# TABLE OF CONTENTS

## IMAGE PROCESSING I

Modeling and Simulation of Random Vector Fields with Specified Divergence and Curl .......................... 1  
Z. Han and T.S. Denney, Jr.

A Wavelet-Based Time-Varying POCS Algorithm for Image Interpolation by ........................................ 6  
V. DeBrunner, M. Yao, and L.S. DeBrunner

A Filter Design Method for Minimizing Blur in a Region of Interest in Low-Resolution MRI Images .................. 11  
T. Bakir and S.J. Reeves

Optimal Brightness Pattern Design for Estimating Small Deformation of the Human Heart 
Using Magnetic Resonance Cardiac Tagging ............................................................. 16  

## CONTROL THEORY

Variable Structure Controller VS. Feedback Linearization in Some Nonlinear Control Systems ................................ 21  
A. Davari

Optimal Discrete/Continuous Control with LQR Performance Criterion And "Exponential-In-Time" Intersample Control Variations ............................................................... 25  
M. Abdel-Haleem and C.D. Johnson

Alternative Design Methods for Linear Subspace-Stabilizing Control Laws; Part 1, The Linear-Quadratic Optimal Control Method ................................................................. 30  
C.D. Johnson

Alternative Design Methods for Linear Subspace-Stabilizing Control Laws; Part 2, The Algebraic Method in Canonical Variables ................................................................. 34  
C.D. Johnson

## GENERAL SYSTEMS I

An Optical Chopper Using Sliding Control .................................................................................. 36  
S.D. Goodman, J. Witmer, and T. Brown

Modelling of Seated Human Body Response to Low Frequency Vibrations ....................................... 41  
G. Song, W.N. Patten, X. Wu, Y. Liu, and R.P. Leland

Applied Modeling and Simulation of Underground Storage Tank Volumetric Leak Detection .................. 46  
J. Ibiet, J. Istre, and F. Chowdhury

Fourier Transform Profilometry as a Concrete Scabbling Monitor ...................................................... 51  
M.E. Henderson, R.D. Costley, and R.L. King

## COMMUNICATIONS

Generalized Fisher's Test for Narrow Band Jamming Suppression in Wavelet Packet Modulated Direct Sequence Spread Spectrum System ....................................................... 56  
Y. Zhang, J.C. Dill, J. Connor, and L. Snyder

Paraunitary Factorization of Shuffled Linear-Phase Subband Coders ..................................................... 61  
O. Alkin and J.W. Phegley

Intelligent Network Manager for Distributed Multimedia Conferencing .............................................. 65  
M. Celenk and M. Al-Jarrah

New Architectures for Telecommunication Systems ............................................................................. 70  
P. Lorenz
IMAGE PROCESSING II

Automatic Boundary Detection in Color Images .................................................. 75
M. Celenk and M. Uigt de Haag

On the Use of Bispectrum and Melin Transform for Translation and Scaling Invariant
Feature Extraction for One-dimensional Patterns .................................................. 80
M. Celenk and Y. Shao

A Heuristic Quadtree Partitioning Algorithm for Fractal Image Compression ............. 84
W.H. Mahmoud and D.J. Jackson

Application of Head-Related Transfer Functions to MPEG Audio Signals ............... 89
C.A. Lanciani and R.W. Schafer

COMPUTER SYSTEMS

Techniques to Enhance the Performance of Dynamically Reconfigurable FPGA- based Systems .................. 94
R.V. Venugopal and R.L. Haggard

M. Chandran and R.L. Haggard

The Design of Dynamically Reconfigurable Computers ........................................ 104
Y.S. Lee and R.L. Haggard

GPS-Based Instrumentation for Computing Systems ............................................. 109
J.C. Harden and W.C. Francis

CONTROL SYSTEMS I

A Study of Several Types of Singularities of a Robotic Manipulator ...................... 114
S. Bono and R.G. Roberts

Robotic Manipulator Arm Control Using Adaptive Fuzzy Logic Controller Gain
Scheduling PID ........................................................................................................ 118
E.M.R. Hamed, M. Hentea, and M.I. Kamel

Control Issues in the Design of a Tower Clim bot ............................................. 123
V.V. Diwanji and J.N. Anderson

Fuzzy Logic Control of a Crane System to Reduce the Load Sw ......................... 128
D. Fugate and A.T. Alouni

POWER SYSTEM ANALYSIS

Off-Nominal High Frequency Protection for Dispersed Storage and Generation (DSG)
Systems .................................................................................................................. 133
D.R. Brown and D.B. Dunn

Nonlinear Control Application to Enhance Fault Clearing Time in Power Systems ........ 138
M. Poshtan, P. Rastgoufard, and M. Wu

Power System Fault Detection Using Artificial Neural Network ......................... 143
A. Chandrasekaran and T. Srinivasan

Application of Wavelet Transform in Power System Analysis .............................. 147
T. Zheng and E.B. Makram

NEURAL NETWORKS AND FUZZY SYSTEMS

A Neural Network for Computer Access Security ................................................. 152
H.M. El-Boghdadi and M. Abdelrahman

Applying Monte Carlo Methods to Neural Network Development ......................... 156
J.L. Frolik
Time Lagged Recurrent Neural Networks for Input Output Modeling ............................................. 159
E.G. Lobo and F.N. Chowdhury
An Improved Method for Generating Fuzzy Rules from Data ......................................................... 164
J. Branson and J.H. Lilly

CONTROL SYSTEMS II

Variable Structure PID Control to Prevent Integrator Windup ......................................................... 169
C.E. Hall, A.S. Hodel, and J.Y. Hung
Design of Bumpless Discrete-Time Control Systems Using Discrete/Continuous Control Theory ................................................................. 174
C.D. Johnson

POWER SYSTEM COMPONENTS

Design Considerations in High-Power Three-Phase Inverters ......................................................... 181
E.M. Hill, T.A. Haskew, and H. Bryan Owings
Reactive Compensator Modeling in EMTP ...................................................................................... 186
A. Maitra and S.M. Halpin
Analysis and Simulation of a DC Motor Drive .................................................................................... 191
J. Zhang and E.B. Makram
Steady State Performance of Three-Wire Polyphase Induction Machines Operating from Unbalanced Nonsinusoidal Sources ...................................................... 195
T. Judson and C.A. Gross

ELECTROMAGNETICS

Measuring the Microwave Attenuation in Microstrip ................................................................. 200
S.M. Wentworth
Simulating Measurement Noise Effect in Parameter Identification of Ferromagnetic and Antiferromagnetic Systems ................................................................. 205
J. Kim, M. Sun, and H. Fujiwara
Position Location using an RFID-GPS System in an Indoor Environment ...................................... 210
D.B. Dunn and D.R. Brown

POWER SYSTEM STABILITY AND SECURITY

Application of Feedback Linearization Control to Small Scale Power System Stability Analysis ................................................................. 213
M. Wu, P. Rastgoufard, and M. Poshtan
Improvement of Transient Stability Using a Thyristor Controlled Series Compensator ................. 218
G. Radman and B. Mirafzal
Voltage Collapse Prevention in Power Systems via Series Compensation ........................................ 222
J. Hou and Y.D. Song
Graphical User Interface for Power Systems Software ................................................................. 227
S.C. Schruff and S.M. Halpin

ENGINEERING EDUCATION

Radio Assembly and Testing as a Junior Level Laboratory ............................................................ 232
S.M. Wentworth and B. Singh
What's Missing in our Modern Engineering Circuit Analysis Courses ............................................ 235
F.O. Simons, Jr., R.C. Harden, and A.L. Robinson
On-Campus Effects of Distance Education: An Assessment of the Power Engineering Classroom .................................................. 241
R.F. Halpin and S.M. Halpin

Modified Stepping Algorithm for Time Domain Solutions of Networks .................................................. 246
T. Gurrieri and S. Natarajan

MECHANICAL SYSTEMS

A Novel Design for a High-Resolution Tactile Sensor .................................................. 251
E.G. Munday

The Effect of Mean Stress Components in High-Cycle, Biaxial Fatigue .................................................. 256
E.G. Munday

Inferential Sensors for Cupola Iron-Melting Furnaces .................................................. 261
M. Abdelrahman and S. Subramanian

Rule Base Filtering and Trend-Estimation for Meltrate Calculation of A Cupola Furnace .................................................. 266
M.A. Abdelrahman and S.K. Subramanian

SYSTEM IDENTIFICATION

Identification of Distributed Parameter Systems with Undetected Parameter Zones .................................................. 271
M. Sun and C. Zheng

Identification of Linear Dynamical Systems in the Presence of Time-Varying Inputs .................................................. 276
Y-J. Lee and C.D. Johnson

The Iterative Identification and Control Algorithm for Discrete-time Linear Systems with Unknown Dynamics .................................................. 280
C. Aissi and F. Chowdhury

On the Monotone-Increasing Value of the Determinant of a Continued-Sum of Dyadic Products Arising in System-Identification .................................................. 284
R.W. Bass and C.D. Johnson

Using Flexlab for Validation of System Identification Methods .................................................. *
T.M. Adami and R.D. Irwin

RADAR SIGNAL PROCESSING AND TRACKING

A Review of Grating Lobe Mechanisms and Suppression Techniques in Gapped Waveforms .................................................. 285
B.M. Keel and J.A. Saffold

Unique Features of Subspace Processing for Adaptive Radar in Inhomogeneous Environments .................................................. 290
W.L. Melvin

Filter Settling for Radar Tracking with LFM Waveforms .................................................. 295
W.D. Blair and D. Hahs

NNJPDA for Possibly Merged Monopulse Measurements .................................................. 300
W.D. Blair

GENERAL SYSTEMS II

A Log-Likelihood Gradient for Continuous Time Stochastic Distributed Parameter Systems .................................................. 305
R.P. Leland

A Finite Element Time Domain Method Using Wavelet-Like Basis .................................................. 310
W.E. Hutchcraft, R.K. Gordon, and J-F. Lee

Approximating the Phase-Error Density Function in the Non-Linear PLL .................................................. 315
J. Stensby

Stability and Rationalization of Singularly Perturbed Systems with Time Delay by Unified Approach Using Delta Operators .................................................. 320
K-H. Shim and M.E. Sawan

*Not Available at Time of Publication
POWER DISTRIBUTION SYSTEMS

A User Interface for a Power Quality Measurement System .................................................. 325
S. Sankaran and S.M. Halpin

Distribution Transformer Modeling for Unbalanced Multiphase Power System Analysis ........ 330
A.E. Card and S.M. Halpin

Study of Micro-Turbine Generators and Their Application in Distribution Systems .......... 335
A. Bhowmik and S.M. Halpin

Distribution System Planning Issues in a Changing Regulatory Environment .................. 340
A.P. Hanson

Implementation of Distribution Automation at Alabama Power Company ......................... 342
G.L. Clark

CONTROL SYSTEM APPLICATIONS

Collision Course Terminal Guidance Using Subspace Stabilization .................................. 347
C. Tournes

Aircraft Dual Longitudinal Control Using Subspace-Stabilization .................................. 352
C. Tournes

Application of Subspace Stabilization to the Control of Turbojet Engines ....................... 357
C. Tournes

Control System Modeling in the EASY/ROCETS Environment ....................................... 362
C.Y. Lim and R.F. Follett
