RANDOL GOLD & SILVER FORUM 2000

Conference & Exhibition

April 25-28, 2000
Hotel Vancouver
Vancouver, B.C.

Randol International Ltd.
21578 Mountsfield Drive
Golden, Colorado 80401 USA
Phone: (303) 526-1626; Fax (303) 526-1650
Web site: www.randol.com
E-mail: hansvon@attglobal.net
# Table of Contents

## The Best New Generation Breakthrough Technologies

- Ron Parks, Manager of Minerals, North American Division, Krupp Polysius Corporation
  - An improved look at high pressure grinding for the gold industry ......................................................... 15
- Rein Buisman, Particle Separation Systems (Pty) Ltd. and Michael Fullam, Knelson Concentrators
  - A novel fine screening device — the Pansep screen .................................................................................. 19
- John C. Schneider, Hydrochem Developments Ltd.
  - Hydrochem agitated flotation column ........................................................................................................ 23
- Gregory Owen Lewis and Wendy Bouwer, MINTEK
  - Resin-in-leach: an effective option for gold recovery from carbonaceous ores ...................................... 35
- J.M. Tranquilla, EMR Microwave Technology Corporation
  - Microwave applications for ore treatment
  - Case study: treatment of a carbonaceous refractory gold ore ................................................................. 45
- T. Mulpeter and O. Guyot, AngloGold (Semos SA) Corporate Metallurgy
  - Design and Implementation of an on-line optimizing control system for processing the Sadiola Hill oxidized gold ore ................................................................. 51
- Ian Ewart, Consultant and Tony Treasure, Managing Director, Electrometals Technologies Ltd.
  - The EMEW® Cell — an alternative to Merrill Crowe ............................................................................. 67

## André R. Laplante Gravity Workshop

- André R. Laplante, Department of Mining & Metallurgical Engineering, McGill University
  - Testing requirements and insight for gravity gold circuit design ............................................................ 73
- P. Bundo, Plant Manager Eureka Mine, Delta Gold Zimbabwe (Pvt) Ltd. and
  - P. Simpson, Director, Peacocke, Simpson & Associates (Pvt) Ltd.
  - Eureka Mine — Development and implementation of a novel gravity/heap leach process ....................... 85
- W. Lethlean, Chief Metallurgical Engineer, AngloGold Australasia and
  - Laurie Smith, Principal, Laurie Smith and Associates
  - Leaching gravity concentrates using the ACACIA reactor ........................................................................ 93
- D. Erik Spiller, Senior Consultant, Raytheon Engineers & Constructors
  - A commercialized dry gravity concentrator for gold applications .......................................................... 101
- André Laplante, Associate Professor, McGill University, Department of Mining and Metallurgical Engineering
  - Ten do's and don'ts of gold gravity recovery ............................................................................................ 107
- Dan Mackie, P. Eng., President, INNOVAT Limited
  - Advances in continuous vat leaching technology ..................................................................................... 119
HEAP, DUMP & VAT LEACHING ................................................................. 123

Daniel W. Kappes, President, Kappes, Cassidy and Associates  
Observations on recent successes and problems in heap leaching ......................................................... 125

Tom Barrett, Mike Sierakowski and Jennifer Waddell, 3M Specialty Materials Lab; and Shawn Orser, Daisy Gold  
Evaluations of 3M Fluorad™ FC-GOLD on gold extraction from production heap leaching  
at Glamis Daisy Gold Mine (Glamis Gold) ................................................................................. 129

John Frostiak, Project Process Manager, Barrick Pierina; Kenneth G. Thomas, Senior Vice President, Technical Services, Barrick Gold Corporation; Igor Gonzales, Vice President and General Manager, Minera Barrick Misquichilca S.A.; and Ken Manning, Manager Special Projects, Barrick Gold Corporation  
The Pierina project: leaching of high-grade ore .................................................................................. 135

REFRACTORY GOLD & SILVER ORE PROCESSING .................................................. 155

Vanessa M. Torres, Cia Vale do Rio Doce; Arthur P. Chaves, Universidade de São Paulo;  
and John A. Meech, University of British Columbia  
Process selection for refractory gold ores using an expert system approach ........................................ 157

Gordon V. Lewis, Director, Avocet Gold Ltd.  
The Penjom Process: An innovative approach to extracting gold from carbonaceous ore .................. 163

Tony Pinches, John W. Neale and Vishal Deeplaul, Mintek; Paul Miller and Mike Rhodes,  
BacTech (Australia) Pty Ltd.; and Barrie Hancock, Beaconsfield Mine Joint Venture  
The Beaconsfield bacterial oxidation gold plant .................................................................................. 169

Mike Schaffner, Echo Bay Mines and Pieter Van Aswegen, Gold Fields Ltd.  
The integrated tank/heap bio-oxidation process .................................................................................. 177

Scott W. Beckman, Ph.D., Science Applications International Corporation;  
Leslie C. Thompson, Pintail Systems, Inc.; and Joseph A. Kizis, Jr., Fairmile Gold Corporation  
The BioLix Process: The biological alternative to cyanide .................................................................. 183

H.J. Marais and J.A. van Niekerk, Gold Fields Limited  
The ASTER™ process for the destruction of CN⁻ and SCN⁻ ............................................................ 189
**AUTOCLAVE OXIDATION**.................................195

T.S. Giraudo, Principal Process Engineer, Minproc; M.D. Cadzow, Mill Manager, Macraes Mining; D.J. Lunt, Technical Director, Minproc; and T.W. Quaife, Engineering Manager, Minproc

*Design and commissioning of the Macraes pressure oxidation circuit* .................................................197

Ir HJH Pieterse, Pieterse Consulting Inc.

*Autoclave Operating Economics* ...........................................207

Gus Van Weert, President, ORETOME Limited and Roy van Lier, Senior Process Metallurgist, Paques Bio Systems BV

*Modifying pressure oxidation to enhance silver leach recoveries* ..................................................215

Jerry Kolstad, Metallurgist, Stillwater Mining Company

*Batch autoclave operation & costs* .....................................221

David Green, President, Outokumpu Technology Inc.

*Benefits of increasing feed pulp density ahead of pressure oxidation* ..............................................225

Gary L. Simmons, Director Metallurgy & Technology, Newmont Mining Corporation and John C. Gathje, Newmont Metallurgical Services

*Au, Cl~, C(org) reactions in acidic pressure oxidation of sulfuric carbonaceous gold ores* ..................231

C.J. Ferron and C.A. Fleming, Lakefield Research Ltd; David B. Dreisinger, University of British Columbia; and P. Terry O’Kane, O’Kane Consultants, Inc.

*One-step leaching of gold, PGM’s and base metals from various ores and concentrates* ..................243

John G. Banker, President, CLAD Metal Products, Inc.

*Titanium clad autoclave performance in nickel laterite hydrometallurgy* ........................................253

Wayde Esplin, Reliability Maintenance Coordinator, Barrick Goldstrike Mines, Inc.

*Exploring the potential of reliability centered maintenance at Barrick Goldstrike* ..................................261

Harrie van Dijk, GEHO PUMPS

*Handling of high temperature laterite nickel slurry* .............................................................................267

**RECOVERY OF GOLD & SILVER - LEACHING** ..........................................................269

Stephan Gos and Andreas Rubo, Degussa-Hüls AG

*Alternative lixivants for gold leaching — a comparison* ..........................................................271

Steve Scherrer, Great Lakes Chemical Corporation

*Precious metal extraction chemicals from Great Lakes Chemical Corporation* ..................................283

S. Healey and P. Jean, New Britannia Mine; and Guy Deschênes and M. Fulton, CANMET, MMSL

*Latest improvements to the leaching circuit at New Britannia Mine* ...........................................301

S. Tavani and R.E. Browner, Department of Minerals Engineering and Extractive Metallurgy, Curtin University; and R. Dunne, Newcrest Mining Ltd.

*Gold cyanidation rates in the presence of sulphide and lead ions* ......................................................309
Luciano Ramos, formerly Plant Manager, now Copper Projects Coordinator and Daniel Santos, formerly Mineral Processing Engineer, now Plant Manager, Companhia Vale do Rio Doce - CVRD

Improvements in Igarapé Bahia Gold Mine

Lenard Harris, Mining Industry Consultant; Deepak Malhotra, RDI; and R. (Jock) McGregor, Vista Gold

Recent development in processing of oxide and refractory gold ores

A. Macintosh and D. McArthur, Anglogold SA Metallurgical Technical Services; and R.M. Whyte, Anglo American Corporation

Process choices for carbon technology

Michael Drozd, Sales Engineer, CPL-Carbon Link

Cost savings associated with operating activated charcoal gold recovery systems

Steve Rule, AngloGold Ltd; José Roberto Vago, Plant Manager, Cerro Vanguardia S.A.; and Walter de Moura, AngloGold (Brazil)

Cyanide Recovery at Cerro Vanguardia

Malcolm Wills, General Manager, Boddington Gold Mine

Cost saving initiatives — Boddington Gold Mine

Frederick W. DeVries, Chem-Mining Consulting, Ltd.

The aftermath of Baia Mare: What can be salvaged?
