., GORGOGLIONE M.
A fuzzy approach for cost estimation in the new product development 373
YASINOVSKY S.
Knowledge based control system for manufacturing lines 383

EMELYANOV V., YASINOVSKI S., SHTAUTMASTER T.
IDEF-RAO, Methods for industrial system functional structure analysis 387

LOT-SIZING

JEUNET J.
Evaluation of lot-sizing techniques: a robustness and costs effectiveness analysis 391

du MERLE O., GOFFIN J.L., TROUILLER C., VIAL J.P.
A Lagrangian relaxation of the capacitated multi-item lot sizing problem solved with an interior point cutting plane algorithm 412
