## TABLE OF CONTENTS

### Invited Papers

Indoor air quality and health <i>Molhave L</i>	3
When and where are people exposed to pollutants <i>Jantunen M</i>	15
Building related factors and health <i>Sundell J</i>	23
Investigations of IEQ <i>Leyten J L, Boerstra A</i>	35
How do we know what people think of their building? <i>Raw G</i>	41
Sensory evaluation of emissions and IAQ <i>Clausen G</i>	53
<b>A1 Health effects of chemicals and particles</b>	
Formaldehyde exposure in homes is associated with increased levels of exhaled nitric oxide in healthy children <i>Franklin P, Dingle P, Stick S</i>	65
Eye- and skin symptoms in German office workers - subjective perception vs. objective medical screening <i>Brasche S, Bullinger M, Bronisch M, Petrovitch A, Bischof W</i>	71
The assessment of the indoor risk factors in the houses of the children with and without respiratory complaints <i>Popa M, Ionut C</i>	77
What causes sick building syndrome - sick workroom or sick dwelling? <i>Soon A</i>	83
Health complaints in a Berlin high-rise office building <i>Bargfrede A, Schleibinger H, Sohr D, Rüden H</i>	89
Pesticide use around a rural medical centre associated with health problems in patients and staff <i>Joffres M, Pennell M, Fox R</i>	95
Airway irritation of VOC mixtures based on the emissions of the finishing materials - PVC floorings and paints <i>Kasanen J, Villberg K, Saarela K, Pasanen P, Kalliokoski P, Pasanen A</i>	101
Can an easily recognised odour "mask" the perception of irritating substances in indoor air? -A case report <i>Andersson K, Fagerlund I, Dahm B</i>	107
Ranking of selected indoor chemical pollutants <i>Senitkova I</i>	109
Differential diagnosis of common symptoms of indoor occupants in nonindustrial buildings <i>Sabath H</i>	115
Computers and health in the workplace <i>Clements-Croome D J, Jukes J</i>	119

Ways of producing healthy ionized air for improvement of indoor air quality <i>Chorny K A</i>	125
<b>A2 Studies on building factors and health</b>	
Indoor carbon dioxide concentrations and SBS in office workers <i>Apte M G, Fisk W J, Daisey J M</i>	133
Plastic interior materials and respiratory health in young children <i>Jaakkola J, Verkasalo P K, Jaakkola N</i>	139
A study of indoor pollutant standard index (IPSI) and building symptom index (BSI) <i>Sekhar S C, Tham K W, Cheong K W, Wong N H</i>	145
Baseline information on 100 randomly selected office buildings in the United States (base): Gross building characteristics <i>Burton L, Baker B, Hanson D, Girman J, Womble S, McCarthy J</i>	151
Airborne particulate matter within 100 randomly selected office buildings in the United States (base) <i>Burton L, Girman J, Womble S</i>	157
Building symptom index (BSI) of office workers in large buildings in Korea <i>Park S E, Shin D C, Oh I S, Yang J Y, Lim Y W</i>	163
Indoor air factors affecting symptoms of office employees <i>Halonen R, Heikkinen J, Kujanpää L, Seuri M, Reiman M, Keskkikuru T, Kokotti H</i>	169
Fungi, indoor environmental factors and personal factors and the potential for stress in a South-African medical research council clinic in Kwazulu Natal Durban <i>Shadwell A, Schlebusch L, Gqaleni N</i>	175
Diagnostic of IAQ problems in the central office of Slovenia Telecom <i>Butala V, Muhic S, Molan M, Mandelc-Grom M</i>	181
May foliage plants and full spectrum fluorescent light affect health and discomfort complaints among pupils, as well as air quality in classrooms? An intervention study. <i>Fjeld T, Levy F, Sandvik L, Tellnes G</i>	187
Baseline measurements of indoor air quality comfort parameters in eight United States elementary and secondary schools <i>Braganza E, Fontana C, Harrison J</i>	193
Development of the data base system for investigations of indoor climate in buildings <i>Huikko R, Kärkkäinen J, Puhakka E</i>	199
Ultrafine particles as a tracer for indoor air pollution sources <i>Nelson P A, Fogarty R</i>	201
Eliminating IAQ complaints by eliminating ultrafine particles <i>Fogarty R</i>	207
Quality of travelling in passenger carriages of Slovak railways <i>Dubrovova I</i>	213
Preventive measures and intervention on carpet removal and ventilation improvement in eleven schools <i>Mathisen H M, Frydenlund F</i>	219

**A3 Health effects of microbes and allergens**

- Indoor environment and allergic parameters before and after renovation of moisture damaged constructions 227  
*Ekstrand-Tobin A, Lindgren S*
- Skin test and serum IgE reactions to moulds in relation to exposure in children 233  
*Taskinen T, Laitinen S, Meklin T, Husman T, Nevalainen A, Korppi M*
- Bioactive agents produced by indoor bacteria and fungi affecting the eukaryotic cell membrane 239  
*Peltola J, Andersson M, Mikkola R, Apetroaie C, Salkinoja-Salonen MS*
- Fungal  $\beta$ -1,3-glucan SSG from the fungus *sclerotinia sclerotiorum* adjuvates the allergic response to ovalbumin in mice 245  
*Hetland G, Ormstad H, Ohno N, Løvik M*
- Predictors of high endotoxin concentrations in German homes 251  
*Bischof W, Koch A, Gehring U, Fahlbusch B, Heinrich J, Wichmann H*
- Induced production of reactive oxygen species in human neuroblastoma cells exposed to the mycotoxin fumonisin b1 257  
*Stockmann H, Savolainen K M*
- Increased myeloperoxidase (MPO) in induced sputum in patients with a history of indoor air health problems 263  
*Mussalo-Rauhamaa H, Hakala K, Kiviranta K, Metso T, Haahtela T*
- Cytotoxicity and inflammatory responses induced by bacteria isolated from mouldy houses: comparison of human and mice cells 267  
*Huttunen K, Jussila J, Ruotsalainen M, Iivanainen E, Nevalainen A, Hirvonen M*
- Allergens in the home: A review 269  
*Short S*
- Skin prick test findings in students from moisture and mould damaged schools: a three-year follow-up study 275  
*Immonen J, Meklin T, Taskinen T, Nevalainen A, Korppi M*
- Effect of indoor chemical exposure on the development of allergies in newborns - Lars study 281  
*Herbarth O, Diez U, Fritz G, Rehwagen M, Kroeßner T, Borte M, Wetzig H, Lehmann I, Müller A, Metzner G, Richter M, Schulz R*
- Health effects of air cleaners on asthmatic children sensitized to pets 287  
*van der Heide S, de Monchy J G*
- Indoor airborne moulds and its relevance to paediatric respiratory health - a study of an informal settlement in Durban, South Africa 293  
*Danaviah S, Gqaleni N, Chuturgoon A A, Dutton M F, Lalloo U G, Jeena P M*
- Moisture in school kitchens and symptoms of the kitchen personnel 299  
*Lignell U, Husman T, Meklin T, Koivisto J, Vähteristö M, Vepsäläinen A, Kettunen A, Nevalainen A, Kalliokoski P*
- Allergens in indoor air: health effects in workers of a mechanized sorting office 305  
*Papale A, Draicchio F, Baccolo T P, Palmi S*
- Assessment of health risks by air-conditioning-systems in a printing office 307  
*Baur X, Papenfuss F, Rauf-Heimsoth M, van Kampen V, Küter B*

#### A4 Measurements of microbes and allergens

The release of fungal spores from water damaged building materials <i>Kildeso J, Würtz H, Nielsen K F, Wilkins C K, Gravesen S, Nielsen P A, Thrane U, Schneider T</i>	313
Indoor allergens and seasonal change in mite numbers in a Finnish office environment <i>Harju A, Pennanen S, Merikoski R, Liesivuori J</i>	319
A study on house-dust mites infestation in temporary prefabricated homes after a recent earthquake in Central Italy <i>Mansi A, Frusteri L, Maroli M, Salerno A, Marcelloni A M, Muzi G, Accattoli M P, Abbritti G</i>	325
Development of molecular methods for the detection of microbes in water damaged buildings <i>Rintala H, Nevalainen A, Suutari M</i>	331
Moisture damages in schools - symptoms and indoor air microbes <i>Meklin T, Husman T, Vepsäläinen A, Vahteristo M, Koivisto J, Halla-aho J, Hyvärinen A, Moschandreas D, Nevalainen A</i>	335
The measurement of indoor environmental parameters in a newly started and refurbished school <i>Elfman L, Schoeps K, Wessen B, Gambe A, Nybom R</i>	341
Quantitative relationship between airborne viable microorganisms and particulates in air-conditioned office environments in Singapore <i>Tham K W, Zuraimi M S, Sekhar S C, Cheong K W, Wong N H, Ullah A</i>	347
Relationship between humidity, temperature and biological pollution in domestic buildings in a Coruna (Spain) <i>Rodriguez E, Baaliña A, Molina M, Santaballa J A, Torres E, Infante C R</i>	353
A survey of aspergillus contamination in a hospital during renovation <i>Bex V, Mouilleseaux A, Causse R, Squinazi F</i>	359
Fusarium oxysporum species inside building materials of water-damaged houses in southern Finland <i>Koukila-Kähkölä P, Parikka P, Nikulin M, Hintikka E, Mussalo-Rauhamaa H, Haahtela T</i>	365
Relationship between indoor air microbial peak values and outdoor climatic conditions <i>Parat S, Perdrix A, Maître A</i>	371
Temporal variation of fungal concentrations in indoor air <i>Vahteristo M, Hyvärinen A, Meklin T, Nevalainen A, Moschandreas D</i>	373
Assessment of microbial damage of building material in laboratories which use different methods <i>Toivola M, Meklin T, Luoto K, Hyvärinen A, Nevalainen A</i>	375
Evaluation of a new personal sampler for enumerating airborne spores <i>Reponen T, Grinshpun S A, Aizenberg V A, Wang Z, Gorny R, Willeke K</i>	379
Suitability of an electron microscope in assessing quality of indoor air <i>Salmi T</i>	381
Moulds in fire engine water tanks - a hidden challenge for indoor air quality? <i>Ahlén C, Haugen E N, Johannessen L N</i>	387

**A5 Exposure to chemicals**

Source contributions of VOCs in residential indoor, workplace and residential outdoor environments and their relation to personal exposure samples (EXPOLIS-Helsinki) <i>Edwards R D, Koistinen K, Saarela K, Jantunen M</i>	395
Indoor air target values for volatile organic compounds - experiences from IAQ assessments in Germany <i>Oppl R</i>	401
Field investigation on concentration of volatile organohalogen compounds and risk assessment <i>Iwata T, Ozaki J, Takahashi M, Kimura K</i>	407
A database on formaldehyde concentrations in residences <i>Ikeda K, Park J S</i>	413
Comparison of different chemical groups related to sick building syndrome (SBS) <i>Villberg K, Saarela K, Lukkarinen T, Mussalo-Rauhamaa H</i>	419
Chemical pollution and particulates in indoor air in dwellings in Rio de Janeiro, Brazil <i>de Almeida S M, de Almeida Pinto Corrêa M, Brickus L, de Aquino Neto F R, Moreira J C</i>	425
Indoor air quality in Japanese residential buildings <i>Yoshino H, Osawa H, Kuwazawa Y, Bogaki K, Shoji K</i>	431
Volatile organic compounds (VOC) in indoor air in the Swedish housing stock <i>Bornehag C, Stridh G</i>	437
Peak and long term nitrogen dioxide concentrations in Perth homes <i>Farrar D, Dingle P, Franklin P</i>	443
Identifying, quantifying and controlling VOCs in an air-conditioned office building – a Singapore case study <i>Tham K W, Sekhar S C, Cheong K W, Wong N H, Lee H K, Amanullah M, Zuraimi M S</i>	449
Indoor air quality in primary schools <i>Nikolic M</i>	455
The emission of volatile organic compounds in a building under construction <i>Sato S, Hirokawa Y, Bougaki K, Ito H, Kimituki M</i>	459
Indoor air quality at four ice skating rinks in Hong Kong <i>Lam S, Lee S C</i>	465
Investigation of cabin air quality in commercial aircrafts <i>Lee S C, Lam S, Luk F</i>	471
Development of measurement device for aldehyde emission rates using a diffusive sampler <i>Akutsu T, Kumagai K, Uchiyama S, Tanabe S</i>	477
Control of the environment in operating theatres in different types of hospitals <i>Holcátová I, Benesová V, Hartlová D</i>	483
Nitrous oxide pollution: a geostatistical method to assess spatial distribution of anaesthetic gases and hospital staff exposure <i>Moscato U, Esposito T, Vanini G</i>	487
Accidental toxic releases and the indoor environment <i>Moschandreas D, Sierocki A</i>	493

**A6 Exposure to particles**

Sensory and other neurogenic effects of exposures to airborne office dust <i>Molhave L, Kjaergaard S K, Attermann J</i>	501
Does cellulose fibre insulation material contribute to boron exposure of room occupants? <i>Schneider T, Breum N O, Mortensen P</i>	507
Ultrafine particle formation from $\alpha$ -pinene/ozone reactions in a chamber setting <i>Rohr A C, Spengler J D</i>	513
Assessment of the effect of air filtration and ventilation on reduction of exposure to submicrometer particles indoors <i>Jamriska M, Morawska L, Ensor D</i>	519
Personal exposure to particles <i>Na G K, Dingle P, Cheong C D</i>	525
Correlation between indoor and outdoor concentrations of thoracic and respirable particulate matter <i>Marconi A, Ziemacki G, Cattani G, Stacchini G</i>	531
A comparison of indoor and outdoor contamination levels of office buildings in Singapore <i>Tham K W, Sekhar S C, Cheong K W, Wong N H</i>	537
Connection between ultra-fine aerosols indoors and outdoors in an office environment <i>Asmi A, Koponen I, Keronen P, Pirjola L, Kulmala M</i>	543
The impact of ultra fine particles from outdoor combustion sources on IAQ <i>Morawska L</i>	549
Baseline indoor air quality pollutant characterization in five United States schools <i>Fontana C, Stetzenbach L, Cruz P, Braganza E</i>	555
Risk from asbestos exposure in Italian schools <i>Camilucci L, Campopiano A, Casciardi S, De Simone P, Fanizza C, Fioravanti F, Paglietti F, Ramires D</i>	561
Exposure to asbestos fibres in Italian office building after asbestos encapsulation <i>Camilucci L, Campopiano A, Casciardi S, Fanizza C</i>	563
Air quality measurements in a model kitchen using gas and electric stoves <i>Flückiger B, Seifert M, Koller T, Monn C</i>	567
<b>A7 Methods to investigate building related health problems</b>	
Development of biomonitoring methods to detect mouldy house exposure <i>Roponen M, Seuri M, Nevalainen A, Hirvonen M</i>	575
Peak expiratory flow follow-up of workers employed in damp buildings <i>Seuri M, Lehtomäki K, Reiman M</i>	579
Development of mouse model to study inflammatory responses induced by moldy house microbes <i>Jussila J, Komulainen H, Huttunen K, Roponen M, Hälinen A, Hyvärinen A, Nevalainen A, Kosma V, Pelkonen J, Hirvonen M</i>	585
The mycometer-test: a new rapid method for detection of mould in buildings <i>Reeslev M, Miller M</i>	589
Location of emitting sources in buildings with IAQ problems <i>Wessén B, Schoeps K</i>	591

Weighted descriptor profiles as an alternative method to measure the sick building syndrome <i>Berglund B, Gidlöf Gunnarsson A, Nilsson M E</i>	597
Development of questionnaires for reducing indoor air chemical pollution <i>Horata H, Teranishi Y, Morikawa Y, Fukao H, Murakami S, Yoshino H, Tanabe S</i>	603
Sociological approach to diagnostics of risk building (SBS, IAQ) by means of a validated questionnaire <i>Engvall K, Sandstedt E</i>	609
Context effects in a sick building syndrome questionnaire <i>Rathouse K, Raw G</i>	615
Perceived concern about mould problem <i>Kettunen A, Husman T, Meklin T, Koivisto J, Pamilo S, Niemelä P, Nissinen A</i>	621
<b>A8 Productivity and cost effects</b>	
Productivity and environment <i>Clements-Croome D J, Baizhan L</i>	629
Productivity is affected by the air quality in offices <i>Wargocki P, Wyon D P, Fanger P O</i>	635
The effects on health and self-estimated productivity of two experimental interventions which reduced airborne dust levels in office premises <i>Wyon D P, Tham K W, Croxford B, Young A, Oreszczyn T</i>	641
Moisture and mold in dwellings - estimation of healthcare costs in Finland in 1996 <i>Nguyen L T, Pentikäinen T, Rissanen P, Vahteristo M, Husman T, Nevalainen A</i>	647
Negative impact of air pollution on productivity: previous Danish findings repeated in new Swedish test room <i>Lagercrantz L, Wistrand M, Willén U, Wargocki P, Witterseh T, Sundell J</i>	653
The effect of indoor climate on productivity <i>Hannula M, Niemelä R, Rautio S, Reijula K</i>	659
Cost effectiveness of some remedial measures to control summer time temperatures in an office building <i>Seppänen O A, Vuolle M</i>	665
Economic value of high quality indoor air climate <i>Hagström K, Kosonen R, Heinonen J, Laine T</i>	671
Economic design outdoor air rates in an all-air system <i>Jönsson A</i>	677
Economic operation of an all-air system <i>Jönsson A</i>	683
Economics, air cleaning and ETS in gaming facilities <i>Roberts K S</i>	689
Implications of indoor environmental quality on workplace health and productivity <i>Kumar S, Fisk W J</i>	693
Asset value and resilient building design <i>Benda G, Bartl F, Munn D, Turner S</i>	697
Mapping: a tool for linking winter morbidity, low incomes and energy efficiency <i>Rudge J</i>	703
