Cluster-II Workshop
Multiscale/Multipoint Plasma Measurements

22-24 September 1999
Imperial College, London

Organised by:

European Space Agency
and
Imperial College, London
Contents

Foreword ix
A. Balogh and C.P. Escoubet

Session 1: Opening session
Chairman: C. Philippe Escoubet

Cluster-II Project Status 1
J. Ellwood (ESA/ESTEC, The Netherlands)

Les Wooliscroft: his Work on Space Plasmas 3
H. Alleyne (Sheffield University, U.K.)

Session 2: Multi-point observations
Chairman: Goetz Paschmann

ISEE Lessons for Cluster 11
C.T. Russell (IGPP/UCLA, USA)

ISSI Small Scale Plasma Structures Team: Results and Lessons 25
S. Schwartz (QMW, U.K.) and G. Paschmann (MPE, Germany)

Variability and Structures in the Solar Wind – Magnetosheath – Magnetopause 29
by Multiscale Multipoint Observations
L. Zelenyi et al. (IKI, Russia)

The Cusp as seen from Interball 39
I. Sandahl et al. (IRF-Kiruna, Sweden)

Polar Eyes the Cusp 47
C.T. Russell (IGPP/UCLA, USA)

IMF Driving of Dayside Convection and the Cusp 57
N.C. Maynard (MRC, USA), W.J. Burke (Hanscom Air Force Base, USA)

Multipoint Measurements in the Magnetosphere: ISTP Results 63
and Challenges for Cluster-II
T.I. Pulkkinen and H.E.J. Koskinen (FMI, Finland)
On the Possibility of Identifying and Using Magnetospheric Particles that travel between the Cluster Spacecraft

*E.C. Whipple (Washington U., USA)*

Upgraded Ground-Based Facilities for Coordinated Observations with Cluster: Opportunities for Magnetospheric Research, Revisited

*H. Opgenoorth & P. Eglitis (IRF-Uppsala, Sweden) and M. Lockwood (RAL, U.K.)*

**Session 3: Modelling and data analysis tools**

Chairman: Alain Roux

Cluster II Analysis of Turbulence using Correlation Functions

*T.S. Horbury (QMW, U.K.)*

ISSI Book on Analysis Methods for Multi-Spacecraft Data

*G. Paschmann (MPE, Germany) and S.J. Schwartz (QMW, London)*

Minimum Variance and DeHoffmann-Teller Techniques

*N. Sckopke (MPE, Germany) et al.*

Dual-Spacecraft Verification of Magnetopause Orientation and Motion: Preliminary Results

*M.W. Dunlop et al. (Imperial College, U.K.)*

Time-Domain Identification of Nonlinear Processes in Space Plasma

*D. Coca et al. (Sheffield U., U.K.)*

Theory of Multi-Point Data Analysis

*P. Song (Michigan U., USA) and C.T. Russell (IGPP/UCLA, USA)*

**Session 4: Cluster-II specific talks**

Chairman: Christopher T. Russell and Lev Zelenyi

Optimisation of Spacecraft Potential Control for Multi-Point Plasma Measurements

*K. Torkar (IWF, Austria) et al.*

Time of Flight Dispersed Ion Structures into the Auroral Bulge

*J.-A. Sauvaud (CESR, France) et al.*

EDI Multipoint Analysis

*G. Paschmann (MPE, Germany)*
The Cluster Magnetic Field Investigation: FGM-Specific Multipoint Analysis .......... 147
Andre Balogh & M.W. Dunlop (Imperial College, U.K.)

Multi-point Science with the Cluster Plasma Electron Data .................................. 155
Andrew Fazakerley and S. Szita (MSSL, U.K.)

Cluster and Energetic Particles in Geospace - What can be Learned from Geotail? .... 163
B. Wilken et al. (MPAe, Germany)

The Digital Wave Processor - WEC Modes and Timing on Cluster ........................... 171
Hugo Alleyne et al. (Sheffield U., U.K.)

Alfvén Waves and Structures: What can we Learn with Multipoint Measurements ...... 177
on Cluster-II
K. Stasiewicz and G. Gustafsson (IRF-Uppsala, Sweden)

The Cluster STAFF Experiment Specific Multi-Point Analysis ............................... 183
N. Cornilleau-Wehrlin et al. (CETP, France)

Multi-Spacecraft Studies on Cluster: Perspectives from the Whisper Experiment .......... 191
P.M.E. Décréau et al. (LPCE, France)

VLBI Studies of Auroral Kilometric Radiation and Solar Type III Bursts .................. 197
using the Wideband Data Plasma Wave Instrument
R.L. Mutel, D.A. Gurnett and R.L. Huff (Iowa U., USA)

The Role of the Cusp as a Source for Magnetospheric Particles: a New Paradigm .......... 203
T.A. Fritz (Boston U., USA)

Global MHD Simulations for Cluster-II ............................................. 211
J. Berchem (IGPP/UCLA, USA)

Numerical Simulations for CLUSTER tested with Equator-S and Geotail .................... 219
J. Büchner (MPAe, Germany) et al.

Exchange and Preservation of Cluster Science Data ........................................... 227
C.C. Harvey (CESR) et al.

Session 5: Future of multi-point measurements
Chairman: Andre Balogh

SWARM: a Fleet of Microsatellites to Explore the Magnetosphere ........................... 233
S.J. Schwartz. (QMW, London) et al

Magnetospheric Constellation Missions .................................................. 235
J.F. Fennell (Aerospace Corp., USA) et al.
Future of Multipoint Observations and Space Weather ................................................. 243
H.E.J. Koskinen (FMI, Finland)

Methods of Small-Scale Multi-Satellite Measurements for Project Roy ....................... 249
L.M. Zelenyi (Academy of Sciences, Moscow) et al.

Poster Session
Chairman: Lev Zelenyi

Tetrahedron Geometric Factors and Accuracy of Current Density Determination .......... 259
P. Robert

Accuracy of Fields Gradient Estimations by Cluster: Explanation of its .................... 265
Dependency upon Elongation and Planarity of the Tetrahedron
G. Chanteur

Multipoint Measurements as a Test of the Conjecture of Avalanching ....................... 269
and SOC in the Dynamic Magnetosphere
S.C. Chapman, R.O. Dendy, G. Rowlands

PV – Wave™ Routines for Estimating Gradients of Fields and their Covariances .......... 277
G. Chanteur

An Investigation into Instrumental Nonlinear Effects ..................................................... 279
S. N. Walker, R. Huff, M. A. Balikhin

Coherence Lengths of the Low Frequency Turbulence ................................................... 283
at the Bow Shock and in the Magnetsheath
I. Bates, M. Balikhin, H.St.C.K. Alleyne, M. Dunlop, H. Lühr

Minimum Variance Free Identification of the Composition ......................................... 287
of Space Plasma Turbulence and Nonlinear Processes in it
M. Balikhin, I. Bates and M. Dunlop

Turbulent Structures in the Outer Cusp ........................................................................... 291
A. Pedersen, C.-G. Faelthammer, N. Maynard, F. Mozer, R. Pfaff, B. Popielawska,
C.T. Russell,

On the Coordinated use of MIRACLE and Satellite Observations ............................. 295
– a Case Study of a Space Weather Event
K. Kauristie, A. Viljanen, A. Pulkkinen, O. Amm, P. Janhunen, T.I. Pulkkinen,
R. Pirjola, R.J. Pellinen and M. Brittnacher

Space-Time Ambiguities in Observations of the Magnetospheric Cusp: .................... 299
the Need for Small-Scale Multi-Point Magnetospheric Measurements
J. Watermann and P. Stauning
Measurement of Wave-Particle Interactions in the Magnetosphere ........................................... 303
using the DWP Particle Correlator
A.M. Buckley, M.P. Gough, H. Alleyne, K. Yearby and I. Willis

Survey of ELF and VLF Experiments in the Magnetosphere ...................................................... 307
F. Darrouzet and J. Lemaire

Investigation of Mirror Mode Structures using Multiple Spacecraft Measurements .................. 311
M. Tátrallyay and G. Erdös

Remote Sensing of Plasma Boundaries by Finite Ion Gyroradius Effects: ............................... 315
Applications for the RAPID Instrument on Cluster
P.W. Daly and U. Mall

Observations of the Northern Polar Cusp with the Polar Spacecraft.......................................... 319
T.J. Stubbs, P.J. Cargill, M. Grande, B. Kellett, M. Lockwood, C. Perry

Project Variant: Current and Field Measurements on Board SICH-1M Satellite ......................... 323
H. Alleyne and V. Korepanov

Combining Multi-Point Spacecraft and Two-Dimensional Ground-Based ............................. 327
Observations: Theory and Example of an IMF B\textsubscript{y}-related Cusp Current System
O. Amm, K. Kauristie, T.I. Pulkkinen, M.J. Engebretson, R.A. Greenwald, H. Lühr and T. Moretto

HF-VLF Plasma Waves Excitation During Geomagnetic Storm in ............................................ 331
the Polar Cusp Region
H. Rothkaehl, J. Blecki, K. Stasiewicz, A. Eriksson

IACG Boundary Layer Campaign: Current Status and Cluster-II Perspectives ......................... 335

Initial Results from the Low Latitude Magnetometer Array in China (CHIMAG) .................. 339

Separation Strategy for Co-ordinated Measurements ................................................................. 343
T.I. Woodward, M.W. Dunlop and D.J. Southwood

Observations of Magnetosheath Structure Upstream of the Magnetopause .......................... 347
T.I. Woodward, M.W. Dunlop, A.N. Fazakerley and N. Schopke

Cluster Magnetic Field Analysis Techniques ............................................................................. 351
M.W. Dunlop and T.I. Woodward

The Use of Dual-Spacecraft Data for the Identification of Non-Planar Magnetic Structures 355
M.W. Dunlop and T.I. Woodward
