Johannes Grotendorst (Editor)

Modern Methods and Algorithms of Quantum Chemistry

Winterschool, 21 - 25 February 2000
Forschungszentrum Jülich, Germany
Proceedings, Second Edition

organized by
John von Neumann Institute for Computing
in cooperation with
Arbeitsgemeinschaft für Theoretische Chemie

NIC Series Volume 3

ISBN 3-00-005834-6
CONTENTS

Industrial Challenges for Quantum Chemistry
Ansgar Schäfer
1 Introduction 1
2 Application Fields of Quantum Chemistry in Industry 2
3 Unsolved Problems 3
4 Conclusion 5

Ab Initio Treatment of Large Molecules
Reinhart Ahlrichs, Simon Elliott, and Uwe Huniar
1 Introduction 7
2 The Zoo of Methods 8
3 Computer Hardware: Another Zoo 14
4 Calculating some Large Systems 16
5 Outlook 23

Parallel Programming Models, Tools and Performance Analysis
Michael Gerndt
1 Introduction 27
2 Programming Models 30
3 Parallel Debugging 36
4 Performance Analysis 36
5 Summary 43

Basic Numerical Libraries for Parallel Systems
Inge Gutheil
1 Introduction 47
2 Data Distributions 48
3 User-Interfaces 51
4 Performance 54
5 Conclusions 62

Tools for Parallel Quantum Chemistry Software
Thomas Steinke
1 Introduction 67
2 Basic Tasks in Typical Quantum Chemical Calculations 68
3 Parallel Tools in Today’s Production Codes 70
4 The TCGMSG Library 71
5 The Global Array Toolkit 72
6 The Distributed Data Interface Used in GAMESS (US) 82
7 Further Reading 85
8 Summary 85

</table>
# Relativistic Electronic-Structure Calculations for Atoms and Molecules

*Markus Reiher and Bernd Hess*

1. Qualitative Description of Relativistic Effects 479
2. Fundamentals of Relativistic Quantum Chemistry 480
3. Numerical 4-Component Calculations for Atoms 481
4. Molecular Calculations 491
5. Epilogue 500

# Effective Core Potentials

*Michael Dolg*

1. Introduction 507
2. All-Electron Hamiltonian 512
3. Valence-Only Hamiltonian 515
4. Analytical Form of Pseudopotentials 521
5. Adjustment of Pseudopotentials 523
6. Core Polarization Potentials 527
7. Calibration Studies 528
8. A Few Hints for Practical Calculations 532

# Molecular Properties

*Jürgen Gauss*

1. Introduction 541
2. Molecular Properties as Analytical Derivatives 542
3. Magnetic Properties 559
4. Frequency-Dependent Properties 577
5. Summary 585

# Tensors in Electronic Structure Theory: Basic Concepts and Applications to Electron Correlation Models

*Martin Head-Gordon, Michael Lee, Paul Maslen, Troy van Voorhis, and Steven Gwaltney*

1. Introduction 593
2. Basic Tensor Concepts 595
3. Many-Electron Theory 603
4. Nonorthogonal Functions for Local Electron Correlation 610
5. An Overview of Other Applications 630
6. Conclusions 635
