Proceedings of the
13TH NORDIC SEMINAR ON COMPUTATIONAL MECHANICS (NSCM-13)
Oslo, 20-21 October, 2000

Jostein Hellesland, Harald Osnes and Geir Skeie (editors)
## Content

**Preface**

**Committee page**

### KEYNOTE SESSION 1

- **O. S. Hopperstad, T. Børvik and M. Langseth:**
  - Failure in structural impact - experimental and numerical studies
- **L. Nilsson:**
  - On finite element simulations in roadside safety design

### KEYNOTE SESSION 2

- **M. Lyly and R. Stenberg:**
  - Stabilized finite element methods for Reissner-Mindlin plates

### KEYNOTE SESSION 3

- **S. Krenk:**
  - Radiation boundary conditions for acoustic and elastic waves
- **J. Brauns:**
  - Non-linear behaviour of elastic and viscoelastic shells

### SESSION 1: Fluid dynamics I

- **J. Grue:**
  - Generation of large-amplitude internal waves in the ocean
- **K. A. Sørensen, O. Hassan, K. Morgan and N. P. Weatherill:**
  - An agglomerated multigrid hybrid mesh method for compressible flow
- **B. A. Pettersen Reif:**
  - Aspects of algebraic modelling for complex turbulent flows
- **K. Trulsen and B. Spjelkavik:**
  - Waves around moving bodies — Project "UNDA"

### SESSION 2: Adaptivity

- **P. Kettil, T. Ekevid and N.-E. Wiberg:**
  - Adaptive solid modeling using our program FEM90
- **I. Tiller, K. M. Mathisen and K. M. Okstad:**
  - Adaptive methods for shell problems with geometric and material nonlinearities
- **M. Perälä:**
  - A patch recovery method in connection with equal order FEM for 2D Stokes flow
- **M. Rüttel, F. Larsson, P. Hansbo and K. Runesson:**
  - Strategies for goal-oriented a posteriori error measures in nonlinear elasticity

### SESSION 3: Material/Composite modeling

- **A. Braunbrück and A. Ravasoo:**
  - Simulation of nonlinear wave interaction for elastic material properties evaluation
- **A. Salupere and O. Ilison:**
  - On solitonic structures in microstructured materials
- **A. Andersen, A. Osnes and J. Hellesland:**
  - Computational analysis of composite joints
M. Valdats and V. Tamups:
Numerical analysis of progressive delamination in DCB composite specimens 78

SESSION 4: Fluid dynamics II
D. Clanond and J. Grue:
Fast fully nonlinear simulations of water waves 82
J. Dalheim:
A CFD prediction procedure for interference and collision of multiple risers 86
K.-A. Mardal and H. P. Langtangen:
An effective iterative approach to a fully implicit mixed finite element formulation for the Navier-Stokes equations 89
D. J. Wood, A. Jensen and G. Pedersen:
Modeling of wave run-up 93

SESSION 5: Coupled analysis
B. Boström and M. Lu:
Manifold method in hydraulic fracturing analysis 97
N. H. Sharif and N.-E. Wiberg:
Numerical scheme of a coupled FE-IC technique for simulating sharp fluid interface in porous medium 101
B. Håggbland and G. Paulsson:
Modeling large strain thermo-mechanical behavior of semi-crystalline polymers 105
J. R. Høgsberg, J. Krabbenhøft and S. Krenk:
State space representation of bridge deck aeroelasticity 109

SESSION 6: Plasticity
O. Kristensson, N. J. Sørensen and B. S. Andersen:
A parallel Rayleigh-Ritz finite element method for unit cell problems 113
A. K. Mohammed, J. Amdahl and B. Skallerud:
Stress-resultant plasticity on the Morley element using a modified Ilyushin yield surface 117
K. Krabbenhøft and L. Damkilde:
Lower-bound limit analysis of plate structures using nonlinear programming 121
M. Reivinen and J. Freund:
A Mathematica application in metal plasticity 125

SESSION 7: Concrete modeling
D. Bosnjak and T. Kanstad:
Numerical simulation of temperature and strain development in the Maridal culvert 129
P. F. Takács and T. Kanstad:
Finite element modeling of prestressed concrete beams strengthened with carbon fiber reinforced polymer plates 133
J. Olofsson, D. Bosnjak and T. Kanstad:
Crack control of hardening concrete structures - Verification of a three-step engineering method 137

SESSION 8: Numerical methods
P. Hager:
The rational Krylov algorithm for nonlinear eigenvalue problems 141
F. Ivanauskas and T. Meskauskas:
On numerical algorithms for derivative nonlinear Schrödinger equation ........ 145

K. H. Karlsen, K.-A. Lie, J. R. Natvig and N. H. Risebro:
A fast marching method for 3D reservoir simulation .................... 147

SESSION 9: FEM

P. Touminen:
Static equation of an element (third part) (A unified theory of the stiffness, mixed and
flexibility methods) .................................................. 151

L. Damkilde:
A new accurate yet simple plate bending element with linear bending strains ... 155

V. Havu and H. Hakula:
An analysis of the approximation properties of a bilinear reduced strain element
in the case of an elliptic shell ........................................ 159

L. Wollebæk and K. Bell:
CrossX - example of an efficient GUI for typical 2D FEM analyses .......... 163

SESSION 10: Dynamics/Optimization

T. Ekevid and N.-E. Wiberg:
Parallel computing of wave propagation problems ........................ 167

P.-E. Austrell, M. Jönsson and A. K. Olsson:
A method to analyse the non-linear dynamic behaviour of carbon-black-filled rubber
components using standard FE-codes .................................. 171

J. Lellep and E. Tungel:
Optimization of stepped spherical shells of von Mises material ............. 175

N. L. Pedersen:
On optimization of laminated plates with prestress: Using topology optimization . 179

SESSION 11: Applications I

L. Beldie, G. Sandberg, P. A. Wernberg and L. Sandberg:
Paperboard packages exposed to static loads; finite element modeling and experiments 183

G. Sandberg, K. Persson, P.-A. Wernberg, B. Jönsson and M. Kahn:
Comment on a recent hardware benchmark for Lunarc ........................ 187

D.-E. Brekke, J. B. Jakobsen, R. Lie and B. Sandvik:
From Troll to Forum (Use of offshore methods in the analyses and postprocessing
of tall concrete buildings) ........................................... 191

L. Østergaard, H. Stang and L. Damkilde:
Load capacity of tap bolted connections in tension ........................ 196

SESSION 12: Nonlinear analysis

E. Steen and T. K. Østvold:
Buckling analysis of beam-columns using an incremental perturbation method .. 200

B. Häggbland and G. Paulsson:
On linearizations in large-strain viscoelasticity .......................... 204

J. M. Hansen:
A new approach to mechanism synthesis .................................. 208

S. Tarasovs and V. Tamuzs:
Plastic zone growth in macro-microcrack interaction .................... 212
SESSION 13: Shell

B. Skallerud, L. I. Myklebust and B. Haugen:
Efficient numerical simulation of nonlinear response of thin shells 214

J. Brauns:
Strength analysis of buckled thin-walled composite structures 218

J. Lellep and K. Torn:
Dynamic plastic response of circular cylindrical shells to dynamic loads 222

SESSION 14: Applications II

M. Lojander:
Parameters on geotechnical calculations 226

F. Rüdinger and S. Krenk:
Effective system properties in random vibration 229

F. Ivanauskas and R. Baronas:
The influence of the diffusion space geometry on behavior of a biosensor 233
