Conference Record of
The Thirty-Fourth Asilomar
Conference on Signals, Systems &
Computers

October 29-November 1, 2000 Pacific Grove, California

Edited by
Michael B. Matthews, Monterey Bay Aquarium Research Institute

In Cooperation With
The Naval Postgraduate School, Monterey, California
Monterey Bay Aquarium Research Institute
The IEEE Signal Processing Society
# Table of Contents

## Volume 1

### Foreword

xxiii

### MA1b - Synthetic Aperture Radar – I

*Session Chair: Charles Jakowatz, Sandia Laboratories*

<table>
<thead>
<tr>
<th>Title</th>
<th>Authors</th>
</tr>
</thead>
<tbody>
<tr>
<td>An $N^2 \log N$ Back-Projection Algorithm for SAR Image Formation</td>
<td>Shu Xiao, David C. Munson, Jr., Samit Basu, Yoram Bresler</td>
</tr>
<tr>
<td>IFSAR for the Rapid Terrain Visualization Demonstration</td>
<td>Bryan L. Burns, Paul H. Eichel, William H. Hensley, and Theodore J. Kim</td>
</tr>
<tr>
<td>Time-Frequency Signal Analysis Via Transformed Windowed Data Array with Application to 2-D &amp; 3-D High-Resolution Radar Processing</td>
<td>S. Lawrence Marple, Jr.</td>
</tr>
<tr>
<td>The Direction Cosine Method of Scatterer Location Extended to Spotlight Mode IFSAR</td>
<td>Paul H. Eichel</td>
</tr>
</tbody>
</table>

### MA2b - Adaptive Array Processing in the Presence of Motion

*Session Chair: Michael Zatman, MIT Lincoln Laboratory*

<table>
<thead>
<tr>
<th>Title</th>
<th>Authors</th>
</tr>
</thead>
<tbody>
<tr>
<td>The MVDR Beamformer for Circular Arrays</td>
<td>Benjamin Friedlander</td>
</tr>
<tr>
<td>Adaptive Interference Cancellation using Time-Varying Beamforming Weights for Wideband LFM Waveforms</td>
<td>S.D. Hayward, P.D. Baxter, and T.J. Shepherd</td>
</tr>
<tr>
<td>Superresolution Direction Finding with Rotating Arrays</td>
<td>Michael A. Zatman</td>
</tr>
<tr>
<td>High-Resolution Sensor Array Processing in the Presence of Multiple Wideband Chirp Signals</td>
<td>Alex B. Gershman, Moeness G. Amin, Marius Pesavento</td>
</tr>
</tbody>
</table>

### MA3b - Object-Based Image and Video Coding

*Session Chair: Til Aach, Institute for Signal Processing, Medical University of Luebeck*

<table>
<thead>
<tr>
<th>Title</th>
<th>Authors</th>
</tr>
</thead>
<tbody>
<tr>
<td>Face Detection and Tracking for Video Coding Applications</td>
<td>Bernd Menser and Michael Brunig</td>
</tr>
<tr>
<td>MPEG-4 Compliant Video Encoding: Analysis and Rate Control Strategies</td>
<td>Paulo Nunes and Fernando Pereira</td>
</tr>
<tr>
<td>Polygonal Shape Descriptors - An Efficient Solution for Image Retrieval and Object Localization</td>
<td>Andre Kaup and Jorg Heuer</td>
</tr>
<tr>
<td>Segmentation-Based Image Coding by Morphological Local Monotonicity</td>
<td>Joseph Bosworth and Scott T. Acton</td>
</tr>
</tbody>
</table>

### MA4b - DSP Implementations of Programmable Devices

*Session Chair: Ed Deprettere, Leiden University, Netherlands*

<table>
<thead>
<tr>
<th>Title</th>
<th>Authors</th>
</tr>
</thead>
<tbody>
<tr>
<td>An FPGA Based Digital Radar Receiver for Soft Radar</td>
<td>R. Walke, J. Dudley, and D. Sadler</td>
</tr>
<tr>
<td>Architectural Evaluation of Flexible Digital Signal Processing for Wireless Receivers</td>
<td>Ning Zhang and Robert W. Brodersen</td>
</tr>
<tr>
<td>From Basic Concept to Real-Time Implementation: Prototyping WCDMA Downlink Receiver Algorithms - A Case Study</td>
<td>M. Guillaud, A. Burg, L. Mailaender, B. Haller, M. Rupp, and E. Beck</td>
</tr>
</tbody>
</table>
Configurable Arithmetic Arrays with Data-Driven Control

Behrooz Parhami

MA5b - Transmit Diversity Techniques – I

Session Chair: Marc Goldburg, ArrayComm, Inc.

Application of Unitary Transforms to Quasi-Closed-Loop Transmit Diversity Systems

Giridhar D. Mandyam

Performance of Closed Loop Transmit Diversity with Feedback Delay

Balaji Raghothaman, Giridhar D. Mandyam, and R. Thomas Derryberry

Optimal Wideband Transmit Antenna Diversity Utilizing Channel State Information

Eko N. Onggosanusi, Barry D. Van Veen, and Akbar M. Sayeed

Closed-Loop Transmit Diversity for FDD WCDMA Systems

Jyri Hamalainen and Risto Wichman

MA6b - Special Arithmetic Techniques – I

Session Chair: Neil Burgess, Cardiff University

A Novel Area - Efficient Binary Adder

S.B. Furber and J. Liu

Extended Precision Logarithmic Arithmetic

J.N. Coleman and J. Kadlec

Optimised Squaring with Sliding Windows

Braden Phillips and Neil Burgess

MA7b - OFDM – Orthogonal Frequency-Domain Modulation

Session Chair: Robert Wade Lowdermilk, Emergent Signal Processing Solutions

Code Selection to Eliminate Inter-Channel Interference in a Multi-User OFDM Satellite System

Bryan Usevitch

OFDM Parameters Estimation a Time Approach

Walter Akmouche and Eric Kerherve, and Andre Quinquis

Subcarrier Allocation and Power Control for OFDMA

Didem Kivanc and Hui Liu

Efficient Matrix Multiplication Methods to Implement a Near-Optimum Channel Shortening Method for Discrete Multitone Transceivers

Jeffrey Wu, Guner Arslan, and Brian L. Evans

MA8b - Spectral and Hyperspectral Processing and Data Fusion

Session Chair: Randy Roberts, Lawrence Livermore National Laboratory

Stochastic Target Detection for Hyperspectral Data

Lawrence E. Hoff, Scott G. Beaven, Eric Coolbaugh, Edwin M. Winter

Effect of Compression on Detection in Hyperspectral Data

Scott G. Beaven, David Stein, and Steve Stewart

Automatic Normalization of Atmospheric, Environmental, and Sensor Effects in Characterization of Hyperspectral Data Using a Genetic Algorithm

Randy S. Roberts

Requirements for Anomaly Detection in Hyperspectral Data Using Spectral Unmixing

Edwin M. Winter

Analysis of Agricultural Imagery Acquired by the TRWIS III Hyperspectral Sensor

Stephanie R. Sandor-Leahy and Debra Beiso

Target Tracking with an Attentive Foveal Sensor

Laura Li, Douglas Cochran, and Ross Martin
Perceptual Spectrum Quantization ......................................................... 186
   Fredrik Norden and Thomas Eriksson
A Modified Discrete Fourier Transform with a Doubled Frequency Resolution 190
   Ben-Dau Tseng
Approximating the DCT with the Lifting Scheme: Systematic Design and Applications 192
   Jie Liang and Trac D. Tran
Generalized Lapped Biorthogonal Transforms Using Lifting Steps .................. 197
   Masahiro Kawada and Masaaki Ikehara
Handling Nonnegative Constraints in Spectral Estimation .......................... 202
   Brien Alkire and Lieven Vandenberghe
Spectral Analysis of Gapped Data ..................................................... 207
   Erik G. Larsson, Petre Stoica, and Jian Li
Frequency Domain Step-Size Control in Non-Stationary Environments .............. 212
   Julia Vogel, Martin Heckman, and Kristian Kroschel

MP1a - Synthetic Aperture Radar – II

Session Chair: Charles Jakowatz, Sandia National Laboratories
Open-Loop Adaptive Filtering for Speckle Reduction in Synthetic Aperture Radar Images 219
   J.A. Rohwer, N. Magotra, and S. D. Stearns
Modelling SAR Images with a Generalisation of the Rayleigh Distribution ........ 224
   Ercan E. Kuruoglu and Josiane Zerubia
Lossless Compression of SAR Imagery Using a Multiple-Pass Gradient Adaptive Lattice Filter 229
   Robert W. Ives
Analysis of an Adaptive Extrapolation Algorithm on the Recovery of Harmonic Signals 233
   Alejandro E. Brito and Sergio D. Cabrera

MP1b - Synchronization Techniques

Session Chair: fred harris, San Diego State University
MC-CDMA Uplink-Blind Carrier Frequency Offset Estimation ........................ 241
   Ufuk Tureli, Didem Kivanc, and Hui Liu
Multirate Digital Filters Used for Timing Recovery in Digital Receivers .......... 246
   fred harris
Impact of Synchronization on Receiver Performance in Wideband CDMA Networks 252
   Karim Cheikhouhou, Sofiene Affes, and Paul Mermelstein
Analysis of a Timing Control Algorithm for QS-CDMA .............................. 259
   Ronald A. Ilitis
Subspace Based OFDM Carrier Offset Estimation Algorithm in Model Mismatch .... 264
   Ufuk Tureli, Didem Kivanc and Hui Liu

MP2a - Adaptive Array Processing in the Presence of Motion - II

Session Chair: Michael Zatman, MIT
Passive Target Tracking with Uncertain Sensor Positions .......................... 271
   Robert J. Barsanti and Murali Tummala
Convergence Behavior of the Normalized Least Mean Fourth Algorithm .......... 275
   Azzedine Zerguine
Convergence Analysis of the Variable Weight Mixed-Norm LMS-LMF Adaptive Algorithm 279
   Azzedine Zerguine and Tyseer Aboulnasr
Rapid Adaptation in Subspace Leakage Environments via Covariance Matrix Tapering 283
   J.R. Guerci and J.S. Bergin
MP2b - Transmit Diversity Techniques – II

Session Chair: Marc Goldburg, ArrayComm, Inc.
The LEGO Approach for Achieving Max-Min Capacity in Reciprocal Multipoint Networks
Matthew C. Bromberg and Brian G. Agee
Massive Scale Air Interface Reciprocity (Motion) Survey of a PHS Network
Athos Kasapi, Serge Barbosa, Anne-Flore Roger, Adam Kerr and Alissa Nolan
Transmit Diversity for Arrays with Correlated Rayleigh Fading
Cornelius van Rensburg and Benjamin Friedlander

MP3 - Biomedical Processing

Session Chair: Arye Nehorai, University of Illinois at Chicago
Spatial-Temporal Bayesian Inference for MEG/EEG
David M. Schmidt, John S. George, D.M. Ranken, and C.C. Wood
Linearly Constrained Minimum Variance Beamformers, Synthetic Aperture Magnetometry, and MUSIC in MEG Applications
J. Vrba and S. E. Robinson
MEG Multipolar Modeling of Distributed Sources Using RAP-MUSIC
John C. Mosher, Sylvain Baillet, Karim Jerbi, Richard M. Leahy
Estimating Current Density in the Heart Using ECG/MCG Spatio-Temporal Analysis
Aleksandar Jeremic and Arye Nehorai
Image Reconstruction for a Novel Compton Scatter Tomograph
Alfred Hero, Anne Sauve, and Tom Kragh
An Admissible Solution Approach for Diffuse Optical Tomography
D.H. Brooks, R.J. Gaudette, E.L. Miller, and C.A. DiMarzio, D Boas, M. Kilmer
Adaptive Filtering of EKG Signals with Little Apriori Information
Peggy Shen and Claude S. Lindquist
Modeling Directionality of Photoreceptors in the Human Eye as a Function of Monochromatic Aberrations
C. Chao, D.R. Iskander, M.J. Collins, and M. Bennamoun
A Signal Separation Algorithm for Fetal Heart-Rate Estimation
Kuei-Chiang Lai and John J. Shynk

MP4 - Field Programmable DSP Arrays

Session Chair: Chris Dick, Xilinx Corporation
Bit-Width Optimization for Configurable DSP's by Multi-Interval Analysis
A. Benedetti and P. Perona
Implementation of a Reconfigurable Soft Radio Using the Layered Radio Architecture
Srikathyayani Srikanteswara, Jeffrey H. Reed, and Peter M. Athanas
Virtex FPGA Implementation of a Polyphase Filter for Sample Rate Conversion
C.N. Ang, R.H. Turner, T. Courtney, and R. Woods
Perspectives on Custom Computing
Wayne Luk and Henry Styles
FPGA Implementation of Adaptive Heterodyne Filters
Michael A. Soderstrand, Karl E. Nelson, Wen Feng Leong, Hooti Miin Soo, Asad Azam, and Dhinesh Sasidaran
A New RNS Architecture for the Computation of the Scaled 2D-DCT on Field-Programmable Logic
P.G. Fernandez, J. Ramirez, A. Garcia, L. Parrilla, and A. Lloris
Implementation of Canonical and Retimed RNS Architectures for the Orthogonal 1-D DWT over FPL Devices
J. Ramirez and A. Garcia, P.G. Fernandez, L. Parrilla, and A. Lloris
A 64 - Point FFT Design Example Using A/RT-Designer
Markus Rupp
BIG-SKY - A Tool for Mapping Numerically Intensive Computations into Reconfigurable Hardware .......... 394
Robert McIlhenny, Zhijun Huang, Kevin Wong, Aaron Schneider, and Milos D. Ercegovac

MP5 - Application of Invariance in Signal Processing (Special Session)
Session Chair: Mike Clark, Mission Research Corporation
When is a Maximal Invariant Hypothesis Test Better Than the GLRT? ........................................ 401
Hyung Soo Kim and Alfred Hero
ROCKET: A Reduced Order Correlation Kernel Estimation Technique ........................................ 406
Hanna Witzgall, Adam Tarr, J. Scott Goldstein, Michael D. Zoltowski, Irving S. Reed
Capacity of Flat-Fading Channels Associated With a Subspace-Invariant Detector ..................... 411
Keith W. Forsythe
Application of Maximal Invariance to the ACE Detection Problem .......................................... 417
Shawn Kraut and Jeffrey Krolik

MP6a - Special Arithmetic Techniques – II
Session Chair: Neil Burgess, Cardiff University, Wales
A New Pipelined Implementation of the Fast Fourier Transform ............................................ 423
Sungwook Yu and Earl E. Swartzlander, Jr.
Development and Fixed-Point Implementation of a Multiband Dynamic Range Compression (MDRC) Algorithm ................................................................. 428
Neeraj Magotra, Sammati Kamath, Frank Livingston, and Maria Ho
A Constrained Asymmetry LMS Algorithm for PRML Disk Drive Read Channels ..................... 433
Robert B. Staszewski, Khurram Muhammad, and Poras T. Balsara
Computing Haar Transform Using Algebraic Integers .............................................................. 438
Ramin Baghaie and Vassil Dimitrov

MP6b - Subband and Wavelet Filters
Session Chair: Fred Harris, San Diego State University
New Optimization Algorithms for Multirate and Cascaded Filters .................................... 445
James L. Sullivan and John W. Adams
Multirate Filtering and Estimation: The Multirate Wiener Filter ........................................ 450
R. Cristi, D.A. Koupatsiaris, and C. W. Therrien
An Indoor Wireless Channel Model Based on Wavelet Packets ..................................... 455
Hongbing Zhang and H. Howard Fan
Time-Varying Interference Suppression in Communication Systems Using Time-Frequency Signal Transforms ................................................................. 460
Sanjay Chetwani and Antonia Papandreou-Suppappola
Time-Frequency Analysis of Auditory Evoked Potentials Using STFT-Based Adaptive Filters .......... 465
Yuying Song and Claude S. Lindquist

MP7 - PDE’s and Diffusion for Signal Processing (Special Session)
Session Chair: Anthony Yezzi, Georgia Institute of Technology
A PDE Approach to Image Smoothing and Magnification using the Mumford-Shah Functional ............ 473
Andy Tsai, Anthony Yezzi, Jr., Alan S. Willsky
Bridging Nonlinear Diffusion and Multiscale Analyses .......................................................... 478
Yufang Bao and Hamid Krim
On the Relationship Between Parametric and Geometric Active Contours .............................. 483
Chenyang Xu, Anthony Yezzi, Jr., Jerry L. Prince
An Efficient Variational Multiphase Motion for the Mumford-Shah Segmentation Model ............ 490
Tony F. Chan and Luminita A. Vese
Image Segmentation by Curve Evolution with Clustering ......................................................... 495
Nilanjan Tay and Scott T. Acton
MP8a - Space Time Processing

Session Chair: Garret Okamoto, Santa Clara University

An Improved Algorithm for Dynamic Slot Assignment for the SWL System

Garret Okamoto, Amy Slaugherbeck, John O'Boyle, Chih-Wei Chen

Adaptive Modulation for Multiple Antenna Systems

P. Sebastian, H. Sampath, and A. Paulraj

Capacity Study of a LEO Satellite Link with Multiple Antennas User Terminals

Nikolai Lebedev and Jean-Francois Diouris

An Iterative Receiver Algorithm for Space-Time Encoded Signals

Anders Ranheim, Andre P. des Rosiers, and Paul H. Siegel

Spatio-Temporal Array Processing for DS-CDMA Downlink Transmission

Giuseppe Montalbano, Irfan Ghauri, and Dirk T.M. Slock

Space-Time Blind MOE Detection for CDMA Wireless Systems

Zhi Tian, Kristine L. Bell, and Harry L. Van Trees

A Blind and Robust Space-Time Receiver for a Turbo Coded System

Patrik Bohlin and Magnus Lundberg

A Virtual MIMO Framework for Multipath Fading Channels

Ashwin Ganesan and Akbar M. Sayeed

A Novel Technique for Simulating Space-Time Array Data

Gary F. Hatke and Ali F. Yegulalp

A Space-Time Receiver for Asynchronous DS-CDMA Systems Based on Kalman Filter

Kun Wang and Hongya Ge

Turbo Space-Time Equalization of TCM with Receiver Diversity I: Symbol-by-Symbol Detection

Mutlu Koca and Bernard C. Levy

Turbo Space-Time Equalization of TCM with Receiver Diversity II: Maximum-Likelihood Detection

Mutlu Koca and Bernard C. Levy

Iterative Decoding of Space-Time Trellis Codes and Related Implementation Issues

Zhipei Chi, Zhongfeng Wang, and Keshab K. Parhi

Near-Optimal Selection of Transmit Antennas for a MIMO Channel Based on Shannon Capacity

Sumeet Sandhu, Rohit U. Nabar, Dhananjay A. Gore, and Arogyaswami J. Paulraj

Time-Reversal Space-Time Block Coding and Transmit Delay Diversity - Separate and Combined

Erik Lindskog and Dino Flore

Wireless Communication with Coded Modulation and GSC over Rayleigh Fading Channels

Aik Chindapol and James A. Ritzey

MP8b - Network-Based Position Location Techniques

Session Chair: Mark Kahn, University of California, Berkeley

Direction-Of-Arrival Estimation Using Separated Subarrays

Fredrik Athley and Christer Engdahl

Mobile Position Location with the Constrained Bootstrap Filter in a Cellular Communication System

Sangwoo Cho, Haekyung Jwa, Joochew Chun, Jong Heun Lee, and Yoon Seok Jung

Multimode Based Direction Finding

Thomas Svantesson

On the Pulse Shape Filter Estimation in a Multipath Context

Lisa Perros-Meilhac, Eric Moulines, and Pascal Chevalier

Separable Dimension Subspace Method for Joint Signal Frequencies, DOAs and Sensor Mutual Coupling Estimation

Jian Mao, Benoit Champagne, Mairtin O'Droma, and Kevin Kwiat

Feedforward DOA Estimation in CDMA with Uniform Linear Antenna Array Receivers

Davide Bosetto and Gabriella Olmo

A Modified Expectation Maximization Algorithm for Maximum Likelihood Direction-of-Arrival (DOA) Estimation

Yifeng Zhou and Jim P.Y. Lee
Adaptive Acquisition of DOA in Space Time Cochannel TDMA ........................................................................... 618
   Chia - Chang Hu, Irving S. Reed, and Xiaoli Yu
Performance Characterization of External Array Self-Calibration Algorithms Using Experimental Data .... 623
   Gary H. Whipple, Catherine M. Keller, and Keith W. Forsythe
Time Difference of Arrival Estimation of Unequal SNR Denoised Communication Signals ......................... 629
   Spiros Mantis and Ralph Hippenstiel
Transmit Diversity Combining for Fast Fading Vector Channel ..................................................................... 634
   Hang Li, Guanghan Xu, and Chengyang Li

TA1 - Space-Time Adaptive Processing and Sonar
Session Chair: John A. Tague, ONR
Computation Reduction in Space Time Adaptive Processing (STAP) of Radar Signals Using Orthogonal
Wavelet Decompositions ................................................................................................................................. 641
   S. Kadambe and Y. Owechko
Performance Characterization of STAP Algorithms with Mismatched Steering and Clutter Statistics .... 646
   Keith F. McDonald and Rick S. Blum
A Kronecker Product Improvement to PCA for Space Time Adaptive Processing ........................................... 651
   James A. Rice and Aik Chindapol
What is Optimal Processing for Nonstationary Data? ......................................................................................... 656
   David C. Ricks, Paula G. Cifuentes, and J. Scott Goldstein
Stochastic Matched Field Array Processing for Detection and Nulling in Uncertain Ocean Environments .... 662
   Arthur B. Baggeroer and Peter M. Daly
Performance of Sample-Covariance-Based Adaptive Sonar Detectors ............................................................. 668
   Nigel Lee and Nicholas Pulsone
Hermite Functions and Regularized Deconvolution in Sonar Waveform Design and Processing ..................... 673
   James M. Alsup and Harper J. Whitehouse
Experimental Testing of Passive Phase Conjugation for Underwater Acoustic Communication ..................... 680
   Darrell R. Jackson, James A. Ricey, Warren L.J. Fox, Christopher D. Jones, Daniel Rouseff, and David R. Dowling

TA2 - Space-Time Coding
Session Chair: Naofal Al-Dhahir, AT&T Shannon Laboratory
Performance of Space-Time Codes in the Presence of Spatial Fading Correlation ......................................... 687
   Helmut Bolcskei and Arogyaswami J. Paulraj
Capacity Scaling in Dual Antenna Array Wireless Systems .................................................................................. 694
   David Tse, Chen-Nee Chuah, and Joseph M. Kahn
Space-Time Group Codes .................................................................................................................................. 699
   Brian L. Hughes
Finite-Length Channel-Shortening Space-Time Equalizers for MIMO Linear Frequency-Selective
Channels ............................................................................................................................................................. 705
   Naofal Al-Dhahir
Concatenated Space-Time Coding ..................................................................................................................... 710
   Andres Reial and Stephen G. Wilson
Some Unitary Signal Constellations for Differential Space-Time Modulation ................................................. 716
   Xuebin Liang and Xiang-Gen Xia
Frequency Domain Space Time Coding for MIMO FIR Channels ................................................................. 721
   Jonathan H. Manton and Yingbo Hua
Differential Space-Code Modulation for Interference Suppression ................................................................. 725
   Jian Li and Jianhua Liu, and Hongbin Li
TA3 - Smart Antennas for MIMO Links

Session Chair: David Gesbert, Gigabit Wireless, Inc.

MIMO Channel Capacity on a Measured Indoor Radio Channel at 5.8 GHz

Richard Stridh, Bjorn Ottersten, and Peter Karlsson

Multiple-Input Multiple-Output (MIMO) Radio Channel Measurements and Experimental Implementation for EDGE

Carol C. Martin, Jack H. Winters, Hanks H. Zeng, and Nelson R. Sollenberger, and Ashutosh Dixit

Optimal Training in Space-Time Systems

Babak Hassibi and Bertrand Hochwald

Performance Evaluation for Scattering for MIMO Channel Models

D. Gesbert, H. Bolcskei, and D.A. Gore, A.J. Paulraj

A Generalized Space-Time Linear Precoder and Decoder Design using the Weighted MMSE Criterion

H. Sampath, P. Stoica, and A. Paulraj

New Unsupervised Processing Techniques for Wideband Multiple Transmitter / Multiple Receiver Systems

Constantinos Papadistas

MIMO Environmental Capacity Sensitivity

Daniel W. Bliss, Keith W. Forsythe, Alfred O. Hero, and A. Lee Swindlehurst

A Simple Multiplexing Scheme for MIMO Systems Using Multiple Spreading Codes

Sriram Mudulodu and Arogyaswami J. Paulraj

TA4 - Adaptive Filtering Applications and Methods for CDMA

Session Chair: Victor DeBrunner, The University of Oklahoma

A Ramanujan Spherical Code

Victor E. Debrunner and Mohammed Allali

Comparative Performance Evaluation of Three MMSE Equalizers for the CDMA Forward Link in Frequency Selective Multipath

Michael Zoltowski, William J. Hillery, and Thomas P. Krauss

Multicoding and Adaptive Modulation for Uncertain CDMA Channels

Jianjun Ni and Richard J. Barton

Constrained Adaptive Algorithms for Code Acquisition and Interference Cancellation in Asynchronous DS-CDMA Systems

Milos Doroslovacki

A New Scheme for MC-CDMA Systems in the Presence of Imperfections

Tamer A. Kadous and Akbar M. Sayeed

Data - Record-Based Criteria for the Selection of an Auxiliary-Vector Estimator of the MVDR Filter

Haoli Qian and Stella N. Batalama

An Adaptive MMSE Rake Receiver

Subspace Based Blind Detector for Multi-Carrier CDMA with Virtual Carriers over Dispersive Channels

Chengyang Li and Sumit Roy
