Third International Symposium on

CABLE DYNAMICS

PROCEEDINGS

Trøndheim (Norway), 16-18 August 1999
TABLE OF CONTENTS

preferred subject 1 : cable modelling

1/1. Application of contact mechanics to cable self-damping 1
C. Hardy, Claude Hardy International (Canada)
A. Leblond, Hydro-Québec – IREQ (Canada)
S. Goudreau, L. Cloutier, Université Laval (Canada)

1/2. An approach of damping in cables through finite element modeling of frictional interactions between elementary wires 7
D. Durville, Ecole Centrale de Paris – CNRS (France)

1/3. Experimental measurements of bending and damping properties of conductors for overhead transmission lines 13
A. Godinas, G. Fonder, University of Liège (Belgium)

1/4. Cable finite element of high accuracy 19
M. Aupérin, C. Dumoulin, Bouygues Travaux Publics (France)

1/5. Coupled axial/torsional response to impact loading of helical cables 25
M. Raoof, T.J. Davies, C.F. Scott, Loughborough University (United Kingdom)

1/6. Restrained bending characteristics of helical cables at terminations 31
M. Raoof, T.J. Davies, Loughborough University (United Kingdom)

1/7. Dynamics of marine risers in term of complex eigenmodes 37
G. Moe, NTNU (Norway)
C. Hoen, OffTek Sigma (Norway)

preferred subject 2 : methods of non-linear dynamics

2/1. Cable vibrations induced by harmonic horizontal displacements of one cable end – Theory and its verification by experiments under nearly real conditions 43
D. Tonis (Switzerland)
F. Reif, Stahlverbund Bausysteme GmbH (Germany)

2/2. cancelled

2/3. The influence of nonlinear material properties on whirling dynamics of taut strings 49
O. Gottlieb, M. Leamy, R. Poignant, Technion – Israel Institute of Technology (Israel)

2/4. Boundary conditions for the cable dynamics of tethered satellite systems 55
M. Schagerl, G. Wiedermann, H. Troger, Vienna University of Technology (Austria)

2/5. Galloping analysis of transmission lines with bundled conductors 61
H. Yamaguchi, X. Xie, Saitama University (Japan)
T. Yukino, Kansai Electric Power Co. (Japan)

2/6. Formation of loops and tangles in low tension cables : complex solutions 67
O. Gottlieb, Technion – Israel Institute of Technology (Israel)
N.C. Perkiss, University of Michigan (U.S.A.)
preferred subject 3 : fluid-structure interactions

Invited speech : On the vortex-induced fluid forces on oscillating cylinders
R.D. Blevins (U.S.A.)

3/1. Flow induced vibrations of line-like structures
G. Moe, M.O. Henriksen, NTNU (Norway)

3/2. Inclined cable aerodynamics – Velocity restricted response at high reduced velocity
M. Matsumoto, T. Yagi, D. Tsushima, Kyoto University (Japan)

3/3. paper not available

3/4. The aeroelastic behaviour of the OHTL expanded bundles
G. Diana, M. Bocciolone, F. Cheli, F. Resta, Politecnico di Milano (Italy)
A. Manenti, Universita degli Studi di Brescia (Italy)

3/5. Vortex induced vibrations of a catenary riser
K.H. Halse, Statoil (Norway)
K. Mo, H. Lie, MARINTEK (Norway)

3/6. On the vortex induced vibration on submarine cables: design optimization of wrapped cables for controlling vibrations
M. Falco, F. Resta, Politecnico di Milano (Italy)
F. Fossati, Universita degli Studi di Catania (Italy)

3/7. Coupled simulation of vortex induced vibration of slender structures as suspension bridges and offshore risers
T. Kvamsdal, K.M. Okstad, SINTEF (Norway)
K. Herfjord, Norsk Hydro E&P Research Centre (Norway)

3/8. cancelled

preferred subject 4 : methods for controlling dynamic response

Invited speech : Wind induced vibration control of inclined cable
M. Matsumoto, Kyoto University (Japan)

4/1. Development of cable for cable-stayed bridge with good performance to wind induced vibrations
Y. Kubo, H. Tanaka, N. Matsunaga, Kyushu Institute of Technology (Japan)

4/2. On the estimation of a 2x2 complex stiffness matrix of symmetric stockbridge-type dampers
A. Leblond, Hydro-Québec - IREQ (Canada)
C. Hardy, Claude Hardy International (Canada)

4/3. Damping devices against cable oscillations on Sunningesund bridge
I. Kovacs, Dynamic Consulting (Germany)
E. Strømmen, E. Hjorth-Hansen, NTNU (Norway)

4/4. Active control experiment of a large scale cable-stayed bridge mock-up
G. Magonette, F. Marazzi, Joint Research Centre (European Community)
F. Bossens, Université Libre de Bruxelles (Belgium)
C. Dumoulin, Bouygues (France)

4/5. Active tendon actuators for cable-stayed bridge
C. Dumoulin, Bouygues Travaux Publics (France)
preferred subject 5: industrial point of view

5/1. Wind induced stay cable vibrations - A case study
P.A. Irwin, Rowan Williams Davies & Irwin (Canada)
N. Alca, Buckland & Taylor (Canada)
N. Telang, A.G. Lichtenstein & Associates (U.S.A.)

5/2. A study on wind induced vibration of parallel suspenders observed at the Akashi-Kaikyo bridge
R. Toriumi, N. Furuya, M. Takeguchi, Honshu-Shikoku Bridge Authority (Japan)
M. Miyazaki, Y. Saito, Sumitomo Heavy Industry (Japan)

5/3. paper not available

5/4. Vibration control of fjord crossings in Norway
D. Loudon, Statnett (Norway)

5/5. Remote galloping studies on a 420 kV transmission line in Norway
S.M. Fikke, K.A. Halsan, A. Gerezgiher, Statnett (Norway)
D.G. Havard, Havard Engineering Inc. (Canada)
R. Stenseth, Barnard AS (Norway)

5/6. cancelled

5/7. Studies of conductor vibration fatigue tests, flexural stiffness and fretting behavior
L. Cloutier, C. Dalpé, A. Cardou, C. Hardy, S. Goudreau, Université Laval (Canada)

5/8. Cable Dynamics in the design of an undersea cable plow
J.J. Burgess, General Dynamics Advanced Technology Systems (U.S.A.)

Poster Session

p/1. Tele-monitoring of cable vibrations
H. Wenzel, Vienna Consulting Engineers (Austria)

p/2. Numerical simulation of galloping of a 4-bundle conductor under particular consideration of the damping mechanism
V. Groß, H.P. Wölfel, Technische Universität Darmstadt (Germany)

p/3. cancelled

p/4. cancelled

p/5. Field measurements of wind-induced vibrations of overhead transmission lines with fiber optic sensors
L. Bjerkan, SINTEF (Norway)

p/6. Aeolian vibrations
T. Kjørsvik, I.K.J. Nordberg, Norwegian University of Science and Technology (Norway)

p/7. Modelling of the dynamic behaviour of a laddermill, a novel concept to exploit wind energy
J.P. Meijer, W.J. Ockels, A.L. Schwab, Delft University of Technology (Netherlands)
p/8. Simulation of aeolian vibration of a conductor span with a stockbridge damper
J. Vecchiarelli, Atomic Energy of Canada
I.G. Currie, University of Toronto (Canada)
D.G. Havard, Havard Engineering Inc. (Canada)

p/9. cancelled

p/10. Non linear finite element modelling of the aeroelastic behaviour of a cable-stayed structure
N. Raimarckers, J.L. Lilien, Université de Liège (Belgium)

p/11. Energy dissipation based assessment of longitudinal wire loads and transmission line
cascading failure potential
M. Ostendorp, EPRI (U.S.A.)

p/12. paper not available

p/13. Vibrations induced on submarine cables by waves and currents in strait crossings
F. Cheli, A. Cigada, G. Diana, Politecnico di Milano (Italy)
F. Magnani, Pirelli Cavi e Sistemi (Italy)

p/14. Amplitude frequency characteristics of damper prototype DP60 for bundled transmission lines
E. Bahtovska, University 'St. Kliment Ohridski' (Macedonia)

p/15. cancelled

p/16. Assessment of damping devices for cables vibrating in higher modes by the use of multibody
dynamics
C. Kammel, RWTH Aachen (Germany)
D. Neuenhaus, INIT Gmbh (Germany)

p/17. paper not available

p/18. Fatigue of dynamic cables and umbilicals – State of the art
K.I. Ekeberg, Alcatel Kabel Norge AS (Norway)
