CONTENTS

COLOR & APPEARANCE DIVISION

Precolored Plastics for Medical Applications: Meeting Federal and State Regulations
S. Parikh, Monsanto ................................................................. 2

Use of Reflectance Spectra to Predict Heat Buildup of Pigmented PVC Panels

Titanium Dioxide Particles for Protection of Plastics from Ultraviolet Radiation

Red Cerium Sulfide Pigments: New Cadmium-Free Inorganic Red Pigments for the
Plastics Industry
G. Velleret, Rhone-Poulenc ......................................................... 13

Cadmium, Lead, Mercury & Hexavalent Chromium Free Color for Fluorocomp
(PTFE Compound)
S. Parikh and P. McCullough, ICI Fluoropolymers .................................. 424

Variation of Shrinkage in Commodity Plastics Resulting from the Addition of Colorants
R. Broadhead and P. Koch, The Pennsylvania State University at Erie .......... 429

Observations of Differences Between CMC and CIE 1992 L*a*b* (CIE TC1-29) Color
Difference Equations
A.L. Liebeknecht, Eastman Chemical Company .................................... 433

“What’s Wrong With That Number”
B. Mulholland, Hoechst Celanese .................................................. 437

EXTRUSION DIVISION

Comparison of Mixing Elements in Single Screw Reactive Extrusion: Compatibilization of
Nylon 6 and Polypropylene Blends
S.S. Dagli, K.M. Kamdar and M. Xanthos, Polymer Processing Institute .......... 18

Modelling and Control of a Reactive Extrusion Process
T.O. Broadhead, W.I. Patterson and J.M. Dealy, McGill University ................ 23

A Backmix Drag-Flow Reactor
Y. Lu, J.A. Biesenberger and D.B. Todd, Polymer Processing Institute .......... 27

Non-Newtonian and Non-Isothermal Analysis of Flow During Polymerization of Methyl
Methacrylate in a Model Twin Screw Extruder
L.L. Chu and K. Min, University of Akron ........................................ 30

Acceleration of Chemical Reaction in Boiling Polymer Solutions
G.H. Hu, L.Q. Chen and J.T. Lindt, University of Pittsburgh ..................... 37

Performance Differences Observed Between Structures Containing Simulated Post-
Consumer Recycle Resin
M.S. Edmondson and S.E. Pirtle, Dow Plastics .................................... 42

A New Family of Linear Ethylene Polymers with Enhanced Sealing Performance Designed
for the Multilayer Barrier Food Packaging Films
D. Van der Sanden and R.W. Halle, Exxon Chemical .............................. 46

Blown Film Bubble Forming and Quenching Effects on Film Properties
T. Butler and R. Patel, Dow Plastics ............................................... 51

Flexomer Polyolefins, A Unique Class of Ethylene Copolymers for Low Temperature
Applications
D.C. Eagar, G.E. Ealer, S.A. Bartocci and D.M. Kung, Union Carbide .......... 58

* Presented in a joint session

* Presented in a joint session
*New Aspects in Process Data Processing on Extrusion Lines
W. Michaeli and L. Spix, Institut fur Kunststoffverarbeitung .......................................................... 1580
Dispersed Solids Melting Theory
C. Rauwendaal, Rauwendaal Extrusion Engineering, Inc. ....................................................................... 2232
Residence Time Distribution in Non-Intermeshing Counter-Rotating Twin-Screw Extruders
L. Chen, G.H. Hu and J.T. Lindt, University of Pittsburgh ...................................................................... 2238
Calculating the Temperature in the Flight Clearance
S. Dereinski, Eastman Kodak Company ...................................................................................................... 2243
Cooling in Single Screw Extruders
S.K. Dey, C. Jacob and D.B. Todd, Polymer Processing Institute .............................................................. 2248
Measuring On-Line Polymer Properties Using an Ultrasonic Technique
Transient Flow Calculation of Co-Rotating Twin Screw Extruders
Dr. A. Kiani, Werner & Pfleiderer Corp. ....................................................................................................... 2758
The Influence of Curvature on the Simulation of Flow in a Tangential Counter-Rotating Twin Screw Extruder
D.-S. Bang and J. White, The University of Akron ...................................................................................... 2763
A Numerical Model for Plasticating Screw Extruders with PVC
F. Thibault and P.A. Tanguy, Laval University ........................................................................................... 2767
Simulating the Flow and Heat Transfer Effects During Polymer Processing Using the Boundary Element Method
P. Gramann and T. Osswald, University of Wisconsin-Madison ................................................................. 2774
Extrusion of Viscoplastic Fluids Subject to Different Slip Coefficients at Screw and Barrel Surfaces
A. Lawal and D. Kalyon, Stevens Institute of Technology ........................................................................... 2782
On the Mixing Window in Chaotic Systems
F.H. Ling, Polymer Processing Institute ....................................................................................................... 2786
The Study on Melt Conveying and Mixing Characteristics of Staggered Non-Intermeshing Counter-Rotating Wave Twin-Screw Extruders
X. Geng and J. Li, Beijing Institute of Chemical Technology, China ...................................................... 2793
A Network Approach for the Design of Profile Dies
M. Huneault, P. Lafleur and P. Carreau, Ecole Polytechnique de Montreal ................................................. 3338
Compressible Viscous Flow in Slits and Tubes - A Slip Mechanism for Extrusion
G.C. Georgiou, The University of Cyprus ...................................................................................................... 3344
Velocity Measurement in Single and Multi-Layer Flow Using Laser Doppler Velocimetry
W. Michaeli and F. Poehler, IKV .................................................................................................................... 3347
Coextrusion Layer Rearrangement in Different Geometric Channels
J. Dooley, The Dow Chemical Company ..................................................................................................... 3354
Investigating Interface Instabilities in Coextrusion
J. Vlcek, Compuplast International Inc. ........................................................................................................ 3365
The Extrusion Performance of Co-Rotating, Intermeshing Twin Screw Extruder Screw Elements-An Experimental Investigation
T.W. McCullough, The Dow Chemical Company ....................................................................................... 3372
The Effects of Polymer Viscoelasticity on fiberglass attrition when Compounding fiberglass Strand on the Co-Rotating Intermeshing Twin Screw Extruder
J. Grillo, Werner & Pfleiderer Corp .............................................................................................................. 3380
Co-Rotating Fully Intermeshing Twin Screw Extruder Mixing Analysis
J.P. Christiano, Davis Standard .................................................................................................................... 3386

* Presented in a joint session

ANTEC '93/xi
Three Dimensional Analysis of Co-Rotating Twin Screw Extrusion Using Tools of Dynamics
A. Lawal and D. Kalyon, Stevens Institute of Technology .................................................. 3397
Simulation of Flow in a Modular Corotating Intermeshing Twin Screw Compounding
Extrusion System with Multiple Feeds and Vents
Z. Chen and J. White, The University of Akron ................................................................. 3401

INJECTION MOLDING DIVISION

Gas-Assisted Displacement of a Viscous Liquid in a Tube
A.J. Poslinski and V.K. Stokes, GE Corporate Research & Development ................................ 68
New Developments in CAE Technology for the Gas-Assisted Injection Molding Process
L.S. Tung, AC Technology ...................................................................................................... 74
Experimental Case Studies of Dimensional Repeatability on Gas Assisted Injection Molding
Process and Cavity Pressure Controlled Closed Loop Injection Molding for Structural Parts
E. Okeke, Xerox Corporation
L. Cosma, General Electric Company ................................................................................ 79
Numerical Simulations and Experimental Studies of the Co-Injection Molding Process
S.C. Chen, K.F. Hsu and K.S. Hsu, Chung Yuan University ................................................ 82
Comparison of Flat Thin-Shell Finite Elements for Structural Analysis of
Injection-Molded Parts
L. Kudryavtsev and K.K. Wang, Cornell University .......................................................... 88
An Integrated Design Program for Injection Molding Process
W.R. Jong, L. Himasekhar and H.H. Chiang, AC Technology
K.K. Wang, Cornell University .............................................................................................. 91
Control of Molding Defects by Melt Flow Front Prediction
G. Churchward, E. Kosior and S.N. Bhattacharya, Royal Melbourne Institute of Technology .... 98
Spiral-Flow Analysis Including Variable-Density Effects
C.A. Hieber, Cornell University
H.H. Chiang, Advanced CAE Technology, Inc. ................................................................... 102
Using Process Simulation to Optimize Tooling Cost and Performance of an
Injection Molded Printer Chassis
S.F. DeFoss, D.T. Tyler and H.R. Fister, Plastics Technology Center
C. Do, Transaction Technology Inc., Citicorp ....................................................................... 108
*Quality Improvement of Elastomeric Moldings by Evacuation of the Cavity or By
Scavenging the Cavity with an Inert Gas
W. Michaeli and R. Maass, Institute For Plastics Processing (IKI) ....................................... 116
*Quality Assurance in Injection Molding with Neural Networks
J. Haussler and J. Wortberg, University of Paderborn ...................................................... 123
*A Systematic Approach for Solving an Injection Molding Problem
G. Ari and J. Wilson, Bowles Fluidics Corporation
Q. Zou, Black and Decker Inc. ............................................................................................. 130
*In-Line Optical Monitoring of Polymer Injection Molding
A.J. Bur and F.W. Wang, National Institute of Standards and Technology
C.L. Thomas and J.L. Rose, Drexel University ..................................................................... 135
*Closed Loop Control of Injection Molding Hold Time
C.L. Thomas and A.A. Tseng, Drexel University
A.J. Bur, National Institute of Standards and Technology
J.L. Rose, The Pennsylvania State University ...................................................................... 143
Advantages of Using Multiple Gates on Injection Molded Products
B. Catoen, Husky Injection Molding Systems Ltd. ............................................................ 508
Weldline Strength in Glass Fiber Reinforced Polyamide 66
A. Meddad, A. Kerachni and B. Fisa, Ecole Polytechnique de Montreal .......................... 511
Weld Line Strength and the Prediction for an Injection Molded Polymer Blend
N. Mekhilef, A. Ait-Kadi and A. Ajji, Laval University ................................................... 516
Improving Weld Line Strengths Using a Multi-Live Feed Injection Molding Process
R. Malloy and G. Gardner, University of Massachusetts Lowell
E. Grossman, SCORTEC Incorporated ................................................................................ 521

*xii/ANTEC '93

* Presented in a joint session
Shear Controlled Molding of Long Fiber Reinforced Thermoplastic Composites
S. Parekh, S. Desai and J. Brizzolara, Polymer Processing Institute ............................................. 530

Procedures for Increasing the Weldline Strength of Injection Molded Parts
W. Michaeli and S. Galuschka, Institute fur Kunststoffverarbeitung ............................................. 534

Lamellar Injection Molding Process for Multiphase Polymer Systems
W.J. Schrenk, M.A. Barger, R.E. Ayres and R.K. Shastri, Dow Chemical Company ......................... 544

Gas and Solvent Barrier Blends by Lamellar Injection Molding
M.A. Barger, W.J. Schrenk, D.F. Pawlowski and C.N. Brown, Dow Chemical .................................. 550

High Speed Injection
J. Overbeeke, Husky Injection Molding Systems .................................................................................. 557

Preventing Cartridge Heater Failure in Hot Manifolds
F. Rodrigues, Bright Brothers Limited .................................................................................................. 563

Adaptive Control of Cavity Pressure During Filling
F. Gao, W.I. Patterson and M.R. Kamal, McGill University ................................................................. 565

Investigation of Material, Process, and Design Effects on Color and Appearance
of Injection Moulded Aircraft Parts
J.S. Griffing and K.M. Whitaker, The Boeing Company ...................................................................... 570

How to Achieve Repeatable Production of Quality Parts Details of the Plastics
World Productivity Challenge "What Did We Do And Why?" The Results!
J. Bozzelli and R. Groleau, RJG Associates ....................................................................................... 574

Process Monitoring in Plastics Processing A Number of Critical Observations
H. Potente, J. Wortberg, D. Hanning and J. Haubler, University of Paderborn ................................. 579

A Method of Improving the Quality of Molded Plastics By Ultrasound Vibration
A. Cui, M. Konno, N. Nishiwaki and S. Hori, Tokyo University ............................................................ 585

*The Use of Designed Experiments to Optimize the Strength of Reinforced PET
Moldings—A Case Study
M. Sepe, Dickten & Masch Mfg. Co. ..................................................................................................... 591

*Statistical Quality Control, Electronic Data Collection and Injection Molding
J.L. Golmanavich and J. Nielson, AT&T ............................................................................................... 597

The Influence of Variable Injection Rate on Residual Stress, Haze Patterns and Surface
Properties of ABS Moldings
L.R. Schmidt, LR Schmidt Associates ................................................................................................... 1070

Hierarchical Structural Gradients in Injection Moulded Poly(ethylene 2,6 Naphthalate) Parts
Y. Ulcer and M. Cakmak, The University of Akron .............................................................................. 1073

Advanced Quality Control for Powder Injection Molding via Die Cavity Instrumentation
K. Hens and R. German, Penn State University ...................................................................................... 1081

Process Studies in Precision Injection Molding
C. Liu and L.T. Manzione, AT&T Bell Laboratories .............................................................................. 1085

The Effects of Pressure, Volume, Temperature Data on Packing Analysis
L.L. D’Amico, Monsanto Chemical Co. .................................................................................................. 1090

Evolution of Molding Machine Controls and Parameter Setting
A. Bernhardt and G. Bertacchi, Plastics & Computer ............................................................................ 1097

Rapid Evaluation of Filling Simulations
T. Burton, Structural Dynamics Research Corporation ........................................................................ 1101

Optimization of CAE Software for Injection Molding
G. Batch, 3M Corporation ...................................................................................................................... 1108

Function Based Design for Injection Molding
Dr. D. Sebastian, Polymer Processing Institute ...................................................................................... 1114

*Process Control for Vinyl Molders
R.C. Neuman, R.C. Neuman Associate .................................................................................................... 1122

*A Case History of Conversion From ABS to PVC in a Monitor Housing
T. Minnick and D. Kerkhoff, The Pro Corporation ............................................................................... 1125

* Presented in a joint session
**Effects of Nozzle Length on Mold Filling Simulation Accuracy**
S. Weir, BF Goodrich .......................................................... 1129

**Understanding the Uses of Acrylic Processing Aids in Rigid PVC Injection Molding**
J.C. Stevenson and R.A. Einhorn, Rohm and Haas Company .................. 1134

**Successful Processing of Vinyl Compounds Through a Hot Runner System**
W. Hume, Kona Corporation .................................................. 1141

The Effects of Processing Conditions on Shrinkage of Injection Molded Polyethylene Thinwall Containers
S.D. Clark and D.K. Belcher, The Dow Chemical Company .................. 1590

Shrinkage and Filling of Ultra-High Molecular Weight Polyethylene (UHMWPE)
N. Shah and S. McCarthy, UMASS at Lowell .................................. 1597

A Model for the Filling of Cold Cavities with Solidifying, Semi-Crystalline Polymers
T. Papathanasiou, Imperial College
D. Guell, Los Alamos National Laboratory .................................... 1603

Simulation of the Packing of a Viscoelastic Melt in a Complex-Shaped Cavity
H. Kumazawa, Japan Synthetic Rubber Co., LTD. ............................. 1607

An Analytical and Experimental Study of Warpage and Shrinkage of an Injection Molded Part
S.J. Ni and K.K. Wang, Cornell University ..................................... 1612

Multi-Mode Warpage-Prediction and Experiment
C. Cuvellick, C. Friedl, V. Leo and P. Kennedy, Solvay S.A. and Moldflow Pty. Ltd. .......................... 1618

The Four W's of CAE: What, When, Where & Who
A. Bernhardt, Plastics & Computer .............................................. 1622

Industrial Metamorphosis
C. Austin, Moldflow Pty. Ltd. ................................................... 1626

Overcoming Obstacles in the Implementation of CAE Flow Analysis
B.L. Guinn, Apple Computer ....................................................... 1628

Pitfalls of Computer-Assisted Engineering in Thermoplastic Injection Molding
W. Light, Master Industries, Inc. .................................................. 1629

How to Successfully Utilize CAE Simulation Software for Plastic Part, Mold and Process Design
P. Medina, AC Technology Plastics Productivity Center ....................... 1632

*The Evaluation of Packing Analysis Software and Its Uses in Process Design
M.A. Yurkewicz, Penn State Erie ................................................. 2128

*Characterizing Shear Rates for Use in Mold Filling Software
M.D. Tyger, Penn State Erie ....................................................... 2132

*Optimizing Mold Cooling
J. Divinagracia, Western Washington University ................................ 2135

*Using Abductive Induction to Create a Math Model of an Injection Molding Process

How to Survive Leadframe Molding Without Dam Bars
G. Shevchuk, M. Acarlar, L. Manzione and D. Stefanik, AT&T Bell Laboratories ... 1163

The Effect of Injection Molding Parameters on the Conductivity of an ABS/IPD Alloy
J. Harding, DSM Engineering Plastics, Inc. ............................................... 1638

Characterization Techniques for Complex Dielectric Studies of Electroactive Polymers
L. Buckley and S. Kolesar, Naval Air Warfare Center .................................. 1644

Conducting Polyaniline as a Lithographic Resist
M. Angelopoulos, J. Shaw and K.-L. Lee, IBM Research Division-T.J. Watson Research Center ... 1647

Conducting Amic Acid/Polyaniline Blends
N. Patel, IBM Technology Products ........................................................... 1650

Process Factors Contributing to Variations in Molecular Weight, Dissolution Rate,
and Glass Transition in meta/para Naphthol Novolac Resins Used in Photoresists
M.D. Holloway, University of Massachusetts-Lowell .................................. 1654

Engineering Optimization of Polyglutarimide for Photoresist Applications
M.D. Holloway, University of Massachusetts-Lowell .................................. 1657

Analytical Tools for Adhesive Process Development
K. Macneal, Digital Equipment Corporation .............................................. 1660

THERMOFORMING DIVISION

Procedure for Remanufacturing Worn Thermoforming Equipment
S. Rosen, Mold Systems Corp. ................................................................. 174

Role of Laser Technology in Thermoforming Industry
M. Tabrizi, University of Wisconsin
M. Baldwin, Iowa Laser Technology ............................................................. 178

Some Design Guidelines for Plug Assists
L.J. Throne, Sherwood Technologies, Inc. .................................................. 182

* Presented in a joint session
Large Deformation Finite Element Analysis of Various Thermoforming Processes
W.N. Song and S.A. Meguid, University of Toronto .................................................. 191

RTM Reinforcement of Thermoformed Parts
P. Sampson and F. Howatineck, ICI Acrylics Inc. ......................................................... 626

Highly Thermofomable Polyolefin Alloys
A. Scheibelhoffer, A. Wimoliakatsak, B. Leonard and D. Chundury, Ferro Corporation .... 629

Acrylic Modified Polypropylene for Thin Gauge Thermoforming: Improved Processing Properties and Economics
K.A. Albert, C.A. Cruz and R.W. Johnson, Rohm and Haas Company ............................. 633

An Analysis of the Thermofomability of Polypropylene Foam
P. Sunderland and J. Manson, Ecole Polytechnique Federale de Lausanne ..................... 638

The Case for Using Conventional 3 Axis CNC Machinery for Trimming Pressure Formed Parts
R. Freeman, Freetech Plastics ........................................................................ 646

ENGINEERING PROPERTIES & STRUCTURE DIVISION

Double-Stage Crystallization of Poly(ether ether ketone) and its Blends with Poly(ether imide)
H.-L. Chen and R.S. Porter, University of Massachusetts ................................................ 196

Miscibility and Cocrystallization in Homopolymer-Segmented Block Copolymer Blends
K.P. Gallagher, X. Zhang and J.P. Runt, Penn State University .................................... 199

Properties of Polyphenylsulfone (PPSF) Blends with Polysulfone (PSF) and Polyethersulfone (PES)
M.J. El-Hibri and B.L. Dickinson, Amoco Performance Products, Inc ............................ 202

Compatibilization of Polyamide/Polyolefin Blends with Functionalized Styrenic Block Copolymers
M.J. Modic, Shell Development Company .................................................................. 205

A Morphological Study of Injection Molded HDPE/PA6 Blends
S. Fellahi, B. Fisa and B.D. Favis, Ecole Polytechnique de Montreal ............................... 211

Block Copolymers From Melt Transesterification of Poly(Aryl Ether Ketone Carbonates) and Polycarbonate
B. Dean, Amoco Performance ...................................................................................... 220

Morphology and Properties of Epoxy Resins Containing Functionalized Perfluoroether Oligomers
L. Mascia and F. Zitouni, Loughborough University of Technology ............................... 223

Beneficial Effects of E-GMA Copolymers on Reactive Blending of PC and PET
K. Chikanari, N. Yamaguchi and T. Ohmae, Sumitomo Chemical Co. ......................... 229

Rheology of Reactive Processes with Phase Separation
A.Y. Malkin, Research Institute For Plastics ................................................................. 233

Solution and Melt Chemical Modification of ABS: Methods and Characterization
M. Tellez, F. Rodrigues, M. Mondragon and L.F. Ramos, Centro de Investigacion en Quimica Aplicada ............................................................... 237

Heterogeneous Nucleation of Semi-Crystalline Polymers
R. Palz, P. Nigam and R.D. Wesson, Louisiana State University ...................................... 242

Kinetics of Crystallization of Poly(Ethyene Terephthalate)
K.T. Nguyen and G. Prevost, Industrial Materials Institute ........................................... 245

Crystallization Kinetics During Biaxial and Uniaxial Extension of Poly(Vinylidene Chloride/Vinyl Chloride) Copolymer Film
K.A. Toney, Dow Brands L.P. ......................................................................................... 252

A Fast Dual Wavelength Optical Technique to Study Crystallization in Pre-Oriented PET Films
H. Venkateswaran and M. Cakmak, The University of Akron ......................................... 257

*Mechanical Property-Structure Relationships in Linear Aromatic Polyimide Films-Part I
T.L. St. Clair, J. Dezem and C. Croall, NASA Langley Research Center .......................... 650

*Mechanical Property-Structure Relationships of Linear Aromatic Polyimide Films-Part II
T.L. St. Clair, J. Dezem and C. Croall, NASA Langley Research Center .......................... 650
*Use of FDEMS Sensing for In-Situ, On-Line Monitoring of Degree of Cure During Polymerization of a 2-Stage, High Performance RTM Composite Resin
D. Kranbuehl, D. Polis, C. Short and Y. Wang, The College of William and Mary ......................................................... 653

*The Relationship of Morphology to Properties in Spin Coated Polyimide Films
J.C. Coburn and M.T. Pottiger, DuPont ........................................ 653

*Morphological Composites from Polyimide Precursor Solutions
C. Feger, R. Saraf and R. Haring, IBM ........................................ 660

*ARYL Substituted Rod-Like Aromatic Polyimides: One-Step Synthesis and Precursor Route
K.H. Becker, R. Glesa and H. Schmidt, University of California ............. 667

*Characterization of Polyamide 6 Synthesised in a Twin-Screw Extruder
P.R. Hornsby, J.F. Tung and K. Tarverdi, Brunel University .................... 470

*Processing and Properties of Polyamide 6/Polyethylene terephthalate Blends
W. Michaeli and A. Grefenstein, Institut Fur Kunststoffverarbeitung ........ 474

*Reactive Extrusion Grafting of Polyamides to Polyglutarimides
M. Hallden-Abberton, Rohm and Haas Inc ..................................... 481

*Thermoplastic Composites from Post-Consumer Mixed Plastics Modified for Improved Adhesion
J. Grenci, S. Dey, C. Jacob, A. Patel, S.S. Dagli, S.H. Patel and M. Xanthos,
Polymer Processing Institute .................................................... 488

*In-Situ Compatibilization of PPE/Polyolefin Copolymer Blends by Reactive Melt Blending
S.G. Cottis, K.M. Natarajan, D. Elwood and X. Xu, Enichem America, Inc. .... 492

*Continuous Thermal Degradation of Polypropylene in Single and Twin Screw Extruders
K. Ebner and J.L. White, The University of Akron ................................ 499

Miscibility in Blends of Acidic Polymers with Amorphous Organic and Inorganic Polymers Containing Etheric Side Groups
C.J.T. Landry, B.K. Coltrain, D.M. Teegarden and W.T. Ferrar, Eastman Kodak Company .................................................. 674

The Phase Behavior of Binary and Ternary Mixtures of Polymers Containing 4-Vinyl Phenol, a-Decyl Methacrylate and Ethylene Oxide
M.M. Coleman, Y. Xu and P.C. Painter, The Pennsylvania State University 680

J.F. Graf, General Electric Corporation ........................................ 680

Development of Miscible Blends by Intrapolymer Repulsion Effects: Blends of Polycarbonate and Polystyrene Ionomers
X. Lu and R.A. Weiss, The University of Connecticut ........................... 684

BLENDS OF SULFONATED POLYESTER IONOMERS WITH POLYXYLENYL ETHER
H. Tomita and R. Register, Princeton University ............................... 687

Rheo-Scattering Studies of the Phase Behavior of Polymer Blends Under Flow
R. Wu, M.T. Shaw and R.A. Weiss, The University of Connecticut ............ 694

Rheological Characterization of PP/PS Alloys
M.C.T. Huang, C.H. Wei-Berk and D. Done, Himont, USA, Inc. ............... 700

Droplet/Fibre Transitions in Immiscible Polymer Blends Generated During Melt Processing
N. Chapteau, C. Alepin and B.D. Favis, Ecole Polytechnique de Montreal 706

Compression Molding of Drawn Polypropylene Vectra A Strands
A.A. Handlos and D.G. Baird, Virginia Polytechnic Institute and State University ................... 1170

Self-Reinforced LCP-LCP Prepregs and Laminates
R. Ding and A.I. Isayev, The University of Akron ................................ 1176

Processing of Liquid Crystal Polymer Reinforced Polyethylene Blends for Thin Film Applications
T.C. Hsu and I.R. Harrison, The Pennsylvania State University .............. 1183

Dow Constrained Geometry Catalyst Technology (CGCT): New Rules for Ethylene a-Olefins Interpolymers—Controlled Rheology Polyolefins
S. Lai and G.W. Knight, The Dow Chemical Company .......................... 1188

Thermal and Mechanical Characterization of Very Low and Ultra-Low Density Polyethylenes
L. Wood, T.K. Ling and S. Westphal, Baxter Healthcare ........................ 1193

Development of Crystalline Morphology in Polyethylene Blown Films Using Small-Angle X-ray Scattering
A. Gupta, D. Simpson and I. Harrison, The Pennsylvania State University........ 1201

The Effect of Processing Parameters on the Morphologies and Mechanical Properties of Polyethylene Blown Films
D.M. Simpson and I.R. Harrison, The Pennsylvania State University ........ 1206

* Presented in a joint session

ANTEC '93/xix
Properties of "Super Strength" Hexene Film Resins
V.J. Crotty and V. Firdaus, Mobil Chemical Company ........................................ 1210

Transesterification of Poly(ethylene 2,6-naphthalene dicarboxylate)/Poly(ethylene terephthalate) Blends
M.E. Stewart, A.J. Cox and D.M. Naylor, Eastman Chemical Company ...................... 1222

Peroxide Modification of a Multicomponent Polymer Blend for Recycling
T. Vivier and M. Xanthos, Polymer Processing Institute ......................................... 1227

P. Brent, Elf Atotech ................................................................. 1227

Functionalized Elastomer Modification of Aromatic/Aliphatic Polyamide Blends
J. Parmer, M.L. LaForest and G. Smith, Allied Signal Incorporated .......................... 1232

Development of Processing Windows for Prediction of Graft Properties
in Functionalization of Polyolefins
H. Kotlar, Statoil Petrochemicals and Plastics .................................................... 1240

Reactive Compatibilization of HDPE/PET Blends-Part I: Effects of Sequence
of Component Addition
K.M. Kamdar and S.S. Dagli, Polymer Processing Institute .................................. 1249

Limits of Toughening by Localized Plasticization
S. Spiegelberg, A. Argon and R. Cohen, Massachusetts Institute of Technology ......... 1668

Residual Birefringence in Amorphous Plastic Products
G.D. Shyu and A.I. Isayev, The University of Akron ........................................... 1673

Self-Reinforcement of Polypropylene
M. Prox and G. Ehrenstein, Erlangen-Nurnberg University .................................. 1678

Aging Characteristics of Oriented Poly(Ethylene Terephthalate)
S. Mukherjee and S.A. Jabarin, The University of Toledo ....................................... 1683

Viscoelastic Properties of Oriented Ultra-High Molecular Weight Polyethylene Cords
L. Sinclair, D. McCammond and R.T. Woodhams, University of Toronto .................. 1687

The Process of Energy Absorption During Instrumented Izod Impact Testing
of Impact-Modified Rigid PVC
J.E. Weier and C.P. Hemenway, Rohm and Haas Company .................................... 1690

The Mechanical Response of Ternary Composites of Polypropylene With Organic
Fillers and Elastomer Inclusions
J. Jancar and A.T. DiBenedetto, University of Connecticut .................................... 1698

Blends of Thermotropic LCPs and Thermoplastics Polymers Structure Formation
During Melt-Processing and Mechanical Properties
G. Groeninckx, Catholic University of Leuven ..................................................... 1702

Semiﬂexible Liquid Crystalline Copolyesters and Their Blends with Commercial Thermoplastics
U. Pedretti and A. Roggero, Eniricerche S.P.A. .................................................... 1706

The Effect of Compatibilization and Mixing on the Mechanical Properties of a
Polypropylene/TLCP Blend
H.J. O'Donnell, H.H. Chen and D.G. Baird, Virginia Polytechnic Institute and State University ................................. 1711

Processing Studies of In-Situ Composites Based on Blends of Liquid Crystalline
Polymers with Engineering Thermoplastics
J.P. deSouza and D.G. Baird, Virginia Polytechnic Institute and State University ....... 1716

Incompatible Blends of Liquid Crystalline Polymers and Thermoplastics - Improvement
of Adhesion Between the Two Phases
C. Carfagna and E. Amendola, University of Naples “Federico II” ........................ 1722

Flame Retarding Polycarbonate/PET Blends Bromine vs Bromine/Phosphorus
J. Green, FMC Corporation ................................................................................. 1726

Tracking Index of Flame Retarded Nylon and PBT
R.L. Markelzich, Occidental Chemical Corporation .............................................. 1734

Recent Advances on the Use of Zinc Borates and Boric Oxide as Fire Retardants
K. Sehn and D. Ferr, U.S. Borax Inc. ..................................................................... 1739

XX/ANTEC '93

* Presented in a joint session
New Intumescent Phosphorus Fire Retardant Systems
M.T. Huggard, Polymer Additives Group .................................................. 1753

Effect of Calcium Carbonate on Properties of Irradiated PVC Compounds
P. Bataille, M. Mahlous and H.P. Schreiber,
Ecole Polytechnique de Montreal, Centre de Developpement des Techniques Nucleaires .................................................. 1757

Improvements in the UV Resistance of Flame-Retarded Styrenics:
An Experimental Design Approach
S.D. Landry, C.J. Nalepa and J.S. Reed, Ethyl Corporation .................................................. 1760

Reparation of Structurally Regular Poly (p-Phenylene) From Methyl 1,2,5-Dichlorobenzoxate
K. Kaeriyama, V. Chaturvedi and S. Tanaka, Research Institute for Polymers and Textiles ................................. 2318

Molecular Self-Assembly of Conducting Polymers: A New Process for
