# TABLE OF CONTENTS

**PREFACE** ................................................................. xxxv

**Special Keynote Lecture**

A Century of Turbulence ................................................. 3  
*J. L. Lumley and A. M. Yaglom*

## I. Instabilities and Transition

Three-dimensional instability of two merging vortices ............... 15  
*P. Meunier, T. Leweke and M. Abid*

Zigzag instability and the origin of the pancake turbulence ........ 19  
*Paul Billant and Jean-Marc Chomaz*

Hysteretic transition from laminar to vortex shedding flow in soap films .......................................................... 23  
*V.K. Horváth, J.R. Cressman, W.I. Goldburg and X.L. Wu*

A resonance principle for spatially developing wakes ................. 27  
*Benoît Pier and Patrick Huerre*

Experimental Characterization of Polymer Effects on Two- and Three-Dimensional Shear Instabilities .................................. 31  
*O. Cadot and S. Kumar*

On steady-state flow solutions and their nonparallel global linear instability ............................................................... 35  
*V. Theofilis*

## II. Magnetohydrodynamics

Laminar-Turbulent Transition in an Electromagnetically-Levitated Molten Metal Droplet .................................................. 41  
*B. Abedian, R. W. Hyers, C. Bullard and G. Trapaga*
Bifurcation analysis of an electrically driven fluid layer ......................... 45
N. Seehafer and J. Schumacher

The Nonlinear Evolution of Disturbances to a Subsonic Mixing Layer
with Transverse and Coplanar Magnetic Fields ........................................ 49
R. Mallier

Simulations of turbulence subjected to gravitational and magnetic
fields ................................................. 53
S. Kenjereš and K. Hanjalić

On certain features of helical turbulent flows ................................. 57
H. Branover, O. Chkhetiani, A. Eidelman, E. Golbraikh and S. Moiseev

Helical turbulence properties in the laboratory and in nature .......... 61
A. Eidelman, H. Branover and S. Moiseev

III. Instabilities and Transition

Hydrodynamic fluctuations in Couette flow ........................................... 67
G. D. Chagelishvili, G. R. Khujadze and J. G. Lominadze

Dynamics of perturbations in plane Couette flow ............................. 71
H. Faisst, A. Schmiegel and B. Eckhardt

Modeling transitional plane Couette flow ........................................... 75
Paul Manneville

Laminar-Turbulent Coexistence following a Subcritical Transition to
Turbulence .................................................. 79
O. Dauchot and A. Prigent

Uncertainty of the transition threshold for Poiseuille flows ..................... 83
C. M. Casciola, A. Olivieri and R. Piva

Direct numerical simulations of subsonic plane Poiseuille flows
undergoing transition ................................................. 87
Y. Moez, H. Maekawa and K. Yamamoto

IV. Turbulence Control

Instabilities and control of transition in round and coaxial
jets ................................................................................. 93
C. B. da Silva and O. Métais

Experimental study of tuned and detuned resonant interactions of instability waves in self-similar boundary layer with an adverse pressure gradient .......................................................... 149
V.I. Borodulin, Y.S. Kachanov and D.B. Koptsev

Investigation of hypersonic boundary layer stability on cone with the help of artificial disturbances .................................................. 153
D. A. Bountin, A. A. Maslov, A. N. Shiplyuk and A. A. Sidorenko

Sensitivity Analysis Using Adjoint Parabolized Stability Equations for Compressible Flows ............................................................. 157
J. O. Pralits, C. Airiau, A. Hanifi and D. S. Henningson

Numerical simulation of the spatial evolution of the instabilities in a supersonic plane jet ............................................................. 161
A. Kudryavtsev and D. Khotyanovsky

VI. Transport and Mixing

Kinematic Simulation for particle pair diffusion .................................. 167
F. Nicolleau, J. C. Vassilicos, D. J. Thomson

Relative dispersion in fully developed turbulence .............................. 171
G. Boffetta

Turbulent mixing of a passive tracer in the Batchelor regime .............. 175
M.-C Jullien, P. Castiglione and P. Tabeling

The Kinetics and Geometry of Turbulent Mixing ............................. 179
E. Villermaux and J. Duplat

Averaged dynamics in the phase planes of a scalar field using DNS data .................................................. 183
J. Martin, C. Dopazo and L. Valiño

Inclusion of the effect of turbulent production in a generalization of Yaglom's equation .................................................. 187
L. Danaila and L. Mydlarski
VII. Instabilities and Transition

A Naimark-Sacker route to turbulence in a periodically forced flow
F. Marques, J. M. Lopez and J. Shen

The influence of streamwise modulation on the evolution of three-dimensional wavetrains
Marcello A. F. Medeiros

On Flow Reattachment By Periodic Excitation
A. Darabi, L. Lourenço and I. Wygnanski

Optimal control of bypass transition
M. Högborg, D. S. Henningson and M. Berggren

On harmonic perturbations in turbulent shear flows
N. Reau and A. Tumin

The Extension of CFD-Friendly Turbulence Modelling to Include Transition
J. Vicedo, S. Vilmun, W. N. Dawes, H. P. Hodson and A. M. Savill

VIII. Transport and Mixing

PDF computation of thermal mixing layer in grid turbulence
T. Bukasa, J. Pozorski and J. P. Minier

Application of an Eulerian Monte Carlo Field Method to the Simulation of the Filtered PDF in LES
C. Jiménez, C. Dopazo and L. Valiño

Large Eddy Simulation of Flow in Lean Premixed Prevapourised Combustor Geometries
G. Tang, Z. Yang and J.J. McGuirk

Turbulence Statistics and Scalar Transport in an Open-Channel Flow
Y. Yamamoto, T. Kunugi and A. Serizawa

Scalar Flux Measurements and Models of a Plume Emitting from a Wall Line Source Downstream of an Obstacle on the Wall of a Turbulent Boundary Layer
J.-Y. Vinçont, S. Simoëns, M. Ayrault and J.M. Wallace
Simultaneous measurements of scalar and velocity in variable density turbulent jets ................................................................. 239
_M. Amielh, L. Pictri and F. Anselmet_

IX. Boundary Layers and Free Shear Flows

Multi-scale structures in a turbulent near-wake .......................... 245
_Hui Li and Yu Zhou_

Topological Features of a Turbulent Wake ............................... 249
_G.A. Kopp, Francesc Giralt and A. Vernet_

Active control of the flow downstream of a swept fence .............. 253
_A. Huppertz and H.-H. Fernholz_

Numerical simulation of forced turbulent flow over a fence .......... 257
_A. Orellano and H. Wengle_

Experimental investigation of two-point correlations in a separated flow .......................................................... 261
_Lars Sætran and Bård Venås_

Study of a turbulent separated flow using HPIV ........................ 265
_K. von Ellenrieder, J. Kostas and J. Soria_

Recovery of a turbulent boundary layer behind a swept, rearward-facing step .............................................................. 269
_Hans-J. Kaltenbach_

Karlhunen–Loève expansion (POD) of the flow behind a swept, rearward-facing step .......................................................... 273
_Werner Jürgens and Hans-Jakob Kaltenbach_

Unilateral-Average Based Study of Incompressible Turbulent Mean Flow and Coherent Flow ................................................. 277
_Ge Gao and Yan Yong_

X. Geophysical Turbulence

Three-dimensional instability of columnar cyclone-anticyclone pairs .................................................................................. 283
_Y. Afanasyev_

</table>
Investigation of wall structures in a turbulent channel flow using stereo PIV ......................................................... 341
G. Ciruolo and G.P. Romano

DPIV Studies of Turbulent Boundary Layers ................................. 345
M. Onorato, G. M. Di Cicca, G. Iuso and P. G. Spazzini

PIV measurements in a high Re turbulent boundary layer ................. 349
Kristian Angele and Barbro Muhamad-Klingmann

XII. Geophysical Turbulence

Direct numerical simulation of mixing in geophysical flows ............. 355
Wolfgang Gerlinger, Kai Schneider and Henning Bockhorn

Algebraic parametrizations for the triple correlations in modelling the shearless turbulence mixing layer ..................................... 359
V. Grebenev and B. Ilyushin

PDF Construction for Modeling the Pollutant Dispersion in Convective Atmospheric Boundary Layer ...................................... 363
B. B. Ilyushin

Turbulent transport across a sheared inversion at the convective boundary layer top .......................................................... 367
E. Fedorovich and J. Thäter

On the generation of turbulence by baroclinic instability in the upper ocean ........................................................................... 371
P. Ripa

Sensitivity of rhythmic oblique bar generation to wave-driven turbulence in the surf-zone ...................................................... 375
F. Ribas, A. Montoto and A. Falqués

Invited Lectures

Laboratory modeling of geophysical turbulence ................................ 379
P. F. Linden, J. N. Hacker, B. M. Boubnov and S. B. Dalziel

Large eddy simulation of turbulent, nonpremixed combustion .......... 385
Parviz Moin, Charles Pierce and Heinz Pitsch
XIII. Boundary Layers and Free Shear Flows

High Reynolds number turbulent boundary-layer experiments .................. 395
Jens M. Österlund and Arne V. Johansson

Flow structures in high Reynolds number turbulent boundary-layers ...... 399
B. Lindgren, J. Österlund and A.V. Johansson

Structure of Turbulence in the Logarithmic Layer and its Mechanism ..... 403
Y. Miyake, K. Tsujimoto, N. Sato and Y. Suzuki

Kinetic energy, enstrophy and strain rate in near-wall turbulence ......... 407
N.D. Sandham and A. Tsinober

On order and accuracy of the stochastic estimation of the flow
structure associated with surface pressure events in a turbulent
boundary layer ........................................................................... 411
A. Naguib and C. Wark

Reynolds-stress budgets from a wall-bounded adverse-pressure-gradient
flow ........................................................................................... 415
G. N. Coleman, J. Kim and P. R. Spalart

Scaling of the near-wall layer beneath a three-dimensional turbulent
separation bubble ........................................................................ 419
P.E. Hancock and J.R. Hardman

XIV. Turbulent Reacting Flows

A geometric criterion for non-equilibrium and triple flame domains ....... 425
W. Kollmann, J. H. Chen and H. G. Im

Edge flame and partially premixed flamelets in nonpremixed combustion . 429
Valérie Favier and Luc Vervisch

The effects of combustion on turbulence in high speed mixing
layers ........................................................................................... 433
F. Ladeinde, E. E. O’Brien and W. Liu

Compressibility Effects on Scalar Mixing in the Turbulent Reacting
Shear Layer ............................................................................... 437
C. Pantano and S. Sarkar
Subgrid Scale Variance and Dissipation of a Scalar Field in Large Eddy Simulation Combustion Models .................................................. 441
C. Jiménez, F. Ducros and B. Cuenot

Large Eddy Simulation of a Counterflow Configuration with and without Combustion: Mixing and Flowfield ............................................. 445
A. Kempf, H. Forkel, J.-Y. Chen, A. Sadiki and J. Janicka

Large eddy simulation of a turbulent premixed V-shaped flame ............ 449
M. Boger and D. Veynante

XV. Boundary Layers and Free Shear Flows

The surface region of rough-wall boundary layers ................................ 455
Alison Ploss, Ian Castro and Hong Cheng

Space-Time Characteristics of the Wall Shear-Stress Fluctuations in a Turbulent Boundary Layer with Transverse Curvature ......................... 459
Dongshin Shin and Haecheon Choi

The Influence Of Wall-Porosity Upon The Near-Wall Turbulence Dynamics ..................................................................................... 463
M. Uhlmann, A. Pinelli, J. Jiménez and G. Kawahara

Similitudes in turbulent near-wall flows with injection and suction ......... 467
I. I. Vigdorovich

Impact of localized unsteady blowing on the near wall turbulence ........ 471
S. Tardu

Changes in turbulent structure in a boundary layer due to local injection ......................................................................................... 475
P.-Á. Krogstad

Receptivity of boundary layers under centrifugal forces ......................... 479
N. Yurchenko

The effect of long chain polymers on the structure of wall turbulence ...... 483
E. De Angelis, C. M. Casciola and R. Piva

Direct interaction between highly-entangled polymers and small-scale coherent structures in a turbulent polymer-solution flow .................... 487
Y. Hagiwara, T. Imamura, S. Takagaki and M. Tanaka
XVI. Turbulent Reacting Flows

Modeling of Mixing Processes in non-Isothermal and Combusting Flows ................................................................. 493
R. P. Lindstedt and E. M. Váos

Probability Density Function Modelling of an Axisymmetric Combustion Chamber ..................................................... 497
W.P. Jones and R. Weerasinghe

Implementation and Validation of an Adaptive Particle PDF Transport Method ............................................................ 501
M. Pfitzner and I. Romaschov

Simulation of turbulent spray combustion in a full-scale gas turbine combustor ......................................................... 505
S. Menon

The Impact of Buoyancy and Flame Structure on Soot and Radiation Emissions from a Turbulent Flame .............................. 509
W. Kollmann, J. Auston, R.L. Vander Wal and I.M. Kennedy

XVII. DNS / LES

A generalised view on mixed models ........................................ 515
J. Meyers, M. Baehnans and C. Lacor

Assessment of subgrid-scale models in dissipative vortical structures ...... 519
Kiyosi Horiuti

Multifractal Scale-Similarity in Subgrid-Scale Turbulence Modeling ...... 523

A LES model based on the spectral decay of the kinetic energy ........ 527
F. Bouchon and T. Dubois

On energy and pressure backscatter in incompressible isotropic turbulence ................................................................... 531
S. Ossia and M. Lesieur

Large-eddy simulation of turbulent mixing layers .......................... 535
Elias Balaras, Ugo Piomelli and James M. Wallace
Rapid and slow contributions to the turbulent stress tensor and inverse modeling in a turbulent mixing layer .......................................................... 539
B.J. Geurts, I.C.C. de Bruin and S. Sarkar

Spatial development of a 3D compressible turbulent mixing layer .......... 543
L. Doris, C. Tenaud and L. Ta Phuoc

A-Posteriori Tests of a New SGS Model: LES of Fully Developed Pipe Flow ................................................................. 547
C. Brun, T. J. Hüttl and R. Friedrich

XVIII. Two Phase Flows

Settling velocity and clustering of particles in an homogeneous and isotropic turbulence .................................................................................. 553
F. Hainaux, A. Aliseda, A. Cartellier and J. C. Lasheras

Two-way coupling effect on settling velocity of small heavy particles in homogeneous turbulence ................................................................. 557
M. Tanaka, N. Komai, Y. Maeda and Y. Hagiwara

Direct numerical simulation of particle dispersion in a spatial mixing layer ................................................................................................. 561
Z. W. Hu, K. H. Luo and X. Y. Luo

Measurements and LES Modeling of Dispersion in a Turbulent Two phase round Jet ......................................................................................... 565
I.M. Kennedy, P.J. Santangelo and W. Kollmann

Initial distribution of bubbles injected into a turbulent water jet and its effect on the final bubble size PDF ......................................................... 569
C. Martínez-Bazán, J.L. Montañes and J.C. Lasheras

The Breakup Time of a Droplet in a Fully-Developed Turbulent Flow ........................................................................................................... 573
C. Eastwood, A. Cartellier and J. C. Lasheras

Experiments on Particle-Turbulence Interaction in a Backward-Facing Step Flow ............................................................................................ 577
T. Vogt and U. Renz

Partially premixed turbulent combustion in spray ..................................... 581
J. Réveillon and L. Vervisch

Modelling inter-particle collisions in Lagrangian approaches .................. 585
P. Achim, A. Berlemont and Z. Chang
XIX. DNS / LES

Application of Optimal LES .................................................. 591
_J.A. Langford, S. Völker, P. Venugopal and R.D. Moser_

Large Eddy Simulation of High Reynolds Number Flows ................. 595
_C. Pureby and F.F. Grinstein_

Lagrangian methods for the tensor-diffusivity subgrid model ............. 599
_Piet Moeleker and Anthony Leonard_

Wavelet Cross-Correlation Analysis of Turbulent Mixing from Large-Eddy-Simulations ..................................................... 603
_S. Sello and J. Bellazzini_

Sidewall boundary layer instabilities in confined swirling flow .......... 607
_H. M. Blackburn_

Convective turbulence of gaseous helium in a closed domain: a look inside the cell ............................................................... 611
_R. Verzicco and R. Camussi_

XX. Modelling

Low-order models derived from POD-Galerkin approximations for separated turbulent flows ..................................................... 617
_A. Lombard, P. Sagaut, J.P. Bonnet and J. Delville_

Geometry and statistics in Lagrangian dispersion .......................... 621
_A. Pumir, B. Shraiman and M. Chertkov_

Using Rapid Distortion Theory to interpret experiments on stably stratified turbulent shear flows ........................................... 625
_D. D. Stretch, J. W. Rottman, K. H. Keller and C. W. Van Atta_

Nonlinear RDT theory of near wall turbulence ................................ 629
_S.V. Nazarenko, N.K.-R. Kevlahan and B. Dubrulle_

Decaying two-dimensional turbulence in a bounded domain .............. 633
_H.J.H. Clercx and G.J.F. van Heijst_
Invited Lectures

Some Open Computational Problems in Wall-Bounded Turbulence ............... 637
Javier Jiménez

Low-Pressure Vortex: The Role in Turbulence Dynamics ......................... 647
S. Kida

XXI. DNS / LES

Appearance and Alignment with Strain Rate of Coherent Fine Scale Eddies in Turbulent Mixing Layer ......................................................... 655
M. Tanahashi, S. Iwase and T. Miyauchi

DNS of flow around a circular cylinder at a subcritical Reynolds number with cartesian grids ................................................... 659
F. Tremblay, M. Manhart and R. Friedrich

Reynolds number effect on turbulent structures in a pipe flow via DNS ......................... 663
S. Satake and T. Kunugi and R. Himeno

The directional dissipation scale: a criterion for grid resolution in direct numerical simulations ................................................... 667
M. Manhart

Analysis of coherent structures in turbulent channel flow using the orthogonal wavelet representation. ............................................. 671
D. C. Dunn and J. F. Morrison

Near-wall structures in turbulent rotor-stator flow ................................. 675
M. Lygren and H. I. Andersson

Triadic interaction of vorticity, strain rate, and scalar gradient in stably stratified homogeneous sheared turbulence ............................. 679
K.K. Nomura and P.J. Diamessis

XXII. Modelling

Spectral reduction: a statistical description of turbulence ....................... 685
John C. Bowman, B. A. Shadwick and P. J. Morrison
A spectral closure applied to anisotropic inhomogeneous turbulence ...... 689
H. Touil, J.P. Bertoglio and S. Parpais

A numerical algorithm for efficiently solving spectral closure equa-
tions ........................................................................................................... 693
T. Gotoh and Y. Kaneda

Local Energy Transfer theory in forced and decaying isotropic tur-
bulence ........................................................................................................ 697
W.D. McComb and A.P. Quinn

Consolidated expansions used in modeling anisotropic turbulence in a
channel flow ............................................................................................... 701
S.T. Smith and K. Santy-Ateyaba

XXIII. Compressible Turbulence

Compressibility effects in grid generated turbulence ......................... 707
Yiannis Andreopoulos

Large Eddy Simulation of a Mach 0.9 turbulent jet ................................ 711
B.J. Boersma and S.K. Lele

LES of Shock-Boundary-Layer Interaction with the Approximate
Deconvolution Model .............................................................................. 715
S. Stolz, N.A. Adams and L. Kleiser

Relaxation of super/hypersonic boundary layer behind interaction with
shock wave/expansion fan ....................................................................... 719
A.V. Starov and M.A. Goldfeld

XXIV. Vortex Dynamics

Multipolar instability of a vortex in a deformed cylinder ...................... 725
C. Eloy, P. Le Gal and S. Le Dizès

Decay of perturbations near the centre of a strong vortex ................. 729
K. Bajer, A.P. Bassom and A.D. Gilbert

Energy dissipation in spiral vortex layers wrapped around a diffusing
straight vortex tube .............................................................................. 733
G. Kawahara, S. Kida, S. Yanase and M. Tanaka
Vortex-wave conversion in high shear flows ........................................... 737
G. D. Chagelishvili, A. G. Tevzadze, G. Bodo, 
P. Rossi and G. T. Gogoberidze

Experimental study of large-scale coherent structures with helical
symmetry of vorticity ................................................................. 741
S.V. Alekseenko, I.S. Cherny and S.I. Shtork

Coherent Vortex Simulation (CVS) of a two-dimensional mixing
layer ......................................................... 745
Kai Schneider and Marie Farge

XXV. Intermittency and Scaling

The structures which cause intermittency ........................................ 751
Adrian Daniel Staicu and Willem van de Water

Remarkable features of multiplier distributions in turbulence .......... 755
P. Chainais, E. Lévéque, P. Abry and Ch. Baudet

On the complete statistical characterization of velocity increments in
turbulence ........................................................................... 759
St. Lück, Ch. Renner, J. Peinke and R. Friedrich

Exit time of turbulent signals ....................................................... 763
L. Biferale, M. Cencini, D. Vergni and A. Vulpiani

A Langevin equation for turbulent velocity increments ................ 767
P. Marcq and A. Naert

Intermittent structure functions and coherent structures in fully
developed turbulence ........................................................... 771
R. Camussi and R. Verzicco

Disentangling Scaling Properties in Anisotropic and Inhomogeneous
Turbulence ................................................................. 775
Irene Mazzitelli, Itai Arad, Luca Biferale and Itamar Procaccia

Scaling laws and vortical structures in homogeneous shear flow .......... 779
P. Gualtieri, C. M. Casciola, G. Amati and R. Piva

Self similarity and intermittency in a turbulent non-homogeneous
wake ................................................................. 783
O.B. Mahjoub, J.M. Redondo and A. Babiano
XXVI. Vortex Dynamics

Alignment properties in Fourier and wavelet filtered forced
two-dimensional turbulence ............................................. 793
Bartosz Protas, Kai Schneider and Marie Farge

Vortex tube extraction in three-dimensional turbulence
using
orthogonal wavelets ....................................................... 797
Marie Farge, Kai Schneider and Giulio Pellegrino

Flow and Reynolds Number Dependencies of Turbulent Vorticity
Fluctuations ................................................................. 801
R. A. Antonia and T. Zhou

Two-dimensional breakdown of a Burgers vortex subject to a rotating
strain field ................................................................. 805
S. Le Dizès

The Axisymmetric Vortex Breakdown Phenomenon .................. 809
Z. Rusak

Confined Vortex Breakdown in a Conical Cavity .................... 813
R. K. M. Seah, T. T. Lim, B. C. Khoo and J. M. Lopez

Modelling of the turbulent vortex breakdown as a transition from
column to conical helical vortices ................................... 817
T.O. Murakhtina and V.L. Okulov

DNS of vortex breakdown in swirling jets .......................... 821
W. Kollmann, A. Ooi, M. S. Chong and J. Soria

Lagrangian LES and vortex dynamics of forced unsteady round jets and
colliding vortices ....................................................... 825
H. Ishikawa, S. Izawa and M. Kiya

XXVII. Intermittency and Scaling

Intermittency in turbulent boundary layers .......................... 831
F. Toschi, E. Leveque and G. Ruiz-Chavarria
Turbulent mixing of a passive scalar: Statistics of the cliffs .......................... 835
F. Moisy, H. Willaime, J. S. Andersen and P. Tabeling

Velocity-acceleration structure function and Kolmogorov’s 4/5 law .......................... 839
Søren Ott and Jakob Mann

Scaling behavior of the vertical velocity field and of the intensity field in the solar photosphere .............................................. 843
F. Lepreti, B. Bavassano, F. Berrilli, R. Bruno, V. Carbone,
G. Consolini and E. Pietropaolo

An inner scale for dissipation of helicity in turbulence ........................................ 847
P. D. Ditlevsen and P. Giuliani

A universal law for tails of density pdf’s in multi-dimensional Burgers turbulence .............................................. 851
J. Bec, U. Frisch, K. Khanin and B. Villone

XXVIII. Miscellaneous

Fossils of turbulence and non-turbulence in the primordial universe: the fluid mechanics of dark matter .......................... 857
Carl H. Gibson

Power fluctuations in confined turbulence, analogy with finite size critical phenomena .............................................. 861
J.-F. Pinton, P.C.W. Holdsworth, R. Labbé,
S.T. Bramwell and J.-Y. Fortin

Reduction and long time behaviour of homogeneous turbulence under spatially constant mean-velocity gradient .............................................. 865
M. Oberlack and M. Barakat

Interaction of worm-like micelles with turbulent flow ........................................ 869
Z. Chara and J. Myska

Numerical Simulations and DPIV Measurements of Pulsatile Flow in Large Stenosed Arteries .............................................. 873
A. Borg and L. Fuchs

Quantification of anisotropy in an oscillating grid flow ........................................ 877
Jakob Mann and Søren Ott
Invited Lectures

Anomalous Scaling Laws in Turbulence ........................................ 881
   R. Benzi

Nonlinear self-sustained structures in shear flows .......................... 889
   Patrick Huerre

XXIX. Small Scale Features

Geometrical statistics in the atmospheric turbulent flow at Re_\lambda=10^4 ...... 895
   M. Kholmyansky, A. Tsinober and S. Yorish

Improvements to hot-wire measurements of turbulence energy dissipation . 899
   J.-J. Lasserre, M. Coantic and F. Anselmet

Turbulent energy scale-budget equations in a fully developed channel flow ........................................ 903
   L. Danaila, F. Anselmet, T. Zhou and R.A. Antonia

Energy and Temperature Dissipation Rates in a Cylinder Wake and Grid Turbulence ........................................ 907
   T. Zhou and R. A. Antonia

XXX. Miscellaneous

Oscillatory binary fluid convection in finite containers .................... 913
   O. Batiste, M. Net, I. Mercader and E. Knobloch

From Hard Turbulence to the Ultimate Regime in a Rough Rayleigh-Bénard cell ........................................ 917
   P.M. Roche, B. Castaing, B. Chabaud and B. Hébral

The phase diagram of Rayleigh-Benard turbulence .......................... 921
   Siegfried Grossmann and Detlef Lohse

Cryogenic Ultra-High Rayleigh Number Turbulence .......................... 925
   J.J. Niemela, L. Skrbek, K.R. Sreenivasan and R.J. Donnelly

Turbulence in liquid helium ........................................ 929
   D. Kivotides, C.F. Barenghi and D.C. Samuels
Decay of Grid Generated Classical and Superfluid Turbulence .......... 933
L. Skrbek and Steven R. Stalp

Modeling of quantum turbulence in superfluid $^4$He ................. 937
Tomasz Lipniacki

POSTERS

Instabilities and Transition

Numerical study of bifurcations for the two-dimensional Poiseuille flow .................................................. 943
Pablo S. Casas and Ángel Jorba

Nonlinear dynamics in a rapidly rotating annulus ..................... 943
D. Pino, I. Mercader, J. Sánchez and M. Net

Reentrant squares in Rayleigh-Bénard convection ..................... 944
A. Demircan and N. Seehafer

The research of laminar–turbulent transition in hypersonic three-dimensional boundary layer ......................... 944
M.A. Goldfeld

Stability of a helium II flow ............................................. 945
S. P. Godfrey, C. F. Barenghi and D. C. Samuels

Interactions of Three-dimensional Instabilities in Plane Mixing Layers ......................................................... 945
Jordi Estevadeordal

Holographic flow visualization for study of 3D vortex and flow instabilities ............................................... 946
J. Estevadeordal, S. Gogineni, L. Goss, H. Meng and M. Roquemore

Magnetohydrodynamics

Anisotropic zero-modes for a kinematic MHD model .................. 947
A. Lanotte and A. Mazzino

Helical and Chiral Dynamo .............................................. 947
O. Chkhetiani, E. Golbraikh, V. Pungin and S. Moiseev
Vortex evolution in helical turbulence flow

A. Kapusta, B. Mikhailovich, E. Golbraikh

Characterization of the intermittency in 2-D magnetohydrodynamic through the scaling properties of the PDFs of the turbulent fluctuations

L. Sorriso-Valvo, V. Carbone, P. Veltri, H. Politano and A. Pouquet

Response of the solar wind to incoming thermal or magnetic perturbations

R. Grappin, J. Léorat and A. Buttighoffer

**Turbulence Control**

Modification of a two-dimensional vortex street by a polymer additive

W.I. Goldburg, J.R. Cressman and Q. Bailey

Controlling a Separating Flow using Piezoelectric-Actuators

Y. Yokokawa, Y. Fukunishi and S. Kikuchi

**Transport and Mixing**

The numerical solution of the equation for one-point probability density function of a scalar in homogeneous turbulence

A.D. Chorny, V.A. Sosinovich

New development of the LMSE mixing model with accounting for intermittency

M.Gorokhovski and V.Sabel'nikov

Iso-scalar surfaces in a Direct Numerical Simulation of isotropic turbulence with scalar injection

M. Elmo, J. P. Bertoglio and V. A. Sabel'nikov

Mean-field theory of a passive scalar advected by a random velocity field with finite renewal time

T. Elperin, N. Kleeorin, I. Rogachevskii and D. Sokoloff

Effects of compressibility and finite renewal time of a random velocity field to intermittency of passive scalar fluctuations

T. Elperin, N. Kleeorin, I. Rogachevskii and D. Sokoloff
Two-particle dispersion in Kinematic Simulations .......................... 953
J. Dávila, E. Bravo-León, and J.C. Vassilicos

Measurement of Passive Scalar Statistics through Use of Compensated
Cold Wires ................................................................. 954
J. Lemay, J. S. Blais, A. Benaissa and B. Fleck

Statistics of a high Schmidt number passive scalar in the far-wake ....... 954
H. Rehab, R. A. Antonia and L. Djenidi

Mixing and coherent structures in jets in crossflow .......................... 955
A. Rivero, J.A. Ferre, F. Giralt

A Comparative Study of Heat and Mass Transfer by Impinging Jets on
Flat and Curved Surfaces .................................................. 955
H. Stapountzis, D. Tsi̇pas, and A. Stamatellos

Characterization of trailing vortex structures in stirred tanks ............. 956
Jos Derksen, John McLaughlin and Konstantinos Kontomaris

Boundary Layers and Free Shear Flows

Experimental assessment of stress-strain relation for coaxial
jets ................................................................................. 957
F. Schmitt, Ch. Hirsch and B. K. Hazarika

Effect of an accelerating co-flow on a turbulent jet ......................... 957
A. Califano, A.K. Prasad and J. Westerweel

A Comparative Experimental Investigation of a Turbulent Axisymmetric
Zero-Net-Mass Flux Jet and a Continuous Jet ............................... 958
J. Cater and J. Soria

Development of large-scale structures in confined jet shear layer ........ 958
S. Alekseenko, A. Bilsky, D. Markovich and V. Vasechkin

Experimental investigation of wall effects on the initial region of
turbulent round jets .......................................................... 959
A. Benaissa, B. A. Fleck, A. Pollard, and J.F. Morrison

Evaluating the accuracy of the LSE-POD technique in an axisymmetric
shear layer ................................................................. 959
D. Ewing and S. Woodward
A study of turbulent transport processes in the near wake of cylinder under controlled inflow oscillation
A. Jarža, M. Podolski

A numerical investigation of momentumless turbulent wake dynamics in a linearly stratified medium
G. G. Chernykh, B. B. Ilyushin, O. F. Voropayeva

A spatial structure of a flow in a axisymmetric sudden expansion
Noriyuki Furuichi, Yasushi Takeda and Yasuhiro Ozaki

Instability waves in separated swirling flows at bluff bodies
S. P. Bardakhanov

Enstrophy and Dissipation Within Flow Regions of a Turbulent Channel Flow
S. Wade, J. Soria, A. Ooi and M. S. Chong

Flow visualization of turbulent flow in an open channel with 2D fixed bed forms
Joselina Espinoza and Jorge Rojas

Experimental Investigation of Secondary Currents Using High-Temporal Resolved PIV
J. von Lukowicz, T. Rosenstein, T. Baur and J. Königter

Scaling the outer profiles of turbulent boundary layers
L. Castillo and W.K. George

Simulation of the intrusion of coherent free-stream perturbations in a subsonic boundary layer
H.C. de Lange and R.J.M. Bastiaans

Analysis of the Interactions between Large-Scale Streamwise EHD Structures and a Turbulent Boundary Layer
C. Marchioli, A. Soldati and M.V. Salvetti

Interaction of Endothermic and Exothermic Regions with a Turbulent Hypersonic Boundary Layer
M. Pino Martín and Graham V. Candler

Geophysical Turbulence

Correlation intervals of sea turbulence velocity field
G. A. Fedotov
Turbulence structure and mixing near gas-liquid interface ........................................ 966
*Derek Stretch and Mosa Chaisi*

On Tracers And Potential Vorticities In Ocean Dynamics ......................... 967
*Michael V. Kurgansky and Ettore Salusti*

Large Eddy Simulation of Flow Phenomena in Lakes and Reservoirs .......... 967
*K. Rettemeier, O. Bergen and J. Koengeter*

GOTM, a model for simulating dissipation measurements in estuaries and
open ocean .................................................. 968
*M. R. Villarreal, H. Burchard, K. Bolding and P. P. Mathieu*

Experiments on flow characteristics and resistance in vegetated
channels .................................................. 968
*A. Bateman, J.M. Redondo, D. Velasco and J.P. Martín Vide*

SAR Observations of the Gibraltar Oceanographic and Environmental
Features .................................................. 969
*J.J. Martinez Benjamin, A. Platonov and J.M. Redondo*

**Turbulent Reacting Flows**

Mixing Regimes in Gaseous Diffusion Flames ........................................... 970
*A. Cavaliere, D. Pappa and R. Ragucci*

Effect of chemical reactions and phase transitions on turbulent
transport .................................................. 970
*T. Elperin, N. Kleeorin and I. Rogachevskii*

Reduced Kinetic Mechanisms in Time Dependent Numerical
Simulations of Nonpremixed Flames ........................................... 971
*J. Hsu and S. Mahalingam*

**Direct Numerical Simulation**

**Large Eddy Simulation**

DNS of turbulent Couette flow and its comparison with turbulent
Poiseuille flow ........................................... 972
*K. Shingai, H. Kawamura, and Y. Matsuo*

Generation of Turbulent Inflow Data without Temporal Correlations .......... 972
*A. Spille and H.-J. Kaltenbach*
A priori and a posteriori tests of subgrid scale models for scalar transport ............................................................... 973
  C. Jiménez, C. Dopazo and L. Valiño

A-posteriori test of LES closure models for free surface flows. ........... 973
  R. Broglia, L. Bognetti, A. Di Mascio and B. Favini

Large Eddy Simulations of the flow around a square cylinder .......... 974
  E. Védy and P. R. Voke

Large-eddy simulation of flow around a rectangular obstacle in fully developed turbulent boundary layer – The effects of turbulence on a separation bubble – ......................................................... 974
  K. Nozawa and T. Tamura

Large Eddy Simulation of a turbulent flow in a heated duct ............ 975
  M. Salinas Vázquez and O. Métais

A Multi-domain/Multi-resolution Method with Application to Large-eddy Simulation ................................................................. 975
  P. Quéméré, P. Sagaut, V. Couallier and F. Leboeuf

Large-Eddy Simulation of an oscillatory boundary layer ................ 976
  V. Armenio and G. Vittori

On the relation between coherent structures and grid/subgrid-scale energy transfer in transitional and turbulent shear flows .......... 976
  C. B. da Silva

Two Phase Flows

Turbulence modification by particles; Experimental verification of a theoretical model .......................................................... 977
  G. Ooms, J. Pietryga, C. Poelma and J. Westerweel

Near wall effects on particles in a turbulent channel flow ............. 977
  P. Rambaud, A. Tanière, B. Oesterlé and M.L. Riethmuller

Modelling

Optimisation of two-equation turbulence models .......................... 978
  H. Bézard
A $k - \omega$ /Rapid Distortion Model applied to unsteady wall flows ................................................................. 978
P. da Costa and S. Tardu

Effect of inlet turbulence on convective flow between two vertical walls : k-ε low Reynolds turbulence model .................................................. 979
R. Bennacer, T. Hammami and A.A. Mohamad

Thermodynamically Consistent Turbulence Modeling of Turbulent Flows with Variable Mass-density ......................................................... 979
A. Sadiki

Prediction of the Reynolds stresses and higher moments in a developed turbulent flow in an axially rotating pipe ........................................ 980
B. B. Ilyushin and S. N. Yakovenko

Predictions of higher moments by a transported pdf model .................. 980
D. Lentini

Full velocity-scalar PDF approach for wall-bounded flows and computation of thermal boundary layers ..................................................... 981
J. Pozorski and and J. P. Minier

Asymptotic models for slow dynamics and anisotropic structure of turbulence in a rotating fluid ......................................................... 981
F. S. Godeferd, J. F. Scott and C. Cambon

Assessment of turbulence models of second order for the prediction of near-field aircraft plumes ......................................................... 982
A. Sadiki, A. Maltsev and J. Janicka

Influences of Buoyancy on Turbulence for Conditions of Heat Transfer by Combined Forced and Free Convection to Air in a Vertical Tube ...... 982
J. D. Jackson and Jiankang Li

Compressible Turbulence

Validation of the subgrid modelling by simulating a compressible turbulent flow in a 3D channel ................................................................. 983
L. Coquart, C. Tenaud and L. Ta Phuoc

Study of wake, vortex-shedding, and shock in a Transonic Compressor .... 983
J. Estevadeordal, S. Gogineni, L. Goss, W. Copenhaver and S. Gorrell
Intermittency and Scaling

Anisotropic Scaling Anomaly in Isotropic Turbulence ......................... 984
B. R. Pearson and W. v. d. Water

Effects of shear on small-scale properties in a Kolmogorov flow .......... 984
I. San Gil, S. Chen and K. R. Sreenivasan

Fractal skins of turbulence .............................................. 985
D. Queiros-Conde

Turbulent wakes of 3-D fractal grids ................................... 985
D. Queiros-Conde and J.C. Vassilicos

Temporal structures in Shell Models .................................... 986
F. Okkels

Wavelet Analysis of Intermittent Behavior of Pressure Fluctuations in
Separated and Reattaching Flows ....................................... 986
Inwon Lee and Hyung Jin Sung

The Scalings of Scalar Structure Functions in a Velocity Field with
Coherent Vortical Structures ........................................... 987
Md. Amirul Islam Khan and J. Christos Vassilicos

Coherent structures in shell models for passive scalar advection ........ 987
L. Biferale, I. Daumont, T. Dombre and A. Lanotte

Passive temperature pdf’s in fully developed turbulence .................. 988
C. Auriault, Y. Gagne and B. Castaing

From a Vortex Gas Model of Turbulence to Mellin Functions .............. 988
P. Borgnat, O. Michel, C. Baudet and P. Flandrin

The Scalings of Scalar Structure Functions in a Velocity Field with
Coherent Vortical Structures ........................................... 989
Md. Amirul Islam Khan and J. Christos Vassilicos

Vortex Dynamics

The definition and identification of a vortex revisited ..................... 990
B. Herrera, F.X. Grau and Francesc Giralt

Inhomogeneous turbulence near a large scale vortex ...................... 990
C. Simand, F. Chilà and J.-F. Pinton
Computation of equilibria between two corotating nonuniform vortices.  
U. Ehrenstein and M. Rossi

Experiments on the vortex structure of a wake behind a torus  
S. Yamashita and Y. Inoue

Topological complexity of a vortex tangle  
C. F. Barenghi, A. Marsden and D. C. Samuels

Length scales in turbulent superfluid vortex line tangles  
D. C. Samuels and D. Kivotides

Coherent Vortex Simulation (CVS) to compute two-dimensional turbulent flows using wavelets  
M. Farge, K. Schneider and N. Kevlahan

Miscellaneous

Dimension of the Attractor of Turbulence revisited: statistical mechanics considerations  
E. Segre and L. Rondoni

Self-amplification of the field of velocity derivatives in quasi-isotropic turbulence  
B. Galanti and A. Tsinober

On the calculation of streamwise derivatives from single-point measurements  
C. F. Stein, A. Bakchinov, J. Bergh and L. Löfdahl

Instantaneous frequency of the near wall singularities  
S. Tardu

Large scales features of the flow induced by precession of a rotating cylinder  
J. Léorat, P. Lallemand, J.L. Guermond and F. Plunian

Mean field hydrodynamics for turbulent flows subjected rotation  
A.S. Petrosyan and D.V. Tsygankov

Computation of turbulent flow around periodic obstacles using a Krylov-spectral method based on Brinkman penalization  
A. Cherhabili and N. K.-R. Kevlahan

Buoyancy generated turbulent flows in semi-enclosed regions: applications to oil-production technology  
M.K. Neophytou, R.E. Britter
On the role of the divergence of the velocity for variable density flows in mixed or natural convection ................................. 998
C. Rey

Cryogenic High Reynolds Experiment ........................................ 998
B. Chabaud, B. Hebral, S. Pietropinto, P. Roche, C. Baudet, Y. Gagne,
E. Hopfinger, C. Poulain, B. Castaing, Y. Ladam, O. Michel, A. Naert,
A. Bezaguet, J.-P. Dauvergne, P. Lebrun and R. Van-Weelderen

Experimental and numerical investigation of the transition convective motion in a cylinder ........................................ 999
Minerva Vargas, Fernando Sierra,
Andrey Avramenko and Eduardo Ramos

Experimental investigation and numerical simulation of the flow around a high speed train ........................................ 999
N. Paradot, C. Talotte, H. Garem, J. Delville and J.-P. Bonnet

AUTHOR INDEX ................................................................. 1001
