CONTENTS

Using RMA-2V to simulate flood dynamics along the upper Mary River in south-east Queensland, Australia
Amghar M. & Yu B.  Pg. 1
Reynolds stress measurements from wave field data
Blondeaux P., Stanton T., Thornton E. & Vittori G.  « 11
Change of sediment transport after dam construction
Bouno S., Tahara T. & Shimizu Y.  « 21
Nearshore sand transport modelling: application to Trucvert beach
Camenen B. & Larroudi P.  « 31
Fractional bed load transport rates during rising and falling flood stages
Çokgör S. & Diplas P.  « 41
Wind-driven flow in shallow water
Colombini M. e Stocchino A.  « 51
Mathematical modelling of wave propagation near southeastern Mediterranean coasts
Essa S. S.  « 61
3-D calculation of flow in the neighborhood of the dam for the Three-Gorge-Project (TGP) reservoir in Yangtze River
Fang H. W. & Rodi W.  « 71
Mature and immature debris-flows by solid load deduced from the study of acting stresses
Franzi L. & Bianco G.  « 81
Two mathematical models simulating a real-world debris flow
Ghilardi P., Natale L. & Savi F.  « 91
Dynamic bed stabilization of navigable rivers
Gölz E.  « 101
Analysis of the texture of gravel-beds using 2-D structure functions
Goring D. G., Nikora V. I. & McEwan I. K.  « 111
Entropy velocity distribution in a river
Greco M.  « 121
Preliminary experimental observations of upstream overdeepening
Guala M., Zolezzi G., Branca A. & Seminara G.  « 131
Circular scour around rubble-mound foundation on Sukmo-Choomoon tidal flat, Korea
Kim H.  « 141

Simulation of river basin and coastal zone morphodynamics and evolution
Klenov V.I.  « 151

Application of a three dimensional sediment transport model to large bed forms

Some morphological aspects of the Orinoco River
Lopez J.L., Pérez-Hernández D. & Saavedra I.  « 169

Experimental study of the wave boundary layer over rippled beds
Marin F.  « 179

Choice of grain size representation for morphological modeling
McArdell B.W. & Faeh R.  « 189

Extraction of channel networks from Vector Elevation Data with a new method of catchment partitioning
Menduni G., Riboni V. & Rulli M.C.  « 199

Morphodynamics and morphometry of nontidal protruding river deltas
Mikhailova M.  « 209

On the predictability of stable thalweg slopes
Pica M. & Preti F.  « 219

Waves volcanoes and rivers: coastal erosion in northwestern Columbia
Posada-Garcia L., Hoyos-Patíño F., Restrepo-Estrada A.
& Palacio-Zapata H.  « 229

A comparison between scaling properties of real and experimental braided rivers
Rosatti G.  « 239

Major agent for bridge pier scouring: downflow or horseshoe vortex?
Sarker M.A.  « 249

Physical and 2-d numerical models of free-surface flow over weir, using standard and RNG k-ε models with power-law and SMART schemes
Sarker M.A. & Rhodes D.G.  « 259
The influence of Coriolis force and external overrides on equilibrium morphodynamics in an idealized 3D channel model
Schramkowski G.P. & de Swart H.E.  ➔ 269

Transport of sediment into a channel branch in a river bend
Shafai-Bajestan M. ➔ 279

A beach profile evolution model incorporating turbulence closure
Smit F. & Mocke G.P ➔ 289

Guidelines for error assessment in models of long term coastal morphology
Southgate H.N. ➔ 299

Spatial and temporal variability of dune properties and bedload transport during a flood at a sand bed reach of the Dutch Rhine river system
ten Brinke W.B.M. & Wilbers A.W.E. ➔ 309

Experimental study in a meandering channel: 1. Analysis of bed topography
Termini D. ➔ 319

Experimental study in a meandering channel: 2. Analysis of "initial" flow pattern
Termini D. ➔ 329

Long-term changes in estuary morphology using the entropy method
Townend I. ➔ 339

Formulation of a four equations mathematical model of free surface flow in bends
Valiani A. ➔ 349

The performance of the stilling basin with diverging side walls
Vasani R.P. ➔ 359

Simulation of long-term morphological development in the Western Scheldt
Wang Z.B., Langerak A. & Fokkink R.J. ➔ 367

The use of two-dimensional morphological models in the Netherlands
Wolters A. ➔ 377
