CONTENTS

Numerical Calculation of Fluid-Forces in Different Types of Stirring-Apparatus With CFD

Christoph Reichel, Thomas Berger, and
Klaus Strohmeier ........................................................................................................ 1

Large Eddy Simulation of Single Offshore Riser Oscillating Normal Uniform Flow: Comparison Between Two Dimensional and Three Dimensional Results

Arne E. Holdø, Mustafa Tutar, and
Gover de With ............................................................................................................. 7

CFD Simulation of Liquid-Particle Flows in Mixing Vessels

V. Kassera, M. Kraume, and T. Berger ...................................................................... 17

Comparison of a Complete 3-D Model of a Gas Turbine Engine With Modal Measurement

K.-H. Becker, R. Engelke, R. Grahnert, J. Moreno-Barragan, and
E. Tressl .................................................................................................................... 21

Operating Deflection Shape Analysis of Large Agitators: A Powerful Tool to Increase Plant Reliability and Availability

Günter Ebi ................................................................................................................... 31

Parallel Computation for the Compressible Fluid Flow Simulation Using the Riemann Solver

A. Rouboa and J. M. L. M. Palma ............................................................................ 43

Numerical Simulations of Snow Drifting and Wind Simulations Applicable to Buildings and Structures

Borre Bang and Tore Wiik ..................................................................................... 49

Numerical Eigenfrequency Determination of Stirrers Considering Fluid-Structure-Interaction

Thomas Berger and Klaus Strohmeier .................................................................... 55

Finite-Element Simulation of Non-Linear, Time and Temperature Dependent Effects of Flange Gasket Materials

Robert Kauer and K. Strohmeier ............................................................................. 59

The Use of Algebraic Computer Systems to Find Analytical Solutions in Continuum Mechanics and Applications to Fluid-Structure Interaction Problems

Michael Fischer and Klaus Strohmeier ................................................................. 65

Coherent Structure of Drag Reducing Solution Flow in a Cylindrical Pipe

Mizue Munekata, Hideki Ohba, and Kazuyoshi Matsuzaki .................................... 73

High Pressure Generation Using Underwater Explosion of Spiral Detonating Cord

Shigeru Itoh, Shiro Nagano, Toru Hamada, Kenji Murata, and
Yukio Kato ............................................................................................................... 81

Numerical Simulation on the Flight of Metal Plate Accelerated by Over-Driven Detonation

Zhi-yue Liu, Shiro Kubota, Yuichi Nakamura, and
Shigeru Itoh ............................................................................................................. 87

Deformation of Steel Pipe Under Explosive Loading

S. Kubota, H. Shimada, K. Matsui, Ogata Y. Wada, M. Seto, A. Masui, Zhi-yue Liu, and
S. Itoh ..................................................................................................................... 93

Numerical Investigation of the Turbulent Structure in Periodic Pipe Flow

Hideo Udagawa and Tatsuo Sawada .................................................................... 99

Flashing Phenomena of Liquid Nitrogen in a Pressure Vessel Under Rapid Depressurizations

Toshiaki Watanabe, Yutaka Hanaoka, and Ikuo Tokura ........................................ 107

An Attempt of Active Flow Control in Rotating Disk System

Takehiko Segawa, Hiro Yoshida, Yoshihiro Kikushima, and
Yasukata Tsutsui .................................................................................................. 113
