CONTENTS

EARTHQUAKE DAMAGES AND EARTHQUAKE GROUND MOTIONS
A Compass for Selecting Evaluation Methods for Design-Based Scenaria Earthquake
Input to Structures
  K. Ishida .................................................................................................................. 1
Report on Damage and Failure of Oil Storage Tanks Due to the 1999 Chi-Chi
Earthquake in Taiwan
  S. Yoshida, S. Zama, M. Yamada, K. Ishida, and
  T. Tahara .................................................................................................................. 11
Characteristics of Long-Period (2-20 sec) Strong Ground Motion and Sloshing
of Oil Storage Tanks Due to the 1999 Chi-Chi, Taiwan Earthquake
  R. Inoue, Y. Tajiri, S. Zama, K. Hatayama, and
  M. Endo .................................................................................................................. 21
Ground Motion Directivity Inferred From Minaret Damage During the 1999 Kocaeli
and Duzce, Turkey Earthquakes
  M. Motosaka and A. Somer ....................................................................................... 35
A Study on Earthquake Responses of Steel Tower With Additional Damping
  T. Mazda, H. Otsuka, H. Uchida, and S. Ikeda ....................................................... 43

INNOVATIVE ANTI-SEISMIC TECHNIQUES
Development of 3-Dimensional Base Isolation System With Coned Disk Spring
  T. Somaki, T. Nakatogawa, A. Miyamoto, K. Sugiyama, Y. Oyobe, and
  K. Tamachi ................................................................................................................ 49
Evaluation of Response of Three-Dimensional Base Isolation Based on Mechanical
Properties of Thick Rubber Bearings
  S. Yabana and A. Matsuda ........................................................................................ 57
Study on Seismic Mounting With Rolling and Sliding Contact at Taper Contact Surface
  M. Muneyasu, K. Ishii, and T. Koizumi ................................................................... 65
Study on Motion Analysis of Pendulum Isolation Systems During Earthquakes
(Dynamic Test on a 3-Storey Steel Frame Model Supported by 4 Friction Pendulum
Bearings)
  S. Okamura, S. Fujita, K. Hayakawa, H. Funaki, M. Ikenaga, and
  T. Aramizu ............................................................................................................... 71
A Design Procedure for Isolated Structures With High Damping Rubber Bearings
  C. S. Tsai, B.-J. Chen, T.-C. Chiang, and C.-J. Li ................................................... 79
A Feasibility Study of an Application of Damping System for Interconnected Structures
to APWR Nuclear Power Plant Buildings
  T. Kawasato, J. Yamada, S. Ikutama, M. Kageyama, Y. Takeuchi, M. Endo,
  and S. Takami ......................................................................................................... 87

CONTROL WITH ACTIVE AND PASSIVE DAMPING
Experimental Investigation on Steel Structures Equipped With Fluid Viscous Damper
  C. S. Tsai, C.-L. Ho, C.-W. Chang, and K.-C. Chen ................................................. 95
Experimental Study on Ball Screw Type Magnetic Friction Damper: Semiactive
Control Using Electromagnet
  T. Watanabe, K. Suzuki, F. Iiyama, and
  H. Sodeyama ........................................................................................................... 103
Development of Large Capacity Semi-Active Vibration Control Device Using
Magneto Rheological Fluid
  H. Sodeyama, K. Sunakoda, K. Suzuki, J. D. Carlson, and
  B. F. Spencer, Jr ....................................................................................................... 109
A Basic Study on Dynamic Characteristics of MR Dampers
  H. Sodeyama, K. Sunakoda, K. Suzuki, J. D. Carlson, and
  B. F. Spencer, Jr ....................................................................................................... 115
