Simulation of Materials Processing
Theory, Methods and Applications

Edited by
Ken-ichiro Mori
Toyohashi University of Technology, Japan
Table of contents

Preface XIX
Organisation XXI

Keynotes

Recent developments in sheet metal forming simulation 3
A.Makinouchi

Stability analysis of viscoelastic polymer melt flows 11
F.P.T.Baaijens, A.M.Grillet, A.C.B.Bogaerds & G.W.M.Peters

Recent numerical issues in finite element modeling of metal forming processes 17
J.-L. Chenot

Use of CAD/CAE in the CASE activities 27
Y.Yano & T.Akashi

On the way from a simple FE-Model to a virtual reality 35
P.Hora

Numerical simulation of lubricated contact between solids in metal forming processes 45
using the arbitrary Lagrangian Eulerian formulation
R.Boman & J.-P.Ponthot

Progress of finite element simulation for Rolling Processes 55
T.Kikuma & K.Yamada

Numerical methods

Convergence properties of an Eulerian elastoviscoplastic problem solved directly from 67
a system of first order equations
T.F.Stanistreet & J.M.Allwood

The successive preconditioned conjugate gradient method for efficient metal forming 73
computation
K.Davey & M.J.Ward

Large deformation applications using dynamic ALE formulation 79
M.S.Gadala & H.N.Bayoumi
Axisymmetrical metal forming analysis with rigid-plastic/rigid-viscoplastic FEM based on linear programming

An improved friction description and its application to simulation of multibody contact
H.L. Xing & A. Makinouchi

A modified barrier approach to contact problems
G. Kloosterman, A.H. van den Boogaard & J. Huétink

Forging process simulation incorporating strain-induced phase transformation by the finite volume method
P. Ding, T. Inoue, S. Imatani, D. Y. Ju & E. de Vries

On the effect of triaxial and bilateral pressure on unstable behaviors of a bar under uniaxial tension
M. Gotoh

Improvement of streamline integration in steady state flow analysis of two-dimensional and axisymmetric forming processes
S. Toyoshima & M. Gotoh

A new displacement based formulation for steady state problems
Y. Yu, H. J. M. Geijselaers & J. Huétink

Application of finite element method to process optimal design in non-isothermal steady-state metal forming
S. M. Byon & S. M. Hwang

Direct differentiation and adjoint state methods for shape optimization of non-steady forming processes

CAOT-A computer aided optimization tool applied on metal forming processes
S. Posielek & R. Kopp

Development of one point quadrature shell element for large deformation considering elasto-plastic material modeling
R. P. R. Cardoso, J. W. Yoon, J. J. Grácio, F. Barlat & J. M. A. César de Sá

Automated numerical simulation of metal forming using low-order triangular and tetrahedral elements
C. H. Liu & S. Choudhry

Techniques for the analysis of metalworking processes using enhanced-strain elements
J. M. A. César de Sá, P. M. A. Areias, R. M. Natal Jorge & R. A. F. Valente

Geometry defeaturing and surface relaxation algorithms for all-hexahedral remeshing
C. Karadogan & A. E. Tekkaya

Simplified FEM simulation of curl distortion in stereolithography with scanning laser beam
H. Iseki
An efficient algorithm for parallel stiffness matrix assembling on shared memory machines
A.Unterkircher, P.Berkes & J.Reissner

Parallel processing of rigid-plastic FEM on PC cluster
Y.Miyakawa, A.Matsuda & T.Kato

Acceleration of finite element analysis by PC cluster with broadcast and multi-thread
A.Matsuda, Y.Miyakawa, M.Ichikawa & T.Kato

Micro mechanics and material models

Texture design of high-strength and high-formability steel sheet by using finite element and optimization method
E.Nakamachi & C.L.Xie

The effects of latent hardening on the shear band formation with 3D FCC single crystal model
J.Nitta, K.Ito, S.Kanno & T.Sagawa

Implementation of a texture based interpolated yield locus in FEM code
L.Duchêne, A.M.Habraken & A.Godinas

Texture and microstructure-induced anisotropy: micro-macro modelling & implementation
E.Hoferlin, S.Li, A.Van Bael & P.Van Houtte

Earing behavior of fcc metals in cup drawing: FE simulations using a texture-based strain rate potential
S.Li, E.Hoferlin, A.Van Bael & P.Van Houtte

Physically based material model in sheet metal forming
K.Domkin, L.-E.Lindgren & L.Troive

Experiments and numerical simulations based on a micro-macroscale model for the solid sintering of metallic powders
D.Renault, T.Barriere & J.C.Gelin

3D simulations of sintering and grain growth by the Monte Carlo method
M.Shimizu, H.Nomura, H.Matsubara & K.Mori

Finite element simulation of sintering of powder compact using shrinkage curve obtained by Monte Carlo method
K.Mori, H.Matsubara & M.Umeda

Modelling of microstructure evolution during hot roll forging process using FEM program MARC
Y.Dai & W.Lehnert

Numerical prediction of grain size distribution for hot forging processes
M.Yoshino, M.Futamura & T.Shiraishi

Numerical and experimental simulation for predicting microstructure of forged metals
S.Kubota, M.Yamaguchi, A.Nakama, T.Ohno & T.Fukui
Prediction of microstructural evolution and recrystallization behaviors of die steel

J.R. Cho, H.S. Jeong, D.J. Cha, W.B. Bae, P. Hartley & I. Pillinger

Comparison of numerical results with experimental results on flow stress and microstructural evolution of super alloy 718

M. Kawano & S. Isogawa

Mathematical modelling of hot rolling of steel strip with microstructure analysis

M. Miyake, J.J. M. Too & I. V. Samarakasekera

Inverse analysis for identification of parameters during thermo-mechanical tests

B. Boyer & E. Massoni

Sensitivity of the finite element simulation of metal forming processes on contribution of history of hot deformation to the constitutive law for steels

M. Pietrzyk, B. Glut, V.T. Pidvysotskyy, D. Svietchichnyj & D. Szyndler

The parameter identification of superplastic constitutive model

Q. Jin & H. Wu

Identification of parameters in the internal variable constitutive model and friction model for hot forming of steels

D. Szyndler, M. Pietrzyk & P.D. Hodgson

A fuzzy model for prediction of material flow-stress in metal forming

M.A. Hassan, K. Yamaguchi & N. Takakura

Polymer processing

Annular liquid jets at high Reynolds numbers

G. Georgiou

Calculation of a time-dependent Bingham-type flow using marker FEM

O. Tanaka & Y. Shimazaki

Numerical simulation method for fracture of fibers in injection molded composites

T. Nomura, S. Yamamoto & T. Matsuoka

A new explicit algorithm for the finite element simulation of fluid-particle flows in metal injection molding

T. Barriere, J.C. Gelin & B.S. Liu

Comprehensive modeling of the glass container forming process

M. Hyre & Y. Rubin

Development of FE simulation code for stereolithography of resin cured by v.v. ray

S. Kuriyama, Y. Xu & T. Nakagawa

Bulk forming

Defect analysis in forging operations: a two dimensional application

E. Ceretti, C. Giardini, G. Maccarini & A. Bugini
Application of adaptive damage theory for optimisation of cold bulk metal forming
N.V.Biba, S.A.Stebounov & S.V.Smirnov

Improvement of the deformability of metals via superimposed hydrostatic pressure:
Modelling of hydrostatic upsetting
J.M.Jamet, W.Rasp & O.Pawelski

Quality of simulation packages for flashless hot forging operations
H.C.Altmann & W.J.Slagter

FEM simulation study for forging metals with high and low thermal conductivity by
differential heating
S.Q.Lu, M.Hua & T.X.Yu

Preform design for the 3D forging by the sensitivity method
H.B.Shim & H.C.Noh

Simulating a sequence of manufacturing steps
S. Hyun

Deformation modeling applications in the aircraft engine industry
R.S.Minisandram & S.K.Srivatsa

Numerical modeling of induction heating processes with automatic optimization of
process parameters
F.Bay, Y.Favennec, V.Labbe & J.Chenot

Simulation of steady state laser hardening
H.J.M.Geijsgelaers, Y.Yu & J.Huetink

Optimal heat treatment process design in manufacturing
Z.Li & R.V.Grandhi & R.Shivpuri

The effect of convective heat transfer coefficient on the residual stresses after cooling
from solution heat treatment
J.P.Astrom & M.O. Ndsstrom

Prediction of stochastical failure characteristics of cold forging tool systems
R.Voelkl & B.Falk

Numerical analysis of abrasive wear of forging dies
A.Kocanda & P.Czyzewski

Local approach applied to fatigue crack initiation and growth in cold forging tools
K.Hayakawa, T.Nakamura & S.Tanaka

Extrusion and drawing

Finite element prediction of deformation-induced anisotropy in profile extrusion
of aluminum alloy
C.H.Lee, D.Y.Yang & F.Barlat

Finite element analysis of a non-isothermal sheet metal extrusion process
Influence of eccentricity of punch on metal flow in backward extrusion
N.Yukawa, Y.Yoshida, T.Kobayashi & T.Ishikawa

A step towards the design of feeder plates for extrusion dies

Analysis of wire breaks during drawing of fine wire with an inclusion by FEM
K.Yoshida & T.Imai

Three-dimensional elasto-plastic finite element analysis of drawing direction angle in die-wire drawing
A.Nakagiri, S.Yamamoto & Y.Okazaki

Finite-element simulation of ultrasonic wire drawing process
M.Jin, S.Thipprakmas, H.Noguchi, M.Hayashi & M.Murakawa

A numerical study on residual stresses in drawn wires
S.He, A.Van Bael, P.Van Houtte, F.Mil, W.Decleyre & A.Sarban

Rolling

Numerical simulation system for deformation analysis of plate rolling process using rigid-plastic finite element method
T.Higo, K.Yamada & T.Hisatsune

Three-dimensional numerical simulation system for hot plate rolling process
Y.Hayashida, Y.Maeda, A.Kitamura, N.Okada, T.Yamano & K.Ooe

3-D finite element modelling of the strip rolling with friction variation
Z.Y.Jiang, A.K.Tieu & C.Lu

Flatness and residual stresses during and after rolling
O.Wiklund, A.Nilsson & P.Sidestam

Analysis of the elastic deformation regions in strip rolling
A.K.Tieu, Z.Y.Jiang & C.Lu

A hybrid 2.5 dimensional elastoviscoplastic model of hot strip rolling for practical applications
J.M.Allwood

Three-dimensional model of strip cold rolling from steel feed with wedge cross-section
A.Pesin, V.Salganik, P.Smirnov, G.Kunitsin & E.Trahtengertz

Derivation of an on-line model for the prediction of roll force and roll power in hot strip rolling by FEM

A new computing algorithm in rigid plastic FEM for rolling process
C.Lu, A.K.Tieu & Z.Y.Jiang

Simulation of multi-pass rolling processes
B.Engelmann, M.Schrank, W.Grimes & D.Farrugia

</table>
Application of tri-linear and tri-quadratic 3-D solid finite elements in sheet metal forming process simulations
J.L.Alves & L.F.Menezes

Five-node shell element for transition region from a fine to a coarse mesh
M.Ichishima & Y.Yokouchi

3D modelling of sheet forming operations and prediction of forming limits
R.Knockaert, E.Massoni & Y.Chastel

FE simulation of sheet metal forming using LS-DYNA3D based on the damage coupled plastic mixed kinematic-isotropic hardening model
C.L.Chow, X.J.Yang & E.Chu

Application of ductile fracture criterion to forming limit prediction of sheet metals
H.Takuda & K.Mori

Evaluation and comparison of surface defects on a simplified model for the area around the fuel filler lid by simulation and experiments
A.Andersson & J.Hertzman

Effect of binder force trajectories on stamping performance of an aluminum rail
M.Y.Demeri, M.Lou & W.Wang

Numerical procedures for 2D drawbead simulation
K.Mattiasson & M.Larsson

Springback analysis in sheet metal forming with an anisotropic micro-macro hardening model
E.Brasseur, E.Hoferlin & O.Moriau

Numerical prediction of spring-back behavior of a stamped metal sheet by considering material nonlinearity during unloading
N.Iwata, M.Matsui, T.Kato, K.Kaneko, H.Tsutamori, N.Suzuki & M.Gotoh

Springback simulation by the static explicit FEM code, using a new algorithm for canceling the non-equilibrated forces
N.Yamamura, T.Kuwabara, A.Makinouchi & C.Teodosiu

A new four-node shell element with enhanced bending performance for springback analysis with explicit FEM
D.-W. Park & S.-I.Oh

A parametric study of springback behavior
Z.C.Xia,

Springback evaluation after forming simulation using the inverse approach and incremental approach
Y.Q.Guo, W.Gati, H.Naceur & J.L.Batoz

Optimal process design of sheet metal forming for minimum springback using an evolutionary algorithm
H.Tan, K.M.Liew, T.Ray & M.J.Tan

Numerical investigation of tailor welded blank forming and springback
J.K.Lee, B.K.Chun & H.Y.Kim
Bi-directional springback analysis using the strip drawing process with an elliptical tool
S.W.Lee & D.Y.Yang

CAE approach for springback prediction and compensation in sheet metal forming
W.Wang & M.Lou

FE simulation database assisted AI control system for practical V-bending process
M.Yang, K.Manabe & J.Koyama

Knowledge based optimisation techniques for sheet metal forming die design
A.Scott-Murphy, M.Cardew-Hall, S.Kalyanasundaram & P.Hodgson

Simulation of wrinkling initiation and growth of sheet metal forming processes by using global-local zone analysis
T.J.Kim, D.Y.Yang & J.B.Kim

A numerical procedure based on the deep drawing simplified inverse approach to optimize material properties of thin sheets

A ductile damage model for deepdrawing process
J.P.Fan, C.Y.Tang & T.C.Lee

Finite element simulation of deep drawing of titanium sheet having high normal anisotropy
K.Mori & K.Katoh

Cup drawing of pure titanium sheet – finite element analysis and experimental validation –
T.Kuwabara, C.Katami, M.Kikuchi, T.Shindo & T.Ohwue

Finite element simulation of redrawing process of cup without blankholder
T.Murao, K.Mori, A.Takagi & H.Okubo

FEM simulation of drawing of tailored blanks
A.Piela, Kocauda & Z.Zimniak

Research on the non-uniform deformation of deep drawing tailor-welded square boxes

Thermo-coupled solid element formulation using integral visco-elastic model and application to sheet forming simulation
S.Kihara & H.Ishida

3-Dimensional finite element analysis of non-isothermal forming processes for non-ferrous sheets
Y.T.Keum, B.Y.Ghoo & R.H.Wagoner

Aluminum sheet forming at elevated temperatures
A.H.van den Boogaard, P.J.Bolt & R.J.Werkhoven

Effect of temperature increase during plastic deformation on ferromagnetic property of composite magnetic material
S.Sugiyama, S.Takenouchi, T.Ishikawa, K.Nakanishi & F.Okubo
Finite element modeling of superplastic bulge forming with material parameters of multi-dome test
A.EI-Morsy, N.Akkus, K.Manabe & H.Nishimura

Modelling and validation of the superplastic forming of dental prostheses

Finite element simulation of thermoforming process of reinforced composite fabric tubes
K.Manabe & J.Ozaki

Analysis of necking and bursting in sheet forming and tube hydroforming. Influence of material properties and process conditions
N.Boudeau, J.C.Gelin & A.Lejeune

Finite element evaluation of tube hydroforming performances by a tapered box forming test
K.Manabe & S.Miyamoto

Effect of the strain path in tube forming on a forming limit
K.Sato, I.Hiroshige, K.Ito & K.Shibata

Analysis of forming limit in tube hydroforming process
S.T.Kim, Y.C.Cho & Y.S.Kim

Finite element analysis of hydroforming process for sheet metal pairs
Y.C.Chang, L.P.Lei & B.S.Kang

FE simulations on tube hydroforming in square and rectangular dies
Y.M.Hwang & T.Altan

Analysis and design of hydroforming process for automobile lower arm by FEM
J.Kim, Y.C.Chang, L.P.Lei & B.S.Kang

Finite element analysis of tube hydroforming using static explicit method
T.Hama, M.Asakawa, H.L.Xing & A.Makinouchi

Numerical design and optimal control of sheet forming and tube hydroforming processes
J.C.Gelin & C.Labergere

Three dimensional finite element simulation of asymmetric bulge forming operations
B.J.Mac Donald

Simulation of multi-stage tube hydroforming and optimization of forming conditions
N.Ma, N.Sugitomo, T.Noguchi & T.Kano

Optimization of forming conditions in a spinning draw process by using numerical simulations
K.Terada, S.Takahashi & N.Taguchi

Analysis of diameter growth in tube spinning

Simplified three-dimensional finite element simulation of tube spinning
O.Ebihara, K.Mori & K.Akaishi
Simulation of hemming with different element formulations and time integration methods

*M.Svensson & K.Mattiasson*

Numerical simulation of the relaxation of aluminum alloy AA 5182 after sheet forming

*L.Zhu, A.J.Beaudoin & S.R.MacEwen*

Crush of axially impacted automotive strengthening members of hollow tubular structure

*M.Gotoh, M.Yamashita & Y.Sawairi*

Effect of forming on the crashworthiness of hydroformed member

*K.Ogawa, N.Ogasawara, Q.Yu & M.Shiratori, K.Suzuki & A.Yoshitake*

**Shearing and cutting**

Deformation analysis of the shearing process considering the fracture

*Y.Yoshida, N.Yukawa & T.Ishikawa*

Simulation of shearing of bars: effect of ductile fracture criterion

*K.Komori*

Numerical and experimental analysis of fine-edge blanking operations

*L.Filice, F.Micari & L.Fratini*

Three-dimensional finite-element simulation of fine blanking

*M.Murakawa, M.Jin & S.Thipprakmas*

Explicit/implicit integration scheme of material flow simulation in metal cutting

*K.Manabe & M.Nishio*

Thermo mechanical model for orthogonal metal cutting

*M.R.Madrigal, J.B.de Aguiar & G.F.Batalha*

Finite element simulation of machining process with mesh adaptation

*T.El-Wardany, D.Viens, G.C.Huang & J.Dierberger*

Modeling of sheet metal cutting by coupling damage and crack propagation theories

*P.O.Bouchard, F.Bay, J.L.Chenot & O.Hudin*

Effect of previous cutting on chip formation

*V.Kalhori*

Tool-path optimization in two-dimensional machining with constraints

*K.P.Rao & L.S.Ma*

**Powder forming**

Effect of tool kinematics on density distribution of multi-stepped part by die-compaction of powder

*S.Shima, H.Kotera & Y.Yamamoto*
Numerical simulation of powder transfer and compaction based on continuum model  
W.M. Shen, T. Kimura, K. Takita & K. Hosono

Failure and localization in powder forming processes  
A.R. Khoei

Forging analysis of sintered powder compacts  
C.-C. Huang & J.-H. Cheng

Simulation of hot forming processes of sintered refractory metals using porous metal plasticity models  
E. Parteder, F. Andrieux, H. Riedel & D.-Z. Sun

Finite element simulation of firing process of glass foam products  
K. Shinagawa

Two-dimensional finite element simulation of laser rapid prototyping  
M. Shiomi, M. Matsumoto, K. Osakada & F. Abe

Casting

Eulerian and lagrangian control volume capacitance methods for coupled solidification and deformation modelling  
K. Davey & N. J. Rodriguez

Thermal control of high pressure die casting using computational fluid dynamics  
L. X. Kong & W. M. Gao

Comparison of single-phase and two-phase flow for numerical analysis of semi-solid forming process  
C. G. Kang & Y. J. Chung

Determination of the constitutive equation parameters of a thixotropic Al alloy and FEM modelling of the thixoforming process  
M. Bellet & S. M. Mpong

Welding

Finite element modeling of inertia welding processes  
K. Lee, A. Samant, W. T. Wu & S. Srivatsa

Finite element modelling of the inertia friction welding process  
L. D'Alvise, E. Massoni & S. J. Walløe

Optimization of shape of workpieces for net shape forming using pressure welding by finite element simulation  
S. Maki, Y. Harada & K. Mori

Current state of welding simulations  
L. E. Lindgren
Three-dimensional finite element simulation of laser welded stainless steel plate
D.Berglund, L.-E.Lindgren & A.Lundbäck

Optimising the contact shape in case of metal ceramic joined parts
O. Klementis, B.G.Lenkey, M.Tisza, S.Nagasawa & Y.Fukazawa

Author index
