10th International Conference

COMPUTER TECHNOLOGY IN WELDING AND MANUFACTURING

6-7 JUNE 2000

Færgen Sjælland
Copenhagen, Denmark
CONTENTS

Conference Programme

Session 1 – Sensor Systems

Computer vision techniques for real time weld seam monitoring
J Zhao, J Smith, J Lucas and C Balfour, University of Liverpool, UK

Cost effective solutions to seam finding and tracking using laser vision systems
A Pryce, Meta Vision Systems Ltd., UK

Image processing and fuzzy control of weld pool in narrow gap welding
L H Sharif*, S Yamane*, K Eguchi*, T Kubota** and K Oshima*, Saitama University, ** Himeji Institute of Technology, Japan

Seam tracking and adaptive control based on vision technology used for high power laser welding
S E Nielsen, Force Institute, Denmark

A vision sensor-based laser welding system for bellows
S K Lee, W S Chang and S J Na, KAIST, Korea

Multisensor clusters for spot welding quality control
J Cullen, C Balfour and J Lucas, University of Liverpool, UK

Adaptive multitorch multipass SAW
R J Beattie* and H S Moon**, *Integrated Sensor Systems Ltd., UK
**Hyundai Heavy Industry Co Ltd., Korea

A sensor system for robotic laser welding calibration
J P Huissoon, University of Waterloo, Canada

A microwave method for measuring the alignment and dimensions of hollow welded constructions
P Eskelinen and H Eskelinen, Lappeenranta University of Technology, Finland
Session 2 - Software for manufacturing and modelling

A high speed measuring system for the analysis of welding waveforms
P Eskelinen, Lappeenranta University of Technology, Finland

On-line process control of laser welding with sophisticated information management system tools
M Bohrer*, A Braunsteiner* and T Grünberger**, * Incision Lasertec Vienna, ** Austrian Research Centers, Austria

A neural network model for MIG welding parameter prediction
C Balfour, J Lucas, S Maqbool, J Smith and L Mcilroy, University of Liverpool, UK

A true inline TIG slope unit
N I Hester and R J Beattie, Integrated Sensor Systems Ltd., UK

Statistical process design for robotic gas metal arc welding of sheet metal
R W Richardson, T T Allen, D P Tagliabue and G Maul, The Ohio State University, USA

Weld defects identification for gas metal arc welding by the self-organize feature map neural networks
L Di, S Yonglun, Y Feng, South China University of Technology, China

Computer integrated use of CAE and microwave mechanics simulation in welded stripline filter
H Eskelinen, Lappeenranta University of Technology, Finland

A software module for planning of robotized multi-pass welding
O Madsen*, C Bro**, M B Madsen and J Glad***, * Aalborg University, ** Odense Steel Shipyard, *** IWA ApS, Denmark

A powerful CNC adapted to the capabilities of electron beam technology
T Löwer, M Hofner, D v Dobeneck, pro-beam KgaA, Germany
Session 3 – Modelling and Simulation

A strategy for estimating the internal states of the welding process
*J H Hover*, University of Aalborg, Denmark

Spotism: Numerical simulation and calculation of welding areas of the resistance spot welding process
*U Dilthey and H-C Bohlmann*, V Sudnik, V Erofeev and R Kudinov**
ISF Aachen Welding Institute, Germany ** Tula

Numerical and experimental investigation of geometric parameters in projection welding
*L Kristensen, W Zhang and N Bay*, Technical University of Denmark, Denmark (To be presented by Q Song, Technical University of Denmark)

Modelling of capacitor discharge stud welding
*D Weiss, U Franz, A Mahrle and J Schmidt*, Otto-von-Guericke University, Germany

Optimization of the composition of a flux-cored wire for welding galvanized steel based on computer simulation of the welding process
*M Zinisrad*, **V Mazurovsky**, ***V Shumyakov*** and **A Zinigrad**
*The College of Judea and Samaria, Israel ** Chisumin Ltd., Israel
*** Ural State Technical University, Russia*

Recent advances in computer modelling of microstructure
*U Dilthey and V Pavlyk*, ISF Aachen Welding Institute, Germany

A neural network approach for modelling the contributor variables to the topology of ship plate distortion
*M Z Yuliadi*, **A Shahab** and ***G Bruce***, *P.T. PAL Indonesia,
** Sepuluh Nopember Institute of Technology (ITS) Indonesia,
*** University of Newcastle upon Tyne, UK

Owning the process – New simulation tools make this a reality
*J S Noruk*, Tower Automotive, USA

Interaction between virtual engineering and hypermedia applications in welded steel construction design
*R Suoranta and H Eskelinen*, Lappeenranta University of Technology, Finland
Session 4 – Management, Education and Training

Knowledge base application in database thesaurus for welding technology
H Takechi* and Y Takahashi**, *Anan National College of Technology,
** JWRI, Osaka University, Japan

Solution of practical welding tasks by adapted interfaces for different software and
welding advisory systems
A Scharff*, H Rudert*, C Köthe*, A Hantke**, and H Benedix*,
*SLV Mecklenburg – Vorpommen GmbH, ** SLV Halle GmbH, Germany

Parallel economic and technical development of welding procedure specification
parameters
A R Hunter, E Hämmerle, M A Moser, University of Auckland, New Zealand

A fabricators use of an intelligent welding procedure management system
M Bernasek*, A Brightmore** and C Foster***, * C-Spec, USA,
** TWI Ltd., UK, *** Southern Energy Inc., USA

The next generation software for welding specification management
T Pedersen, FORCE Institute, Denmark

Development of a multimedia training programme in basic metallurgy and welding
M Bourton*, D Howarth** and Ilse McFarlane*, *TWI Ltd.,
**Lloyds Register of Shipping, UK

JoinIT™ - An interactive on-line knowledge base
G E Hale and A D Brightmore, TWI Ltd., UK

Process and materials selection database for the design and manufacture of
components for lightweight vehicles
W Lucas and J Thompson* and W Waddell**, * TWI Ltd., ** Corus, UK
