Pere Brunet, Chris Hoffmann, Dieter Roller (editors):

CAD-Tools and Algorithms for Product Design

Dagstuhl-Seminar-Report; 227
15.11.1998 - 20.11.1998 (98461)
Contents

Pere Brunet
*Generation of Solid Multiresolution Models* ............................ 4

Martti Mäntylä
*Distributed Design Process Management Infrastructure* ............. 4

Joachim Rix
*Virtual Engineering-The Role of Semantics in CAD-VR Integration* ............................ 5

Antonio Gomes de Sa
*Virtual Prototyping: The Integration of Design and Virtual Reality* .......... 6

Werner Dankwort
*FIORES - An European Project for a New Workflow in Aesthetic Design* ........................................ 7

Ründiger Klein
*Geometric Modelling and Knowledge Representation* ................... 8

Dieter Roller & Dirk Schäfer
*Variational Design in Electrical Engineering* .......................... 8

Ulf Döring & Beat Bruderlin
*Conceptional Modelling with Geometric Constraints, Part I* ........... 9

Paul Michalik & Beat Bruderlin
*Conceptional Modelling with Geometric Constraints, Part II* ........ 10

Chris Hoffmann
*CAD and the Product Master Model* ..................................... 11

Jordan Cox
*Reorganization of Product Development Processes to Facilitate Mass-Customization* ................................. 11

Mervi Ranta
*Collaboration Across Multiple Product Ontologies* .................... 12

Manfred Rosendahl
*Steps Toward a Relational 3D-CAD-System* ............................. 13
Lluis Solano
*A Geometric Relaxation Solver for Parametric Constraint-Based Models* .................................................. 13

Wim Bronsvoort
*Feature-Based Product Design* .................................................. 14

Rafael Bidarra
*Validity Maintenance in Semantic Feature Modeling* ...................... 14

Alexander Noort
*Enhanced Multiple-View Feature Modelling* .................................. 15

David Lutterkort
*Bounding the Distance of Splines from their Control Structure* ........ 16

Fujio Yamaguchi
*What is the Role of an Arithmetic Division Operation in a Geometric Processing System?* ................................. 17

Gerd Podehl
*Similarity Issues - How to Compute Aesthetic Properties* ................. 19

Robert Joan-Arinyo
*A Simple Algorithm for 2D Mesh Generation by Domain Decomposition* .................................................. 20

Guido Brunnett
*Triangulation Based versus Direct Segmentation of Unstructured Point Sets* .................................................. ??

Vadim Shapiro
*Meshless Integration of Geometric Design and Engineering Analysis* .......................................................... 21

Jean-Marc Brun
*A Modeller for Preliminary Design* .................................................. 21

Nick Sapidis
*Planar-Domain Simplification for ‘Void Modeling’* ............................... 22

Alvar Vinacua
*Discrete Surface Extraction with Minimal Wrinkles* .............................. 23
Alberto Paoluzzi
Rapid Development of Building Models ........................................... 24

Umberto Cugini
Feature-Based Assembly for Aeronautics Design ............................. 25

Abdelaziz Bouras
Constructive Methodology for Surface Modelling ........................... 26

Isabel Navazo
Navigation in Highly Polygon- Populated Ship Environments Using the Visibility Octree ................................................................. 27

Graham Jared
Tools for Assembly- Oriented CAD .................................................. 28

Andre Stork
An Algorithm for Fast Picking and Snapping in 3D ......................... 28

Dominique Michelucci
Organ Reconstruction, Dimensioning Prosthesis ........................... 29

Yasushi Yamaguchi
Differential Properties of Parametric Surfaces at Singular Points ...... 30

Monica Borgedoni
The Role of Haptic Devices for an Efficient Integration of Design, Simulation and Analysis ................................................................. 31

Alexa Nawotki
Selective Encoding With Haar Wavelets ......................................... 31

Kevin Wise
Mechanism Analysis Using Multidimensional Set-Theoretic Modelling ... 32
