COMPUTATIONAL FLUID AND SOLID MECHANICS

Proceedings
First MIT Conference on Computational Fluid and Solid Mechanics
June 12–15, 2001

Editor:
K.J. Bathe
Massachusetts Institute of Technology,
Cambridge, MA, USA

VOLUME 1

2001

ELSEVIER

Contents Volume 1

Preface ................................................................. v
Session Organizers ..................................................... vi
Fellowship Awardees ................................................... vii
Sponsors .................................................................. ix

Plenary Papers

Aluru, N., Ye, W., Ramaswamy, D., Wang, X., White, J.,
Efficient simulation techniques for complicated micromachined devices ........................................... 2

Brezzi, F.,
Subgrid scales, augmented problems, and stabilizations ........................................................................... 8

Dreisbach, R.L., Cosner, R.R.,
Trends in the design analysis of aerospace vehicles ............................................................................ 11

Ingham, T.J.,
Issues in the seismic analysis of bridges ................................................................................................... 16

Lions, J.L.,
Virtual control algorithms ......................................................................................................................... 20

Makinouchi, A., Teodosiu, C.,
Numerical methods for prediction and evaluation of geometrical defects in sheet metal forming ............ 21

McQueen, D.M., Peskin, C.S., Zhu, L.,
The Immersed Boundary Method for incompressible fluid–structure interaction .................................. 26

Ottolini, R.M., Rohde, S.M.,
GMs journey to math: the virtual vehicle ................................................................................................. 31

Solids & Structures

Antony, S.J., Ghadiri, M.,
Shear resistance of granular media containing large inclusions: DEM simulations ........................................ 36

Araya, R., Le Tallec, P.,
Hierarchical a posteriori error estimates for heterogeneous incompressible elasticity ................................ 39

Augusti, G., Mariano, P.M., Stazi, F.L.,
Localization phenomena in randomly microcracked bodies ................................................................... 43

Austrell, P.-E., Olsson, A.K., Jönsson, M.,
A method to analyse the nonlinear dynamic behaviour of rubber components using standard FE codes .... 47

Bagar, Y., Hanksöter, U., Kintzel, O., Schwab, C.,
Simulation of large deformations in shell structures by the p-version of the finite element method .......... 50

Bardenhagen, S.G., Byutner, O., Bedrov, D., Smith, G.D.,
Simulation of frictional contact in three-dimensions using the Material Point Method .............................. 54
Bauhau, O.A., Bottasso, C.L.,
On the modeling of shells in multibody dynamics ........................................ 58
Baylot, J.T., Papados, P.P.,
Fragment impact pattern effect on momentum transferred to concrete targets ...... 61
Bécache, E., Joly, P., Scarella, G.,
A fictitious domain method for unilateral contact problems in non-destructive testing .................. 65
Belforte, G., Franco, W., Sorli, M.,
Time–frequency pneumatic transmission line analysis ...................................... 68
Böhm, F., Duda, A., Wille, R.,
On some relevant technical aspects of tire modelling in general ...................... 72
Borri, M., Bottasso, C.L., Trainelli, L.,
An index reduction method in non-holonomic system dynamics ..................... 74
Boucard, P.A.,
Application of the LATIN method to the calculation of response surfaces ....... 78
Brunet, M., Morestin, F., Walter, H.,
A unified failure approach for sheet-metals formability analysis .................... 82
Bull, J.W.,
Underground explosions: their effect on runway fatigue life and how to mitigate their effects ........ 85
Cacciola, P., Impollonia, N., Muscolino, G.,
Stochastic seismic analysis of R-FBI isolation system .................................. 88
Carter, J.P., Wang, C.X.,
Geometric softening in geotechnical problems ............................................. 91
Cen, S., Long, Y., Yao, Z.,
A new hybrid-enhanced displacement-based element for the analysis of laminated composite plates ...... 95
Chakraborty, S., Brown, D.A.,
Simulating static and dynamic lateral load testing of bridge foundations using nonlinear finite element models .......................................................... 99
Chapelle, D., Ferent, A.,
Asymptotic analysis of the coupled model shells-3D solids .......................... 104
Chapelle, D., Oliveira, D.L., Bucalem, M.L.,
Some experiments with the MITC9 element for Naghdi shell model ................. 107
Chen, X., Hisada, T.,
Frictional contact analysis of articular surfaces ........................................... 111
Choi, H.Y., Lee, S.H., Lee, J.H., Haug, E.,
Finite element modeling of human head–neck complex for crashworthiness simulation .................. 114
Chun, B.K., Jinn, J.T., Lee, J.K.,
A constitutive model associated with permanent softening under multiple bend–unbending cycles in sheet metal forming and springback analysis ........................................ 120
Crouch, R.S., Fernandez-Vega, J.,
Non-linear wave propagation in softening media through use of the scaled boundary finite element method .......................................................... 125
Czekanski, A., Meguid, S.A.,
Time integration for dynamic contact problems: generalized-α scheme ........... 128
Dai, L.,
Semi-analytical solution to a mechanical system with friction ....................... 132
Davi, G., Milazzo, A.,
A novel displacement variational boundary formulation ................................ 134
David, S.A., Rosário, J.M.,
Investigation about nonlinearities in a robot with elastic members ................ 137
De, S., Kim, J., Srinivasan, M.A.,
Virtual surgery simulation using a collocation-based method of finite spheres ........................................ 140
Deeks, A.J., Wolf, J.P.,
Efficient analysis of stress singularities using the scaled boundary finite-element method .......................... 142
Djoudi, M.S., Bahai, H.,
Relocation of natural frequencies using physical parameter modifications ................................................. 146
Duddeck, F.M.E.,
Fourier transformed boundary integral equations for transient problems of elasticity and thermo-elasticity .... 150
Dufour, F., Moresi, L., Mühlhaus, H.,
A fluid-like formulation for viscoelastic geological modeling stabilized for the elastic limit .......................... 153
Dvorkin, E.N., Demarco, D.,
An Eulerian formulation for modeling stationary finite strain elasto-plastic metal forming processes .......... 156
Dvorkin, E.N., Toscano, R.G.,
Effects of internal/external pressure on the global buckling of pipelines .................................................. 159
El-Abbasi, N., Bathe, K.J.,
On a new segment-to-segment contact algorithm ...................................................................................... 165
El-Abbasi, N., Meguid, S.A.,
Modeling 2D contact surfaces using cubic splines ..................................................................................... 168
Felippa, C.A.,
Optimal triangular membrane elements with drilling freedoms ..................................................................... 171
Fernández-García, J.R., Sofonea, M., Viñaño, J.M.,
Numerical analysis of a sliding viscoelastic contact problem with wear ....................................................... 173
Frangi, A., Novati, G., Springhetti, R., Rovizzi, M.,
Numerical friction mechanics in 3D by the symmetric boundary element method ..................................... 177
Galbraith, P.C., Thomas, D.N., Finn, M.J.,
Spring back of automotive assemblies ........................................................................................................ 180
Gambarotta, L., Massabò, R., Morbiducci, R.,
Constitutive and finite element modeling of human scalp skin for the simulation of cutaneous surgical procedures 184
Gebbeken, N., Greulich, S., Pietzsch, A., Landmann, F.,
Material modelling in the dynamic regime: a discussion ............................................................................ 186
Gendron, G., Fortin, M., Goulart, P.,
Error estimation and edge-based mesh adaptation for solid mechanics problems ....................................... 192
Gharai, E.S., McCartney, J.S., Frangopol, D.M.,
Reliability-based importance assessment of structural members ................................................................ 198
Ghioce, D.M., Mao, H.,
Probabilistic life prediction for mechanical components including HCF/LCF/creep interactions .................. 201
Giner, E., Fuenmayor, J., Besa, A., Tur, M.,
A discretization error estimator associated with the energy domain integral method in linear elastic fracture mechanics ............................................................................................................. 206
González, C., Llorca, J.,
Micromechanical analysis of two-phase materials including plasticity and damage ................................... 211
Goto, K., Yagawa, G., Miyamura, T.,
Accurate analysis of shell structures by a virtually meshless method ............................................................ 214
Guilkey, J.E., Weiss, J.A.,
An implicit time integration strategy for use with the material point method ........................................... 216
Gupta, S., Manohar, C.S.,
Computation of reliability of stochastic structural dynamic systems using stochastic FEM and adaptive importance sampling with non-Gaussian sampling functions ................................................................. 220
