Table of Contents

Preface V
Science Committee VII
Local Organizing Committee VII
Table of Contents IX

Keynotes XVII
Future Modeling Needs in the Casting Industry IXX
M. Blair, R. Monroe, Steel Founders' Society of America, Barrington, USA
Casting simulation – Hardware developments, software algorithms and modern developments XXV
M. Cross, University of Greenwich, London, United Kingdom
Recent Developments of an X-ray NDE Simulation Tool XXXVI
J. Gray, Iowa State University, USA
Casting simulation as an innovation in the motor vehicle development process XLIV
H.-G. Haldenwanger, A. Stich, AUDI AG, Ingolstadt, Germany
Numerical modelling in meteorology and climate research - an overview LII
E. Kaas, Danish Meteorological Institute, Copenhagen, Denmark
An Airframe Design Perspective on Casting Process Simulation LXV
E. G. Nichols, Northrop Grumman Commercial Aircraft Division, Dallas, USA
J. G. Conley, Northwestern University, Evanston, USA
Thermophysical properties for simulation modelling LXXIII
P. Quested, National Physical Laboratory, Teddington, United Kingdom
Towards Integrated Modelling for “Intelligent Castings” LXXXI
P. R. Sahm, P. N. Hansen, RWTH Aachen, Aachen, Germany
Discrete particle simulation of particle-fluid flows XCIV
Y. Tsuji, Osaka University, Osaka, Japan
Phase field modeling of grain boundaries formed by impingement during melt growth CII
J. A. Warren, National Institute of Standards and Technology, Gaithersburg, USA
R. Kobayashi, Hokkaido University, Sapporo 060, Japan
W. C. Carter, Massachusetts Institute of Technology, Cambridge, USA

Microporosity, Distortion, Deformation, Hot Tearing 1
A combined cellular automaton and diffusion model for the prediction of porosity formation during solidification 2
R. C. Atwood, P. D. Lee
Finite elements for a thermomechanical analysis of solidification processes 10
M. Bellet, C. Aliaga, O. Jaouen
Relation between mushy zone rheology and hot tearing phenomena in Al-Cu alloys 18
M. Braccini, C. M. Martin, M. Suéry, Y. Bréchet
A numerical study of the influence of geometry and casting conditions on the ingot deformation in DC casting of aluminium alloys
A. Burghardt, B. Commet, J.-M. Drezet, H. G. Fjaer

Stress-strain computations of the DC casting process of aluminium alloy: A sensitivity study on material properties
J.-M. Drezet, B. Commet, H. G. Fjaer, B. Magnin

Thermophysical properties for the stress analysis of a magnesium high-pressure die casting part
A. Kaschnitz

Study on solidification shrinkage behavior of ductile iron in green and dry sand molds for the benchmarking of solidification modeling
J. R. Li, W. Z. Li, B. C. Liu

Hot tearing and thermally induced deformation in the mushy zone
A. Mo, I. Farup

Steel-plate cast-iron hybrid casting process and its modeling for solidification and distortion
T. Okane, T. Umeda, J. Akimoto, D. Skurai, J. Yao

Modeling of porosity formation during the solidification of aluminium alloys using a mushy zone refinement method
Ch. Pequet, M. Rappaz

Coupled Thermal-fluids-stress Analysis of Castings
M. Samonds, Z. J. Zhong

Influence of microstructure on hot tearing of steel
W. Schützenhöfer, C. Bernhard, H. Hiebler, H. Presslinger

Modelling of the thermomechanical behaviour of an AA5083 alloy to above solidus temperatures
J. A. Spittle, M. E. Keeble, S.G.R. Brown

On modelling of volume related defect formation in cast irons
I. L. Svensson, A. Diószegi

A Criterion for Porosity Formation in Steel Castings
J. Wendt, R. Arola, M. Verho, J. Rintamäki, I. Rytiky

Evaluation of Shrinkage
D. Windelberg, S. Ramm

A method of as-cast crack prediction based upon numerical simulation of solidification
X-S. Zheng, J-Z. Jin

Novel Applications and Optimization

Optimisation strategies for efficient pressure die casting
K. Davey, L. D. Clark, S. Hinduja

The determination of the heat transfer coefficient in experiments involving unidirectional solidification
W. D. Griffiths, K. Narayan Prabhu, C. P. Hallam, R. Kayikci

</table>
Computational techniques for the analysis and design of open-boat directional solidification processes
N. Zabaras, R. Sampath

Mold Filling
Defect prediction by numerical modelling of the thixoforming process
Th. Imwinkelried

Mold filling and heat transfer simulation of die casting process
L. R. Jia, S. M. Xiong, B. C. Liu

Use of simulation tools in the practical development of a method for manufacture of cast iron camshafts
M. R. Jolly, H. S. H. Lo, M. Turan, J. Campbell

Development of practical quiescent running systems without foam filters for use in aluminium castings using computer modelling

Effect of viscosity and solidification on mold filling behaviour
S. Kashiwai, J. Zhu, I. Ohnaka

Numerical simulation of the semi solid process with the help of rheological data determined by process adapted capillary viscometers
O. Klaassen, P. R. Sahm

Development of an interactive simulation system for die cavity filling and its application to the operation of low pressure casting process
J.-H. Kuo, W.-S. Hwang

A study on the application of solidification and fluid flow simulation to die design in gravity die casting

Study of sand mould wall movement in a gravity casting process
Y. Ling, F. Mampaey, J. Degrieck, E. Wettinck

Novel numerical algorithm for semi-solid preocessing of complex castings
D. M. Lipinski, J. Steinbach, E. Hepp

The modelling of ceramic foam filters
H. S. H. Lo, J. Campbell

Marangoni convection in Fe-O alloy pool during solidification or remelting process
K. Nakajima, S. Mizoguchi, S. Yasuhiro, N. Imaishi

Numerical simulation of mold filling and solidification process for permanent mold casting
X. Sun, S. Su, J. Wang

Thixotropic property measurement and flow modelling in semi-solid metal alloy slurries

Experimental study on mold filling process of casting by data acquisition apparatus
Q. Y. Xu, G. Y. Zhang, F. J. Li, B. C. Liu
Using a dynamic domain decomposition algorithm to parallelize a mold filling calculation

Z. A. Xu

Reduction of surface turbulence during filling of sand castings using a vortext-flow runner

X. Yang, M. Jolly, J. Campbell

A new simulation method of mold filling by using regular and irregular-mixed elements

J. D. Zhu, I. Ohnaka

Microstructure Simulation

A model of columnar growth using a front-tracking technique

D. J. Browne, J. D. Hunt

Numerical modeling of the dynamics of the solid/liquid interface morphology during directional solidification of alloys

A. V. Catalina, S. Sen, D. M. Stefanescu, P. A. Curreri

A comparison of phase-field computations with experimental microgravity measurements for dendritic growth in pure materials

Modeling of solidification microstructures based on fully coupling of macro-transport phenomena with cellular automaton

Q. Du, D. Li, Y. Li

Multiplication rate and growth rate of equiaxed grains formed by forced convection

H. Esaka, T. Wakabayashi, K. Shinozuka, M. Tamura

From constrained to unconstrained growth during directional solidification of dendritic alloys

Ch.-A. Gandin

Multicomponent multiphase solidification of Ni-Base Superalloys: Phase-field simulations coupled to thermodynamic databases

U. Grafe, B. Böttger, J. Tiaden, S. G. Fries, I. Steinbach

Experimental study of secondary dendrite arm spacing vs cooling rate in squeeze casting of A 356 alloys

P. Krishna, K. T. Bilkey, R. D. Pehlke

A stochastic approach for simulation of solidification morphologies and segregation patterns in cast alloys

L. Nastac

Multi-phase-field modelling of monotectic, peritectic and eutectic solidification

B. Nestler, A. A. Wheeler

Determination of the grain morphology in equiaxed Al-Cu alloys

O. Nielsen, B. Appolaire, A. Mo, H. Combeau

Numerical simulation of the particle/interface problem using a phase-field model

Complete Microstructure Selection Map of Al-Si Alloy System

A. Roósz, I. Kuti
Texture prediction of hot-dipped galvanized coatings using the phase-field method
A. Sémoroz, M. Rappaz

Monotectic composite growth with fluid flow
C. Stöcker, L. Ratke

Solidification parameters for columnar-to-equiaxed transition in Al – 4.5 % Cu alloys
M. A. Taha, N. El-Mahallawy, R. Hammouda

Two novel algorithms for micro-modelling during solidification
T.-M. Wang, X.-S. Zheng, J-Z. Jin

Simulating grain structure formation with a rotated-grid cellular automaton algorithm
N. Warnken, J. Rezende, R. Schadt, I. Wagner, P. R. Sahm

The influence of processing condition fluctuations on defect formation during VAR of Nickel based superalloys
X. Xu, W. Zhang, P. D. Lee, M. McLean, R. M. Ward, M. H. Jacobs

Solidification modeling with grain tracking
B. J. Yang, D. M. Stefanescu

Microsegregation
Linked modeling of phase evolution and transformation during solidification and homogenization of ternary Al-alloys
Th. Hofmeister, K. Greven, A. Ludwig, P. R. Sahm

Modelling of multiphase solidification in ternary alloys
D. J. Jarvis, S. G. R. Brown, J. A. Spittle

Numerical and approximate models of microsegregation in ternary alloys
V. R. Voller

Macrosegregation
Average model for momentum, heat and mass transfers during solidification of binary mixture
P. Bousquet-Méloü, B. Goyeau, M. Quintard, F. Fichot, D. Gobin

Experimental and numerical study of convective pattern and segregation in upward solidification with a stabilising solutal density gradient
M. D. Dupouy, I. Vannier, D. Camel, S. Verrier, A. Brun, C. David-Granat, H. Combeau

Free surface model to predict the influence of shrinkage cavities on the solute redistribution in castings
G. Ehlen, A. Schweizer, A. Ludwig, P. R. Sahm

Numerical modeling of macrosegregation during solidification processes using multiple, adaptive finite element grids
Th. U. Kaempfer, M. Rappaz

A numerical model for the prediction of centerline segregation in continuously cast slabs
S.-Y. Lee, S.-I. Chung, C.- P. Hong

Modelling of surface macrosegregation in DC casting of multicomponent Al-alloys
M. Mhamdi, A. Mo, D. Mortensen, D. Lindholm

XIV
Thermal and solutal influences of fibers on crystal growth of matrix alloy in composites
H. Miyahara, M. Mizumoto, K. Ogi

An Experimental and Numerical Study of Horizontal Bridgman Growth of a Transparent Material
J. E. Simpson, S.V. Garimella, H. C. de Groh

The influence of metal-entry on macrosegregation profiles in the DC casting of aluminium alloys
B. C. H. Vennecker, L. Katgerman

Microgravity

Accurate thermophysical property data of high-temperature metallic melts
I. Egry, G. Lohöfer, L. Ratke

High precision measurement of thermophysical properties for liquid metals – Requirements for simulation of foundry processes
E. Hepp, S. Neves, I. Egry

Heat and Flow Modeling of Continuous Casting Processes

Heat transfer in a gravity casting die - Influence of process parameters
S. Broucaret, A. Michrafy, B. Ladevie, G. Dour

Towards a comprehensive model of the direct chill casting process
M. Cross, A. Williams, C. Bailey, G. A. Taylor, K. Pericleous, T. N. Croft

Mathematical modeling of fluid flow phenomena during tundish filling and subsequent initial casting operation in steel continuous casting process
C.-M. Fan, W.-S. Hwang

Heat transfer modeling of continuous steel slab casters using realistic spray patterns
R. A. Hardin, H. Shen, C. Beckermann

A theoretical and experimental study of vertical continuous casting of copper billet
A. Kotipelto, K. Härkki, M. Immonen

Recent progress in the modelling of horizontal continuous casting of steel
V. Noshadi, W. Schneider

Coupled 2-D fluid flow –thermal-structural numerical simulation of the direct-chill ingot casting process
C. Bagnoud, M. Plata

Clogging during continuous casting: A study of the nozzle-stopper region
G. Ranegger, U. Schaflinger

Validation of fluid flow and solidification simulation of a continuous thin-slab caster

Controls of meniscus motion and quality improvement of cast metals in continuous casting by imposing multi-electromagnetic fields
Z.-F. Zhang, T.J. Li, B. Wen., J-Z. Jin

Modeling on solidification process of horizontal continuous casting of round iron bar
Y. Zhang, J. Su
Modelling metal-entry in the DC casting process using flow-3D
J. Zuidema jr., L. Katgerman 789

Modeling of Welding Processes 797
Micro- macro simulation and experimental investigations of laser remelting Al-coatings on steel
H.-J. Diepers, R. Prieler, G. Laschet, C. Theiler, E. Schubert 798

A thermo-mechanical model of the epitaxial laser metal forming process
J.-M. Drezet, M. Gäumann, O. Greim, M. Gremaud 806

Modelling moving heat source and residual stresses in submerged arc welding
J. L. Hansen, J. Hattel, T. Lorentzen 814

Observation of liquid metal flow during TIG arc welding under micro-gravity
Y. Ogawa 822

A numerical and experimental investigation of heat and fluid flow in electric arc weld pools
V. Pavlyk, U. Dilthey 830

3D simulation of surface tension driven interdendritic convection and microsegregation during laser surface alloying
N. Pirch, E. W. Kreutz 838

Finite element method for hot cracking analysis under welding using temperature dependent interface element
M. Shibahara, H. Serizawa, H. Murakawa 844

The application of three dimensional finite volume methods to the modelling of welding phenomena
G. A. Taylor, M. Hughes, K. Pericleous 852

Cast Iron Structure 860
Active feeding of ductile iron castings
R. Aagaard, W. Schäfer, P. N. Hansen, N. W. Rasmussen 861

Measurement and simulation of thermal condition and mechanical properties in a complex shaped cylinder head cast in grey iron
A. Diószegi, M. Wessén 869

Modeling of squeeze casting of ductile iron coupled with in situ heat treatment for ADI products
A. Flesch, R. W. Kaiser, S. M. Yoo, P. R. Sahm 877

Modelling of the graphitization kinetics in nodular cast iron casting
E. Fras, W. Kapturkiewicz, H. F. Lopez, A. A. Bubelko 885
