Geoecology and Computers

Edited by
Sergey A. Yufin
Center of Underground and Special Engineering, Moscow State University of Civil Engineering, Russia
Table of contents

Preface XI
Organization XIII
Welcome addresses XV

Keynote lectures
Hydrological information in environmental impact assessment and other projects 3
C.J. Blasi

Application of discontinuum modeling in geotechnical studies for nuclear waste isolation 15
R.Hart & C.Fairhurst

Numeric methods and method comparison to the ground water modeling of the infiltration of surface water 29
J.Thiel & R.A.Herrmann

Ecological education and modern information systems 35
A.D.Potapov

Application of computer modeling to nuclear waste repository design 39
S.Saeb & C.T.Francke

On the modelling of in-plane interaction of ice and stationary structures: A review 43
A.P.S.Selvadurai

Planning, design and management of future underground space use 57
R.L.Sterling

Modeling the processes of the construction life cycles on the basis of CALS-technologies 61
V.I.Telichenko

Estimation of rock mass boundary conditions using a Bayesian approach – Application to the URL, Canada 67
F.Tonon, B.Amadei & D.M.Frangopol

The tunnels of the highspeed railway line from Cologne to Frankfurt 73
W.Witke

</tbody>
</table>
Back analysis in the interpretation of concrete dam foundation behavior
A.T. Castro & J.V. Lemos

Mathematical modelling of collapse of big volume mountainous landslide masses
A. Chanturia, N. Jgamadze, H. Meladze & N. Skhirtladze

Three dimensional hexahedron mesh generation for rock engineering
S.H. Chen & S.F. Chen

On the influence of strain softening in the numerical analysis of geotechnical problems
A. Cividini, G. Gioda & D. Sterpi

Modeling of rock debris sliding down a slope
B. Didoukh & V. Dolgouchine

Computer modeling of structurally heterogeneous hard rock in geomechanics
V.A. Dunaev, S.N. Zhurin & S.S. Sery

Some experiments in 3D numerical limit analysis (NLA)
A. F. Durand, E.A. Vargas Jr & L. E. Vaz

Computer version of FEM for design of pile structures in soils
Ya.A. Eyyubov, A.A. Ali-zade & M.B. Akhundov

Seepage forces in geotechnical calculations
A. Fadeev & V. Paramonov

Database ‘Information card’ for analogues of railway embankments
Y. K. Frolovsky & A.A. Zaitcev

Solving problems of stressed states of a mass having block structure
L. N. Gakhova

Express evaluation of slope stability for landslide-hazard zoning
E. Gaziev & V. Levchouk

Computerized method of CPT data processing for a raft foundation calculation
B. V. Goncharov, G. V. Kogan & Sh. R. Nezamutdinov

Calculation of combined effect of vertical and lateral loads of piles with a variable section
by a finite element method
A. L. Gotman

The spatial contact problem concerning punch in a hollow
S.V. Ikonin & M.S. Kim

Integrated software for numerical modeling of geomechanical problems
I.M. Iofis & A.V. Maksimov

Software packages for automation of environmental monitoring and experimental data
processing

Classifying rock masses using artificial neural networks
A.G. Karlaftis
A model of system with random parameters for dynamic soil-structure interaction
M.L. Kholmyansky

Solution of the permafrost engineering problems with use of computer technologies
L.N. Khrustalev, G.P. Pustovoit, L.V. Emelianova & N.V. Emelianov

Computer simulation for geotechnical engineering
V.L. Konyukh & V. Sinoviev

Refined methods of analysis of complicated foundation plates with varying thickness
E.B. Koreneva

Numerical modelling of soft soils using the Modified Cam-Clay and Melanie models
L.J.L. Lemos, P.J.V. Oliveira & P.A.L. F. Coelho

Informational support system for diagnosis and prediction of dam's behaviour
V. Levchouk, J. Alberro & E. Gaziev

Application of the modified Cam-Clay model to a residual soil
P.C. Lodi, S.L. Machado & O. M. Vilar

Prediction of the settlement of the railway dam at the tunnel construction
A. Malinin

Computerized calculation of pile load capacity and the geological sections plotting
G.V. Mitkina & Y.M. Shemenkov

Use of numerical modeling in retaining wall design
A. Modaressi & K.C. Vossoughi

A random model for rock joint normal stiffness
J. Muralha

Methodology of an adequate choice of input parameters for a 3-D geomechanical model
L.A. Nazarova

A simplified method of operations with the random values in the geotechnical problems
I.B. Ryzhkov

Applicability of 'COSMOS/M' program complex for soil basement computation
K. Sh. Shadunts, A.V. Deryabin & A.V. Letyagin

Record-keeping automatization of foundations footings failures
V.G. Simagin, E.I. Ratkova, A.A. Rogov & D.P. Kositcin

Numerical modelling in geotechnical practice
V. Ulitski, A. Shashkin & V.N. Paramonov

Simplified subsoil models in solution of combined subsoil-superstructure calculation problems
V. Ulitski, A. Shashkin & K. Shashkin

Object-oriented approach in programming of finite element method
A.N. Vlasov, M.G. Mnushkin & Yu.G. Yanovsky

The program for slope stability analysis by engineering methods
A.N. Vlasov & M.G. Mnushkin
AE signal computer processing at the gas storage cavern development
A.S. Voznesensky & Yu.V. Demtchishin

The mathematical modelling of mechanical properties of joints in the rock mass by means of a special contact element
M.G. Zertsalov & D.S. Konyukhov

Dynamic problems

Change of dynamic properties of piles with accumulated damage
A.A. Ali-zade & M.B. Akhundov

Numerical modelling of ‘Dam-Foundation-Reservoir’ system for earthquakes
V.I. Bronshtein & M.E. Groshev

The fast dynamic prediction of excavation engineering
H. Huang, J. Yang, N. Yang & Z. Xiong

Features of AE kinetics simulation in cyclically loaded rocks
A.V. Lavrov

Applying of a super cell method for the spatial underground structures dynamic calculation
A.V. Peskov & A.A. Kornev

Simulation of reinforced brick structures at seismic excitation
V.I. Prokopiev & U. Fahritdinov

Application of wave equation for interpretation of dynamic penetration tests
I.E. Shkolnikov

Mining applications

Application of the discrete element method in the research of the surface movement induced by underground mining
D. Feng, W. Chen & X. Ge

The Eurasia lithospheric plate horizontal tectonic stresses modelling
A.A. Kozyrev & S.N. Savchenko

Analysis of subsidence behaviour using discontinuum models for underground coal excavations
S. Naik, R. Venugopala Rao & R. N. Gupta

Mine engineering monitoring at Kuzbass coal mines
V.P. Potapov, V.A. Fedorin & B.V. Vlasenko

Novel approach to optimise the dimensions of pillars in underground hard rock mine

Mine surveying-geomechanical information system
V.M. Shick & O.G. Bykova

Computer modeling of rock mass state at geomechanic monitoring
B.V. Vlasenko, V.E. Anufriev & V.D. Jalevsky
Hydrology, hydrogeology and groundwater

Monitoring of hydrological parameters and their use in environmental protection
C.J. Blasi

A finite element numerical analysis for a fluid-solid coupling flow in a deforming porous medium
P. Dong, S. He & Z. Lang

DATAN – An MS Excel based tool for estimating design values in hydrology
J. Jensen, T. Frank & D. Wisser

Optimisation of the Chemoga-Yeda-Sens hydropower scheme, Ethiopia
C. Jokiel & R. Walker

Contaminant transport modeling in multi-porosity fractured systems using a multi-continuum approach
V.R. Lagendijk, T. Vogel, J. Köngeter & D. Jansen

Large scale groundwater modelling and calibration
T. Manskopf, A. Braxein & T. von Schwarzenberg

On mathematical modelling and numerical resolution of pollution diffusing in rivers
H.V. Meladze, E.D. Gordeziani & F.C. Torralba

Dam safety assessment using long-term hydrological modelling techniques
M.W. Ostrowski & H. Lohr

Use of computer models as an aid to decision-making for the rehabilitation of old waste deposits with the permeable-wall technology
Ch. Priesemann & Th. Priesemann

FE approach to coupled transient flow and stability analysis of antiflood embankments
A. Urbanski & M. Grodecki

Simulating unsaturated flow using the multi-continuum approach
T. Vogel, V.R. Lagendijk & J. Köngeter
