Ceramic Materials and Components for Engines

Edited by
Jürgen G. Heinrich and Fritz Aldinger
## Contents

### I. Systems

- New Technologies in the Light of Materials .................................................. 1
- The Promise of SOFC Power Generation Technology ......................................... 3
- Ceramic Matrix Composites for Disk Brakes and Their Manufacturing Technologies .......... 7
- Ceramic Cutting Tools ..................................................................................... 13
- Practical Use of Ceramic Components and Ceramic Engines. ............................ 21
- Beta Ceramic in Zebra® and NAS Batteries .................................................... 27
- Oxygen Sensors for Lean Combustion Engines ............................................... 33
- Ceramic Gas turbine „CGT302“ Development Summary .................................... 39
- Glasses from the System RO-R₂O₃-SiO₂ as Sealants of High Chromium Steel Components in the Planar SOFC ................................................................. 51
- Lightweight and Wear Resistant CMC Brakes .................................................. 57
- Development of Ceramic Sheathed Type Thermocouple with High Heat Resistance and High Durability ................................................................. 63
- Advances in Hot Gas Filtration Technique ....................................................... 69
- Nano-Scaled Ceramic Membranes for the Filtration of Fine and Sticky Dust .............. 75
- Production and Characterization of TiCN-Based Materials for Cutting Tool Applications .......... 79
- Sensitivity Characterization to Flammable Gas .................................................. 85

### II. Performance / Reliability

- Evaluation of Mechanical Reliability of Si₃N₄ Nozzles after Exposure in an Industrial Gas Turbine ................................................................. 91
- Friction and Wear of Advanced Ceramics ......................................................... 97
- Lifetime Prediction for Silicon Nitride ............................................................... 103
- Standardising Measurement and Test Methods for Advanced Technical Ceramics ........ 109
- Investigations on the Stable Crack Growth of Indentation Cracks ......................... 115
- Prediction of Thermal Shock Resistance of Components Using the Indentation-Quench Test ................................................................. 121
- Ceramic Components for Metal Forming Tools ................................................ 127
- Effect of Grain Boundary Composition on High-Temperature Mechanical Properties of Hot-Pressed Silicon Carbide Sintered with Yttria .................................................. 133
- Thermal Shock Properties of SiALON Ceramics ............................................... 139
- Corrosion of Nonoxide Silicon-Based Ceramics in a Gas Turbine Environment .............. 145
- Mechanical Properties and Wear Behaviour of Differently Machined Silicon Nitride and Silicon Carbide Ceramic Surfaces ................................................................. 151
- Design of Wear Resistant Polycrystalline Alumina ............................................ 157
- Crack Growth of Ceramic Materials in Sliding Contact ...................................... 163
- Damage Detection in Tetragonal Zirconia Polycrystals (TZP) by Impedance Spectroscopy ................................................................. 169
- Reliability and Reproducibility of Silicon Nitride Valves: Experiences of a Field Test .......... 175
- Self-Mated Tribological Properties of Plasma Sprayed Chromium Carbide Coating .......... 181
- Role of Grain Size in Scratch Damage Resistance in Zirconias and Silicon Nitrides ....... 187
- Ceramic Coatings with Solid Lubricant Ability for Engine Applications ................. 193
- Tribological Behavior of Silicon Nitride/Steel Contacts under Lubricated Conditions ....... 199
- Optimization of the Brazilian Disc Test for Ceramic Materials ............................ 205
Grain Boundaries of SiC-SiO₂ Composite .................................................. 453
Millimeter Wave Sintering of Ceramics .................................................. 457
Internally Cooled Monolithic Silicon Nitride Aerospace Components .... 463
Preparation and High Temperature Strength of Gd₄Al₂O₉/MgO Composites. 469
Characterization of In Situ SiC-BN Composites ..................................... 471
Coating Experiments on Carbon Fibers Using a Continuous Liquid Coating Process .......................................................... 477
Effect of Al Component on Mechanical Properties in Al-Penetrated Alumina 483
Cavitation Creep in the Next Generation Silicon Nitride ......................... 487
Thermal Conductivity and Phonon Scattering Mechanisms of β-Si₃N₄ Ceramics 495
A High Thermal Conductive β-Silicon Nitride Substrate for Power Modules 499
Characterisation of the Pore Structure of Biomorphic Cellular Silicon Carbide Derived from Wood by Mercury Porosimetry .......................................................... 505
TBC Consisting of New Metal-Glass Composites .................................... 513
Aspects on Sintering of EB-PVD TBCs .................................................. 517
Crack Propagation in a Thermal Barrier Coating System ......................... 523
Porosity Graded Silicon Carbide Evaporator Tubes for Gasturbines with Premix Burners .......................................................... 531
Porous Ceramics Functional Cavities for System Innovation .................... 537
Feasibility Studies on Applying In Situ Single Crystal Oxide Ceramic Eutectic Composites in Non-Cooled High Efficiency Turbine System .................................................. 543
Synthesis and Property Tailoring of Reaction-Based Composites: The RBAO and the 3A Process .................................................. 549
Properties of Silicon Nitride/Carbide Nano/Microcomposites – Role of SiC Nanoinclusions and Grain Boundary Chemistry .................................................. 553
Layered Si₃N₅/(SiAlON+TiN) Composites with Self-Diagnostic Ability .......... 559
Multilayer C/SiC Composites for Automotive Brake Systems .................. 565
Sinter Additive Optimization in Processing of Aluminum Nitride for Heat Exchanger Components .................................................. 571
New Opportunity for Bimodal Microstructure Control in Silicon Nitride .... 577
Design of SiCN – Precursors for Various Applications ............................ 581
Gelatin Casting and Starch Consolidation of Alumina Ceramics ................. 587
Liquid-Phase Sintered Silicon Carbide Based Ceramics with AlN-Y₂O₃ and AlN-La₂O₃ Additives .................................................. 593
Slip Casting of ATZ Ceramics .............................................................. 599
The Preparation for Sintered Body of CeO₂ Based Complex Oxide in Low Temperature Solid Oxide Fuel Cells Using Colloidal Surface Chemistry .................................................. 605
Processing and Properties of TiC-Ni₃Al Composites ................................ 611
Ceramic Joints Between SiC Bodies: Microstructure, Composition, and Joining Strength .................................................. 617
Fatigue Behaviour of Ceramics Stressed Near Fatigue Limit under Rotary Bending .................................................. 621
Laser Cutting and Joining of 2D-Reinforced CMC .................................. 627
Analysis of Compounding and Injection Moulding Process of Ceramic Powders .................................................. 631
Use of the SOL-Gel Method in the Extrusion of Alumina Ceramics and ATZ Ceramics .................................................. 637
Advanced Hot-Pressed Ceramic Matrix Composites (CMC) in SiCₓ, SiCₓ C/Si₃N₄ Systems .................................................. 641
High Temperature Si₃N₄-BN Composite .................................................. 647
Processing of SiCN-Fibres Prepared from Polycarbosilazanes .................... 653
Design of Grain Boundary Phases in Silicon Nitride – Silicon Carbide Nano-Composites .................................................. 657
Yb-Si-Al-O-N Glasses and Glass-Ceramics as Grain-Boundary Phases for Silicon Nitride Materials .................................................. 661

Index .................................................. 665
