PROCEEDINGS
Volume 1

IMACS Symposium on
MATHEMATICAL MODELLING
February 2-4, 2000
Vienna University of Technology, Austria

I. Troch
F. Breitenecker
Editors

ARGESIM Report No.15
Contents

Invited Lectures

1 Retaining analog intuition in a digital world with Bond graphs.
   D. Karnopp (Davis, USA)
9 Modelling dynamical systems using manifest and latent variables.
   J. C. Willems (Groningen, NL)
19 The inverse simulation approach: a focused review of methods and applications.
   D. J. Murray-Smith (Glasgow, UK)
27 Applications of computer algebra simulation (CALS) in industry.
   S. Braun (München, D)
37 Modelling for fault detection and isolation versus modelling for control.
   P. M. Frank, E. Alcorta García, B. Köppen-Seliger (Duisburg, D)

Engineering Applications

Human-Machine Interfaces in Robotics
   Special Session organized by S. P. Tzafestas (Athens, GR)
47 Auditory displays in human-machine interfaces of mobile robots for non-speech communication with humans.
   G. Johannsen (Kassel, D)
51 State and perspectives of user interfaces in autonomous mobile robots.
   F. Matia, A. Jimenéz (Madrid, E)
55 Human-robot-cooperation using multi-agent-systems.
   T. Laengle, H. Woern (Karlsruhe, D)
59 Human-machine interaction in intelligent robotic systems: a unifying consideration with implementation examples.
   S. G. Tzafestas, E. S. Tzafestas (Athens, GR)

Virtual Reality and Simulation in Robotics
   Special Session organized by S. P. Tzafestas (Athens, GR)
67 Grasp planning for three-fingered dextrous hands in virtual reality.
   E. Tóth (Budapest, H)
71 Simulation methods for manufacturing systems development.
   G. Bolmsjö, L. Randell, L. Holst, U. Lorentzon (Lund, S)
75 Neurofuzzy hybrid position/force control of industrial robots: a simulation study for the milling task.
   S. G. Tzafestas, C. E. Syrseloudis, G. G. Rigatos (Athens, GR)

Contributed papers:
81 Modelling and simulation of unsteady heat transfer effects on trajectory optimization of aerospace vehicles.
   M. Dinkelmann (Ottobrunn, D), M. Wächter, G. Sachs (München, D)
87 Adaptation of the balanced realization to the coupling of reduced order models for the modelling of the thermal behavior of buildings.
   C. Ménézo, H. Bouia, J. J. Roux, J. Virgone (Villeurbanne, F)
91 Modeling the heating of a building space using Matlab-Simulink.
   M. M. Gouda, S. Danaher, Ch. Underwood (Newcastle, UK)
95 Modelling heat transfer between solid particles.
   Cs. Mihálykó, B. G. Lakatos, T. Blickle (Veszprém, H)
99 Modeling and simulation of a hydrostatic transmission with variable-displacement pump.
   A. Kugi, K. Schlacher (Linz, A), H. Aitzetmüller, G. Hirnrman (Steyr, A)
103 Modelling of pressure from discharges at active wells by soil venting facilities.
   M. Slodička, H. De Schepper (Gent, B)
111 A study of parametric models applied to in-service life prediction of dry vacuum pump.
   Arihiro Ishida, Satoshi Konishi, Toshiro Sato, Kiyohito Yamasawa (Nagamo, J)
115 Forecast of the slagging tendency of pulverized coal fired furnaces by simulation of mineral matter transformation in three-dimensional multi-phase flow field.
   O. Božić, R. Leithner, H. Müller (Braunschweig, D)
125 Finite element modelling of mooring lines.
   O. M. Aamo, T. I. Fossen (Trondheim, N)
131 Adapting block method to solve moist air flow model.
   M. Woloszyn, G. Rusaouén, J.-J. Roux (Villeurbanne, F), T. Dagusé (Moret-sur Loing, F)
135 The flow problem in heated tube-header-structures.
H. Walter, K. Ponweiser, W. Linzer (Wien, A)

145 Modeling of two phase flows in Modelica.
O. Bauer (Hamburg, D), H. Tummescheit (Lund, S)

153 Interfacial non-turbulent thickness in agitated systems.
W. Khan (Mayagüez, Puerto Rico)

157 Dynamical physical modeling of a supercharged internal combustion engine.
P. Skorjan, R. Korb, S. Jakubek (Wien, A), B. Lutz (Jenbach, A)

161 Modelling of the iron losses in laminated magnetic materials using a dynamic Preisach model.
L. Dupre, R. Van Keer, J. Melkebeek (Gent, B)

165 Numerical length scale problems in mixed Eulerian-Lagrangian modeling.
E. Helland, R. Ocelli, L. Tadrist (Marseille, F)

169 Lyapunov function for an induction generator—infinite bus power system with transmission losses.
J. L. Munda, Hayao Miyagi (Okinawa, J)

175 Modeling of the works water section of a power plant group.
M. Meusburger, K. Schlacher (Linz, A), A. Sillaber (Innsbruck, A)

179 A linear decoupled model of open-channels for the synthesis of a decentralized volume variation observer.
C. Seatzu, G. Usai (Cagliari, I)

183 Decentralized control of irrigation open-channels via eigenstructure assignment.
C. Seatzu (Cagliari, I)

189 A software environment for the simulation and the control law design of the Scirocco Plasma Wind Tunnel.
G. Ambrosino (Napoli, I), M. Mattei (Reggio Calabria, I)

Descriptor Systems

Differential-Algebraic Equations in Computational Engineering
Special Session organized by M. Günther and B. Simeon (Karlsruhe, D)

195 The system of pantograph and catenary: mathematical models and numerical techniques.
M. Herth, B. Simeon (Karlsruhe, D)

201 Natural coordinates and mechanical DAE.
C. Kraus, M. Winckler (Heidelberg, D)

205 Mathematical problems in circuit simulation.
C. Tischendorf, D. E. Schwarz (Berlin, D)

209 Nonlinear electrical networks as dynamical systems on differentiable manifolds.
W. Mathis (Magdeburg, D)

Modelling by Descriptor System Approach
Special Session organized by P. C. Müller (Wuppertal, D)

213 Substitute equations for index reduction and discontinuity handling.
G. Fábián, D. A. van Beek, J. E. Rooda (Eindhoven, NL)

219 Symbolically calculated higher index conditions for linear circuits.
C. Clauß, P. Schwarz, B. Straube, W. Vermeiren (Dresden, D)

223 A further index concept for linear PDAEs of hyperbolic tape.
Y. Wagner (Darmstadt, D)

227 Modeling of lumped mechatronic systems and calculus of variations.
K. Schlacher, W. Haas (Linz, A)

231 Descriptor systems: pros and cons of system modelling by differential-algebraic equations.
P. C. Müller (Wuppertal, D)

Contributed papers:

237 Semidiscretization may act like a deregularization.
M. Günther (Karlsruhe, D)

243 Modelling nondeterministic discrete-event behaviour by descriptor systems.
D. Franke (Hamburg, D)

Methods and Theoretical Aspects

Validation Techniques and Applications for Dynamic Models
Special Session organized by D. J. Murray-Smith (Glasgow, UK)

247 Verification of various pipeline models.
D. Matko (Ljubljana, SI), G. Geiger, W. Gregoritza (Gelsenkirchen, D)
251 The validation of computer models of a mechanical ventilator and the human respiratory system intended for use in adult intensive care.
C. M. Murphy, D. G. Tilley, A. W. Miles (Bath, UK), B. Brook, D. Breen, A. Wilson (Sheffield, UK)

255 Use of MATLAB non-linear identification tool to optimize parameter estimation in a dynamic response of two-stage pressure relief valve model.
S. P. Tomlinson (Dorchester, UK), A. Bozin (Cambridge, UK)

259 Reducing the parameter space of a nonlinear biological model by testing the model purposiveness.
M. Zec, N. Hvala, S. Strmcnik (Ljubljana, SI)

Model Reduction and Simplification
Special Session organized by P. C. Müller (Wuppertal, D)

263 Nonlinear model reduction—method and CAE-tool development.
M. Kordt, J. Ackermann (Wessling, D)

273 Polytopic linear modeling of a class of nonlinear systems: an automatic model generating method.
G. Z. Angelis, M. J. G. van de Molengraft, J. J. Kok (Eindhoven, NL), J. Verstraete (Veldhoven, NL)

277 Efficient numerical model reduction methods for discrete-time systems.
P. Benner (Bremen, D), E. S. Quintana-Ortí, G. Quintana-Ortí (Castellón, E)

281 Reduced order feedback design for high index singularly perturbed systems.
S. A. Mikhailov, P. C. Müller (Wuppertal, D)

Multiport Modelling of Physical Systems
Special Session organized by R. Pauli (München, D)

285 Minimal complexity approximating models of multiport systems.
P. Dewilde (Delft, NL)

289 An extension of scattering variables to spatial mechanisms.
B. M. J. Maschke, A. J. van der Schaft, C. Bidard (Enschede, NL)

293 On the block structure of J-inner functions.
B. Kirstein, K. Müller (Leipzig, D)

297 Differential geometric models for nonlinear manifolds and multiport models for linear physical systems.
R. Pauli (München, D)

303 Bond graphs and matroids.
A. Reibiger (Dresden, D), H. Loose (München, D)

309 Physically oriented modeling of heterogeneous systems.
P. Schwarz (Dresden, D)

Modeling of infinite-dimensional systems
Special Session organized by C. Maffezzoni (Milano, I)

319 Modelling and simulation of combined lumped and distributed systems by an object-oriented approach.
C. Maffezzoni, M. L. Aime (Milano, I)

325 Alternatives in the generation of time domain models of fluid lines using frequency domain techniques.
W. Book (Atlanta, USA), C. Watson (Fort Worth, USA)

335 A fast integration algorithm for three-way catalytic converters PDE models.
L. Glielmo, S. Santini (Napoli, I)

339 An object-oriented data model to capture lumped and distributed parameter models of physical systems.
J. Hackenberg, C. Krobb, W. Marquardt (Aachen, D)

343 Index problems in modeling and simulation of flexible mechanical systems.
C. Maffezzoni, P. Rocco (Milano, I)

347 Numerical simulation of tubular reactors: some properties of the orthogonal collocation.
L. Lefèvre (Valence, F), D. Dochain, A. Magnus (Louvain-la-Neuve, B)

Modelling of Uncertainties in Dynamical Systems
Special Session organized by F. L. Chernousko (Moscow, Russia)

351 Set-membership equalization.
C. Durieu (Cachan, F), E. Walter, S. Marcos, O. Macchi (Gif-sur-Yvette, F)

355 Reachability under set-membership uncertainty.
A. B. Kurzhanski (Moscow, Russia), P. Varaiya (Berkeley, USA)
Graded set-membership models.
J. P. Norton, P. F. Weston (Birmingham, UK)

Ellipsoidal state estimation of perturbed linear systems in the presence of observation errors.
A. N. Kinev, D. Ya. Rokityanskii, F. L. Chernousko (Moscow, Russia)

On modelling of controls and uncertain disturbances in dynamical systems.
F. L. Chernousko (Moscow, Russia)

Formal methods in process control

Special Session organized by U. Eppe (Aachen, D)

Formal specification of dataflow languages with graph grammars.
M. Münch (Aachen, D)

Specification of distributed function block systems using UML.
Ch. Diedrich (Barleben, D)

Modeling of software structures in process control systems—avoiding bugs by using graph grammars.
U. Enste, M. Kneissl (Aachen, D)

Synthesis of hierarchical process control systems based on sequential aggregation.
J. Raisch (Magdeburg, D), A. Igitin (Stuttgart, D)

Contributed papers:

3-D mathematical models for finite element calculations of dynamics and statics of machinery.
O. V. Repetski, H. Springer (Wien, A)

Modeling of linear systems and finite deterministic automata by means of Walsh functions.
U. Konigorski (Clausthal, D)

Computation of Christoffel symbols for modeling with PDEs on conformal grids.
M. Holzinger, H.-J. Dirschmid, F. Breitenecker (Wien, A)

On the identification of nonlinear systems by combining identified linear models.
D. J. Leith, W. E. Leithead (Glasgow, UK)

Turning vector partial differential equations into multidimensional transfer function models.
L. Trautmann, R. Rabenstein (Erlangen, D)

Two approaches for state space realization of NARMA models: bridging the gap.
Ü. Kotta (Tallinn, Estonia), N. Sadegh (Atlanta, USA)

Semantics of state-events in hybrid languages.
D. A. van Beek, J. E. Rooda (Eindhoven, NL)

From human-machine-interaction modeling to virtual agents controlling autonomous systems:
a phenomenological engineering-oriented approach.
D. Söffker (Wuppertal, D)

Modelling probability distributions from data and its influence on simulation.
W. Hörmann (Wien, A)

Discrete Systems

Contributed papers:

Hierarchical discrete-event models of continuous systems.
P. Philips, H. A. Preisig (Eindhoven, NL)

Using wavelets for the detection of discrete events in time series of hybrid systems.
S. Simon, S. Engell (Dortmund, D)

A formal expression of time for discrete-events dynamic systems.
Ch. Thierry, J.-M. Roussel, J.-J. Lesage (Cachan, F)

A discrete-event abstraction of continuous-variable systems with asynchronous inputs.
D. Förstner (Stuttgart, D), J. Lunze (Hamburg-Harburg, D)

Integrated modelling of railway traffic with Petri nets.
Penglin Zhu, E. Schnieder (Braunschweig, D)

Analysis and synthesis of hybrid systems using Petri net-state-models.
Ch. Müller, H. Rake (Aachen, D)

Unitary-rate hybrid Petri nets.
F. Balduzzi, A. Di Febraro (Torino, I), A. Giua, C. Seatzu (Cagliari, I)

Formulation and analysis of an analog static model for urban planning.
R. De Lotto, A. Ferrara (Pavia, I)

The flow of large crowds of pedestrians.
R. Hughes (Victoria, AUS)
Modelling of product recycling chains.
U. Kleineidam, A. J. D. Lambert, J. Banens, J. Kok, R. J. J. van Heijningen (Eindhoven, NL)

Model of a disturbed production system.
S. Hadji, J. Favrel (Villeurbanne, F)

Simulation model for optimization of resources allocation in queuing networks.
O. Zaikin, P. Kraszewski (Szczecin, PL), A. Dolgui (Troyes, F)

Designing stabilization policies in an uncertain environment.
R. Neck (Klagenfurt, A), S. Karbuz (Paris, F)

Modelling of organizational decision-making systems and decision processes.
L. Cserny (Dunaújváros, H)

The dynamic interaction between economy and ecology. Cooperation, stability and sustainability for a dynamic-game model of resource conflicts.
J. Scheffran (Darmstadt, D)
