Proceedings of the NINTH United States - Japan Conference on Composite Materials

Edited by
Hiroshi Fukuda, Science University of Tokyo
Takashi Ishikawa, National Aerospace Laboratory
Yasuo Kogo, Science University of Tokyo

July 3 and 4, 2000
Toray Human Resources Development Center,
Mishima, Shizuoka, Japan

Co-Organized by
The Japan Society for Composite Materials
The American Society for Composites

Sponsored by
Asian Office of Aerospace Research and Development / Air Force Office of Scientific Research(AOARD/AFOSR)
Army Research Office – Far East (AROFE)

In cooperation with
The Japan Society for Aeronautical and Space Sciences,
The Japan Society of Mechanical Engineers,
The Society of Materials Science, Japan,
The Japan Reinforced Plastics Society,
SAMPE Japan,
R&D Institute of Metals and Composites for Future Industries (RIMCOF),
Japan Institute for Metals,
Ceramic Society of Japan
# Table of Contents

*Preface* xi

**Plenary Session**  
*(Overview for Composites)*

Aerospace Force Research in Composite Materials ...................................................... 3  
R. L. Sierakowski  

Development of Carbon Fiber Industry - Past and Future ........................................ 15  
A. Takeo  

Status of Project on Advanced Composite Materials for Transportation in Japan ........ 23  
A. Sakamoto, M. Noda and Y. Yamaguchi

*(Low Cost Composite Structures)*

Rationale & Approaches for Low-Cost Aerospace Composite Products ........................ 29  
K. T. Kedward  

Low-Cost Fabrication of Advanced Polymeric Composites by Resin Infusion Process ... 31  
A. C. Loos

*(Composites for Infrastructure)*

Composites in Marine Structures ................................................................................. 39  
Y. D. S. Rajapakse  

Composites in the Renewal of Civil Infrastructure – Materials, Manufacturing, Design and Durability ......................................................................................... 41  
V. M. Karbhari  

Improvement of Shear and Ductility of Reinforced Concrete Columns by Wrapping of Continuous Fiber Reinforced Polymer Sheet ......................................................... 49  

*(Smart and Intelligent Composites)*

Manufactured Shapes of Piezoceramic-Composite Actuators ..................................... 57  
M. W. Hyer and A. B. Jilani  

Summary Report of Structural Health Monitoring Project for Smart Composite Structure Systems ........................................................................................................ 65  
N. Takeda  

Design of Intelligent Composite Structures ................................................................ 75  
F. -K. Chang  

Health Monitoring of Composite Structure Using Optical Fiber Sensors ................... 77  
C. S. Hong, C. Y. Ryu and J. W. Park
Low Cost Composite Structures, I

Design and Manufacturing Considerations in the Raytheon Premier I Business Jet .....87
R. Abbott (Invited)

Development Program and a Status of Advanced Composite Design and Manufacturing Technology for Future Supersonic Transport ........................................95
H. Tamura

Low Cost Manufacturing Approach for Composite Outer Wing of SST

Study on Processability, Composite Properties and Fiber Placement Processing for High Temp. Composites .................................................................105
Y. Yamaguchi, H. Mizuno, H. Horizono, Y. Sugiyama, Y. Ishimuro, K. Ishikiriyama and H. Tamura

Low Cost Composite Structures, II

Property Characterization in On-Line Consolidation of Thermoplastic Composites .....115
C. Kuo, S. I. Guceri and C. Pistor

A Study on the Induction Heating of Carbon Fiber Reinforced Thermoplastic Composites .................................................................117
H. J. Kim, S. Yarlagadda, J. W. Gillespie, Jr., N. Shevchencko and B. K. Fink

Needs for Predictable Damage Growth Design of Aircraft Composite Structures ........125
H. Kikukawa and H. Tamura

T. Ishikawa, M. Mastushima, E. Hara and G. Ben

Smart and Intelligent Composites

Delamination Monitoring of Graphite/epoxy Composites by Electric Resistance Change .................................................................143
A. Todoroki, Y. Tanaka, Y. Shimamura and H. Kobayashi

Internal Strain Measurement of FW FRP Pipe with Optical Fiber Sensors ..................151
T. Kosaka, K. Osaka, M. Sando and T. Fukuda

Strain Monitoring of IACC Yachts Using Fiber Optic Distributed Sensors ................159
H. Murayama, K. Kageyama, I. Kimpara, A. Shimada and H. Naruse

Effects of Pressure on Measurement of Strains in EFPI Optical Fiber Sensors Embedded in FRP Laminates ..................................................167
K. Osaka, T. Kosaka, Y. Kawasaki and T. Fukuda

Application of Embedded FBG Sensors for Detection of Damages in CFRP Composites 175
Y. Okabe, S. Yashiro, T. Kosaka and N. Takeda
MMC

Fracture Behavior and Its Influence on Superconducting Property of \( \text{Nb}_3\text{Al} \) Composite Wire

S. Ochiai, T. Sawada, M. Ohno, M. Hojo and K. Watanabe

Fabrication and Mechanical Properties of Titanium Metal Matrix Composite Rings

N. Yunoki, T. Honda, K. Moriya, S. Nishide and M. Uyama

Mechanical Properties of Aluminum Borate Whisker Reinforced AZ91D Magnesium Alloy Composites by Semi-Solid Process

M. Yoshida, S. Takeuchi, J. Pan, G. Sasaki, N. Fuyama, T. Fujii and H. Fukunaga

Effect of Whisker Surface Treatment on the Strength of \( \text{Al}_{18}\text{B}_4\text{O}_{33}/\text{Al} \) Alloy Composites

CMC & C/C

Multiple Micro-cracking and Tensile Behavior of Orthogonal 3-D Woven Si-Ti-C-O Fiber/Si-Ti-C-O Matrix Composite

T. Ogasawara, H. Ito, T. Ishikawa and N. Watanabe

Scanning Electron Microscopy Study of Failure in Glass-Sealed SiC • SiC-based Composite (NUSK-CMC) Creep Tested at 1100 and 1200 °C in Air

I. J. Davies, T. Ogasawara, T. Ishikawa, and N. Suzuki

Strength Improvement by Densification of C/C Composites

Suppression of Through-the-Thickness Cracking in SiC Coating Deposited on C/C Composites

T. Aoki, H. Hatta, T. Hitomi, H. Fukuda, and I. Shiota

Development of Glass Fiber Reinforced Carbon Composite

S. Somiya, and T. Nojiri

Fiber and Repair

A Back Stress Constitutive Model for High Temperature Deformation of SiC Monofilaments

C. E. Bakis, R. E. Tressler, and S. J. Strait

A Representative Diameter for the Evaluation of Brittle Monofilament Strength

T. Morimoto

Crack Growth Analysis in Cracked Aluminum Panels Repaired with a Bonded Composite Patch

Y. Shibuya, S. Fujimoto, M. Sato, H. Shirahata, H. Fukunaga, and H. Sekine

Experimental Study of Repair Efficiency for Single-Side Composite Patches Bonded to Aircraft Structural Panels

M. Sato, A. T. Yokobori, Jr., Y. Ozawa, T. Kamiyama, T. Miyagawa, P. R. W. Beaumont and H. Sekine
Fracture Toughness

Mode II Interlaminar Properties under Static and Fatigue Loadings for CF/Epoxy Laminates with Different Fiber Surface Treatment

M. Hojo, S. Matsuda, S. Ochiai, N. Tsujioka, Y. Nakanishi, Z. Maekawa, and A. Murakami

Page 291

Highly Accurate Mode-Separated Energy Release Rates for Delamination Cracks

H. -S. Oh

Page 299

Propagation Behavior of Mixed-Mode Delamination Fatigue Cracks in Graphite/Epoxy and Graphite/Thermoplastic Laminates

H. Tanaka and K. Tanaka

Page 307

Evaluating the Fracture Toughness of Glass Fiber/Epoxy Interface Using Slice Compression Test - Propagation Behavior of Interfacial Debonding

K. N. Tsay, K. Toge, and H. Kawada

Page 315

Interlaminar Fracture Toughness of Composite Laminates with Whisker Reinforced Interlamination

W. X. Wang, Y. Takao, T. Matsubara, and H. -S. Kim

Page 323

Delamination Growth Simulation of Composite Plates by Using Finite Element Method

Y. Shimamura, A. Todoroki, H. Kobayashi, and H. Nakamura

Page 331

New Concept Composites, I

Effects of Rolling on the Microstructure and the Mechanical Properties of Injection-Molded Sheets of PP/LCP Blend

M. Kawagoe, J. Qiu, W. Mizuno, and M. Morita

Page 341

Mechanical Properties of PE Fiber Reinforced Thermoplastics Composites

T. Fukui, and H. Hamada

Page 349

Effect of Thermal Cycling on Degradation of High-Temperature Polymer Composite Materials for the Next-Generation SST Structures

T. Shimokawa, H. Katoh, Y. Hamaguchi, S. Sanbongi, H. Mizuno, H. Nakamura, R. Asagumo, and H. Tamura

Page 355

Novel Carbon Fiber Reinforced Composites with Newly Developed Silicon Containing Polymer MSP

T. Ogasawara, T. Ishikawa, M. Itoh, T. Abe, R. Yokota, and M. Ando

Page 363

New Concept Composites, II

Flexural and Compressive Properties of Polymer Matrix Composites Containing a Mixture of Carbon and Silicon Carbide Fibers: Part 2 - Compression

I. J. Davies, H. Hamada, and M. Shibuya

Page 373

Development of Carbon Fiber Composites using Biodegradable Plastics and Their Mechanical Properties

J. Jiang, K. Okubo, and T. Fujii

Page 375

Energy Absorption Properties of Pultruded Rectangular Pipes

H. Saito, R. Inai, K. Kameo, and H. Hamada

Page 383
Composite Mechanics, I

Use of Glass Fibers in Tailoring Laminated Composites with Directionally Negative and Near-Zero Coefficients of Thermal Expansion ................................................................. 393
K. Wakashima, T. Suganuma, and T. Ito

Full-Field Singular Stresses in a Composite Laminate Weakened by a Cylindrical Cavity: Theory and Experiment ................................................................. 401
E. V. Ilarve, and D. H. Mollenhauer

Interaction of Shear Wave with Fiber Orientations in Composite Laminate: Model and Experiment ............................................................................................... 409
D. K. Hsu and D. Fei

Finite Element Analysis of Creep in Unidirectional Composites Based on Homogenization Theory ............................................................................................... 417
K. Kondo and R. Takiguchi

Correlation Between Acoustic Emission Waveform Parameters and the Damage and Failure Mechanisms in CFRP Materials ............................................ 425
O. Siron, H. Tsuda, and T. Hamada

Composite Mechanics, II

Characterization of Mechanical Behavior of CFRP Laminates Containing Matrix Cracks Using Damage Mechanics Analysis ................................................................. 435
S. Kobayashi, S. Ogihara, and N. Takeda

Bearing Failure Mechanisms of Carbon/Bismaleimide Composite in Mechanically Fastened Joints ............................................................................................... 443
Y. Xiao and I. Susuki

Mechanical Property Analysis of Matrix Hybrid Laminates .............................................................................................................................................. 451
T. Onita, T. Nishiwaki, and Z. Maekawa

Damage Tolerance

Damage and Failure in FRP Composite Laminates under Low-Velocity Impact ......................................................................................................................... 461
K. Minnaar, J. Zhai, S. W. Park, and M. Zhou

Damage Accumulation in Composite Laminates during Quasi-Static Transverse Loading .............................................................................................................. 469
Y. Aoki, H. Suemasu, and O. Majima

Damage Progression of Composite Laminates under Low-Velocity Impact ......................................................................................................................... 477

Impact Perforation of Orthotropic and Quasi-isotropic CFRP Laminates by a Steel Ball Projectile ............................................................................................... 485
H. Kasano

Damage Tolerant Behaviors of a Biomimetic CFRP Laminate .............................................................................................................................................. 493
T. Tanimoto

Composites for Infrastructure, I

The Application of Composites for the Rehabilitation of Concrete Bridge Infrastructure .............................................................................................................. 503
A. S. Crasto, R. Y. Kim, and J. P. Mistretta (Invited)
Composite Spoolable Tubulars .......................................................... 513
O. Ochoa (Invited)

Ductility of Reinforced Concrete Beams Externally Retrofitted with Carbon Fiber Polymer Composites ........................................ 521
S. E. Mouring, O. Barton, Jr., and D. K. Simmons

MMA Resin Application for the Continuous Fiber Retrofitting Method .......................................................... 529
M. Saito, and A. Kobayashi

Composites for Infrastructure, II

Behavior of Concrete Columns Confined with Hybrid Composite Materials .......................................................... 539
H. Toutanji and M. Saafi

Stress-Strain Behavior of Concrete Columns Confined with Advanced Fiber Composite Sheets ........................................... 547
H. Toutanji and Y. Deng

Durability of Steel Members Reinforced with FRP Sheets in Marine Environments .......................................................... 555
K. Yamaguchi, I. Kimpara, K. Kageyama, and M. Takanashi

Mechanical Characterization of Unidirectional CFRP Thin Strip and CFRP Cables under Quasi-Static and Dynamic Tension .......................................................... 563
H. Kimura, M. Itabashi, and K. Kawata

Creep and Fatigue

Time-Temperature Dependence of Fatigue Strength of Unidirectional CFRP .......................................................... 573
M. Nakada, Y. Miyano, and R. Muki

Fatigue of High Strength Fiber Caused by Repeated Axial Compression .......................................................... 581
Y. Yamashita, S. Kawabata, and A. Kido

Study on Creep Behavior of Glass Fiber Reinforced Polycarbonate .......................................................... 589
K. K. Biswas, M. Ikueda, and S. Somiya

Creep and Recovery of a Quasi-isotropic GFRP Laminate with Damage .......................................................... 597
K. Ogi and P. A. Smith

Bearing Creep Behavior of a Carbon/Bismaleimide Composite Material for the Next-Generation Supersonic Transport .......................................................... 603
H. Katoh, T. Shimokawa, H. Tsuda, A. Sakai, and R. Asagumo

Damage Identification

Effective Use of Fracture Surface of DCB Specimen for Better Understanding of Interphase .......................................................... 613
M. Maeda, Y. Ma, K. Inomata, K. Kitagawa, Y. Fujii, and H. Hamada

Damage Identification of Laminated Composite Structures Based on Dynamic Residual Forces .......................................................... 621
H. Fukunaga, M. Kameyama, and Y. Ogi
Damage Detection of CFRP Pipes and Shells by Using Localized Flexibility Method.................629
Y. Aoki and O-IL Byon

Damage Detection of CFRP Laminates Using Vibration Analysis Data...............................637
T. Inada, Y. Shimamura, A. Todoroki, H. Kobayashi, and H. Nakamura

Composite Structure and Tank

Development of High Speed Composite Flywheel Rotors for Energy Storage Systems..............647
K. Takahashi, S. Kitade, and H. Morita

Development of H-2A Launch Vehicle Composite Interstage Structure..............................655
M. Kobayashi, S. Sakai, and R. Shimizu

Postbuckled Behavior of Composite Isogrid Stiffened Shell Structure.............................661
T. D. Kim

Effect of Transverse Crack on Strength Degradation in Filament Wound Composites..............669
A. Horide, A. Tanaka, S. Wakayama, Y. Shigenari, K. Miyagawa, and S. Suzuki

Edge Effect on the Damage Development of CFRP..........................................................677
T. Yokozeki, Y. Hayashi, T. Ishikawa, and T. Aoki

Cryogenic Composite Tank

Applicability of CFRP Materials to the Cryogenic Propellant Tank for Reusable Launch Vehicles..........................................................687
Y. Morino, T. Shimoda, T. Morimoto, T. Ishikawa, and T. Aoki

Cryogenic Mechanical Properties of CF/Polymer Composites for Tanks of Reusable Rockets..........................................................697
T. Aoki, T. Ishikawa, H. Kumazawa, and Y. Morino

Influence of Mechanical and Thermal Loads on Propellant Leak of CFRP Laminates for Tanks of Reusable Rockets........................................705
H. Kumazawa, Y. Hayashi, T. Ishikawa, T. Aoki, and Y. Morino

Braided and FW Composites

Mechanical Properties of Braided Composites with Traditional Braided Structures...............715
M. Tada, T. Osada, K. Kameo, A. Nakai, N. Takeda, and H. Hamada

Bending Properties of Square Braided Composites with Middle-end-fibers..........................723
T. Ueda, H. Hamada, A. Nakai, and N. Takeda

Micro-fracture Behavior of Flat Braided Composites with a Circular Hole..........................729
T. Ohki, A. Nakai, H. Hamada, and N. Takeda

Analysis of Filament-Wound Sandwich Pipe under Internal Pressure..................................737
M. Xia, K. Kemmochi, and H. Takayanagi

Textile Composites

In-Plane Strength of 3-D Orthogonal Interlocked Fabric Composite..................................745
N. Watanabe and H. Mibayashi

Micro/Macro Analyses for Mechanical Properties of Textile Composites..........................753
A.Nakai, H.Hamada, and N.Takeda
Open Hole Compression Fatigue Test of Stitched CFRP Laminates .............................. 761
Y. Iwahori, T. Ishikawa and S. Murase

Delamination Toughness of New 3-D Orthogonal Interlocked Fabric Composite .......... 769
N. Watanabe and N. Nishii

Static and Dynamic Properties of Tri-axially Woven CFRP ........................................ 777
T. Ozawa and T. Ozaki

Poster Session

Bending Test for CFRP Skin/Foamed Core Sandwich Plates ........................................... 785
H. Fukuda, T. Kawasaki, A. Kataoka, and S. Tashiro

Effects of Stacking Sequences on Mechanically Fastened Joint Strength of Matrix Hybrid Laminates ................................................................. 793
H. Hamada and K. Sugimoto

Comparison and Discussion about Compression after Impact (CAI) Properties Obtained by Several Test Methods ................................................................. 801
E. Hara, T. Ishikawa, M. Matsushima, and G. Ben

Investigation of Fracture Mechanisms of Braided Pultrusion Composite Rods .......... 809
R. Inai, H. Saito, K. Kameo, T. Uozumi, M. Iwamoto, and H. Hamada

Structure and Mechanical Properties of Injection Molded CF/LCP Thin Plates .......... 817
A. Fujita, H. Ishida, E. Tanigaki, H. Hamada, and F. Baba

Fabrication and Mechanical properties of PP/PP Composites ........................................ 825
T. Kitayama, K. Ishikura, T. Fukul, and H. Hamada

Thermal Shock Induced Damage in Si-Ti-C-O Fiber Bonded Ceramics ....................... 831
Y. Kogo, M. Kamiya, H. Hatta, and T. Ishikawa

Design of Musical Instrument Material Substitutes Using FRP Structures .......... 839
T. Matsubara, T. Nishiwaki, and Z. Maekawa

Effects of Matrix Characteristics on Mechanical Properties in Knitted Composites ...... 847
A. Nakai, T. Osada, M. Inoda, N. Takeda, and H. Hamada

Effect of Pre-tensioned Fiber on Mechanical Properties of Plain Woven Glass Fabric Composite Materials ................................................................. 855
T. Ota, T. Matsuoka, and K. Sakaguchi

Eigenvalue Analysis Method for Honeycomb Sandwich Panels ................................. 863
T. Shiomi, T. Nishiwaki, and Z. Maekawa

Development for CAE Predicting Stiffness of SMC Structure - Research on the Young's Modulus in Rib Part ................................................................. 871
T. Katayama, M. Shinozawa, M. Hakotani, and M. Toutani

Elastoplastic Shear-lag Monte Carlo Simulation for the Single Fiber Composite Test ... 879
T. Okabe, and N. Takeda
