CONTENTS

VOLUME 1

AEROSPACE POWER SYSTEMS AND TECHNOLOGIES

Analysis and Simulation
Spacecraft Power Systems Studies Using PSpice
W. Billerbeck and Gilbert Lewis Jr. .......................................................... 1
A Novel Approach to Simulate Power Electronic System by Embedding MATLAB
Objects into Saber
Zhenhua Jiang and Roger Dougal .................................................................. 19
Simulation and Analysis of a Three-Phase Auxiliary Resonant Commutated Pole
Inverter for an Induction Motor Drive
Qinghong Yu and R. M. Nelms ....................................................................... 23
Integrated Electro-Hydraulic System Modeling and Analysis
S. Johnny Fu, Mark Liffring, and
Ishaque S. Mehdi .......................................................................................... 29
Simulation of Flywheel Energy Storage System Controls
Long V. Truong, Frederick J. Wolff, and
Narayan V. Dravid ........................................................................................ 33
The Elements of Motive Thermodynamics of Light For New Solar Engineering
System
Anatoly Sukhodolsky ...................................................................................... 39

Aerospace Batteries
Update on Development of 5.5 inch Diameter Nickel-Hydrogen Battery Cells
Jack N. Brill, Fred L. Sill, and Matthew J. Mahan ............................................ 49
Updated Life Cycle Test Results for Flight Qualified Nickel-Hydrogen Cell Designs
Ron Smith and Jack Brill ................................................................................ 55
Lithium-Ion Polymer Batteries for Space Systems
Oliver Gross, Chris Fox, David P. Roller, and
Les Shimanek .................................................................................................. 61

Concentrator Solar Arrays
Flight Test of a Solar Array Concentrator on Mightysat II.1
Theodore G. Stern and Patrick Bonebright ...................................................... 69
“Solarcon” Concentrator Solar Array
Michael A. Brown and James Moore .............................................................. 75
The Stretched Lens Array (SLA), An Ultralight Concentrator for Space Power
Mark J. O’Neill, Michael F. Piszczor, Michael I. Eskenazi, A. J. McDanal,
Patrick J. George, Matthew M. Botke, Henry W. Brandhorst, David L. Edwards,
and Paul A. Jaster .......................................................................................... 79

Fuel Cells for Aerospace
Energy Storage for Aerospace Applications
Maria E. Perez-Davis, Lisa L. Kohout, Patricia L. Loyselle, Michelle A. Manzo,
Kenneth A. Burke, Mark A. Hoberecht, and
Carlos R. Cabrera .......................................................................................... 85

Flywheel Energy Storage Systems
Advanced Motor Control Test Facility for NASA GRC Flywheel Energy Storage
System Technology Development Unit
Barbara H. Kenny, Peter E. Kascak, Heath Hofmann, Michael Mackin,
Walter Santiago, and Ralph Jansen ................................................................ 91
Magnetic Suspensions for Flywheel Batteries  
Alan Palazzolo, Yeonkyu Kim, Andrew Kenny, Uhn Joo Na, Shuliang Lei,  
Erwin Thomas, Raymond Beach, Albert Kascak, and  
Gerald Montague ................................................................. 97

Aerospace Flywheel Technology Development for IPACS Applications  
Kerry L. McLallin, Jerry Fausz, Ralph H. Jansen, and  
Robert D. Bauer ................................................................. 105

Novel Actuator for Magnetic Suspensions of Flywheel Batteries  
Andrew Kenny, Andrew Provenza, Uhn Joo Na, Alan Palazzolo, Raymond Beach,  
Albert Kascak, Gerald Montague, Yeonkyu Kim, and  
Shuliang Lei ................................................................. 111

Review of OES Flywheel Energy Storage Development for Space Power  
Dwight W. Swett and John G. Blanche IV ........................................ 119

A Passive Magnetic Bearing Flywheel  
Mark Siebert, Ben Ebihara, Ralph Jansen, Robert L. Fusaro, Albert Kascak, and  
Andrew Kenny ................................................................. 125

Nuclear/Radioisotope Power Systems  
Advanced Radioisotope Power System Technology Development for NASA Missions 2011 and Beyond  
Jack F. Mondt .............................................................................. 133

Power Electronics  
Stress Analysis of DC-DC Power Converters  
Siamak Abedinpour and Krishna Shenai ............................................. 141

A Survey of Power Electronics Applications in Aerospace Technologies  
M. David Kankam and Malik E. Elbuluk ........................................... 147

Designing Electronic Power Converters for Space Applications  
Biswajit Ray ............................................................................. 155

Low Temperature Performance of High Power Density DC/DC Converter Modules  
Malik E. Elbuluk, Scott Gerber, Ahmad Hammoud, Richard L. Patterson, and  
Eric Overton ................................................................. 161

Low Temperature Testing of a Radiation Hardened CMOS 8-Bit Flash Analog-To-Digital (A/D) Converter  
Scott S. Gerber, Ahmad Hammoud, Richard L. Patterson, Eric Overton, Malik E. Elbuluk, Reza Ghaifarian, Rajeshuni Ramesham, and  
Shri G. Agarwal ......................................................................... 167

A Low-Cost Driver for Piezoceramic Flight Control Surfaces  
William Dillard and R. M. Nelms ................................................... 175

Power Management and Distribution  
A Comparison of DC-DC Converter Topologies for High Voltage SSP Systems  
William Dillard, Qinghong Yu, and  
R. M. Nelms ........................................................................... 181

Design and Implementation of a Digital PID Controller for a Buck Converter  
Liping Guo, John Y. Hung, and R. M. Nelms ..................................... 187

Intelligent Systems for Power Management and Distribution  
Robert M. Button ....................................................................... 193

Using Half-Bridge Topologies as Power Electronic Building Blocks (PEBBS)  
Martin Beck, D. Kent Decker, and Frederick J. Wolff ....................... 199

Nonlinear Digital Control Implementation for a DC-to-DC Power Converter  
Jack Zeller, Minshao Zhu, Tom Stimac, and  
Zhiqiang Gao ........................................................................ 205

Large-Signal Analysis of the Peak-Power-Tracking System  
Yoon-Jay Cho and B. H. Cho ..................................................... 211

Global Characteristics of Hydrogen-Hydrocarbon Composite Fuel Turbulent Jet Flames
Ahsan R. Choudhuri and S. R. Gollahalli ................................................................. 313

A CFD Study of the Effects of Inlet Droplet Variables on Water Mist Fire Suppression Efficiency
K. C. Adiga ........................................................................................................ 325

Use of CFD Modeling in Assessing Explosion Consequences in Petrochem and Power Production Facilities
J. Keith Clutter ....................................................................................................... 331

Control of Kerosene Spray Flame Characteristics From a Swirl Burner
B. Habibzadeh and A. K. Gupta ....................................................................................... 341

Wireless Energy Transfer/Space Solar Power Systems
Comparison of Space Solar Power Systems and Terrestrial Solar Arrays
Finley R. Shapiro ................................................................................................................... 349

Effects of Hypervelocity Impact on Solar Cell Modules at High Voltage
Henry W. Brandhorst Jr. and Stevie R. Best ................................................................. 353

CONVERSION TECHNOLOGIES
Advanced Cycles
Recent Innovative Systems: Analogies and Differences From a Thermodynamic Point of View
Giacomo Bisio and Giuseppe Rubatto ............................................................................. 359

First Experimental Results on Humidification of Pressurized Air in Evaporative Power Cycles
Farnosh Dalili and Mats Westermark ................................................................................ 365

Advanced Energy Conversion Technologies Based Small Power Systems for Remote Site Applications
Mysore Ramalingam, Edward Doyle, Kailash Shukla, and Brian Donovan .................... 373

Development of Chemically Recuperated Micro Gas Turbine
Takao Nakagaki, Takashi Ogawa, Haruhiko Hirata, Koichi Kawamoto, Yukio Ohashi, and Kotaro Tanaka ................................................................. 379

Prediction of Performance of Simple Combined Gas/Steam Cycle and Co-Generation Plants With Different Means of Cooling
Sanjay Yadav, Onkar Singh, and B. N. Prasad ............................................................... 385

Test and Demonstration Results of a New Magnetically Coupled Adjustable Speed Drive
Kenneth J. Anderson, Ron Woodard, and Alan Wallace ............................................... 391

I/V Characteristic of ZnSe Schottky Diodes
Dirk M. Chiu ......................................................................................................................... 395

The Electric Air Arc is an MHD Generator
Neal Graneau, Peter Graneau, and George Hathaway ....................................................... 401

Stirling
Some Results of Preliminary Bench Tests on a 3-kWe Stirling Engine Based Co-Generation Unit
K. Makhkamov, V. Trukhov, I. Tursunbaev, E. Orda, A. Lejobokov, B. Orunov, A. Korobkov, I. Makhkamova, and D. B. Ingham ......................................................... 405

Determination of the Temperature Distribution in a Combustion Chamber for a Stirling Engine
K. Makhkamov, D. B. Ingham, and M. Pourkashanian ...................................................... 411
RENEWABLE ENERGY SYSTEMS
Phovoltaic Systems
Nighttime and Daytime Electrical Power Production From the Nighttime Solar Cell
Ronald J. Parise and G. F. Jones

Hybrid PV/Fuel Cell System Design and Simulation
Thanaa F. Al-Shater, Mona N. Eskander, and Mohsen T. El-Hagry

Solar Thermal Energy Conversion
Yuji Ando and Tadayoshi Tanaka

Conversion of Solar Thermal Energy: Practical Enhancements and Environmental Consequences
Ted E. Larsen and E. Kenneth May

Cooling Power Enhancement of CPC (Compound Parabolic Concentrator) Sky Radiator
Takeo S. Saitoh and Koichi Tatsuo

A Numerical Heat Transfer Study for a Storage Tank of a Heat-Pipe Solar Hot Water System
Ru Yang and Zhi-Hao Yang

Recent Progress in Heat-Pipe Solar Receivers
James B. Moreno, Marcos A. Modesto-Beato, Charles E. Andraka, Steven K. Showalter, Scott Rawlinson, Timothy A. Moss, Mark Mehos, and Vladimir Baturkin

Hydrogen and Biomass Energy
Hydrogen From Solar Energy: An Overview of Theory and Current Technological Status
Paul A. Erickson and D. Yogi Goswami

On-Board Hydrogen Storage for Fuel Cell Vehicle
Thomas Vernersson, Kristina Johansson, and Per Alvfors

Premixed Combustion of Hydrogen/Methane Mixtures in a Porous Medium Burner
Chung-jen Tseng

Biomass Briquetting Technology With Preheating
Sk Ahad Ali, Md Nawsher Ali Moral, and S. C. Bhattacharya

Experimental Study of Combustion Characteristics in a Rice Husk Fired Vortex Combustor
Pongjet Promvonge and Kulthorn Silapabanleng

Wind and Hydro Systems
Wind Farm Sizing and Cost-Screening
Mukund R. Patel

Assessing Potential Wind Turbine Sites Using Computational Fluid Dynamics
Marc P. LeBlanc, Gordon D. Stubley, and George A. Davidson

Hierarchical Technique for Hydropower Plants at the New Valley of Egypt and Toshka Area
Faten H. Fahmy

A Multilevel Stochastic and Optimization Approach of Clean Energy Plants Chain Operation
Faten H. Fahmy

Technologies for Solar Energy Conversion
Full-Spectrum Solar Energy Systems for Use in Commercial Buildings
Jeff D. Muhs and D. Duncan Earl
A Study of Semi-Transparent Cylindrical Radiation Shields
Sophie Guers, Marta Slanik, David A. Scott, and B. Rabi Baliga

Modeling and Performance Comparison of an Internally Cooled Liquid Desiccant Absorber Operating in Several Hybrid Cooling and Dehumidification Modes
Arshad Y. Khan

VOLUME 2

ENERGY SYSTEMS

Building Energy Systems

Pre-Emptive Performance Contracting for Improved Building Energy Efficiency
Manohar R. Kulkarni

Program Overview: The Texas LoanSTAR Program, 1989–2000

A Program Update
W. Dan Turner, David E. Claridge, Dennis L. O’Neal, Jeff S. Haberl, Warren M. Heffington, Dub E. Taylor, and Theresa Sifuentes

Update on Rebuild Texas (Formerly Known as the Brazos Valley Energy Conservation Coalition)
Jeff Haberl, Bahman Yazdani, Charles Culp, Dan Turner, David Claridge, and Mike Myers

Energy Conservation Through Continuous Commissioning
Guanghua Wei, Song Deng, David E. Claridge, and W. Dan Turner

Facility Energy Savings Achieved Through Voluntary Conservation
G. Loren Toole and Russell P. Muschick

Commercial HVAC and Water-Heating Equipment Minimum Efficiency Standards in the United States
Cyrus H. Nasseri and Sriram Somasundaram

Thermal and Mechanical Energy Storage

Evaluation and Improvement of Eddy Current Position Sensors in Magnetically Suspended Flywheel Systems
Timothy P. Dever, Alan B. Palazzolo, Erwin M. Thomas III, and Ralph H. Jansen

Storage and Transport of Cold Using Clathrate Hydrate Slurries: Fundamental Thermophysical Characteristics of Aqueous Solution of TBAB
Ichiro Tanasawa and Shingo Takao

Heat Balance of Long-Term Supercooled Thermal Energy Storage
Satoshi Hirano and Takeo S. Saihoh

Air Conditioning Systems

Fault Detection in a Multistage Flash Desalination Plant Using the Parity Space Approach
Souvik Bhattacharyya, A. Patra, and M. Mishra

Identification and Analysis of Psychometric Methods for Enhancing Air Conditioner Efficiency and Capacity
Matthew Grant, Frank Wicks, and Richard Wilk

Compressor Power Modeling: Part I — Thermodynamic Efficiency Determination From Manufacturer’s Performance Curves
Manohar R. Kulkarni

Compressor Power Modeling: Part II — Experimentally Validated New Compressor-Energy-Efficiency-Factor (CEEF) for Improved Power Prediction
Manohar R. Kulkarni
