Table of Contents – Volume 2

Recycling

Recycling problems in the metallurgy of non-ferrous metals 3
J. Karwan-Baczeswka, T. Karwan, A. Bednarek, L. Szkutnik

Romelt process – new technology for industrial wastes recycling 25
Yury Pokhvisnev, Vladimir Romenets, Valery Valavin, Semen Vandariev, Alexander Zaytsev

Secondary lead smelting at the beginning of the 21st century 41
Andreas Siegmund

Recycling of zinc bearing residues with the PRIMUS®-process 57
Thomas Hansmann, Romain Frieden, Jean Luc Roth

Recovery of germanium from fly ash – waste from coal combustion 69
Jitka Jandová, Tatána Štefanová, Hong Vu

The potential of AAC systems for secondary metals recovery – a review 77
Faustino L. Prado, Faustino G. Prado, Martin Vandebriel

Removal of PCBs from electrical equipment by vacuum thermal recycling 91
Hiroshi Ohbayashi, Masaaki Hosomi, Satoshi Saitoh, Hiromi Kanbe, Albrecht Melber

Development of continuous agitating vacuum distillation process (CAVP) by using water model simulation 103
Kensuke Mori, Mitsuhiro Ohtaki, Tetsuozo Arakawa, Takayasu Kisaragi, Fujio Murata

Water model experiment of fluid flow in continuous agitating vacuum distillation process 113
Kimihisa Ito, Takeshi Yamanaka, Takaaki Ishikawa, Kensuke Mori, Mitsuhiro Ohtaki

Improved aluminium recovery at recycling plants by integrated slag refining 121
Bernd Friedrich, M. Gerke, Joachim Krüger, Alexander Arnold

Proposal of new fractional crystallisation process for refining of molten aluminium scrap 141
Takayuki Sotome, Mitsuhiro Ohtaki, Fuminori Chiba, Mitsuo Tokunoh

Auszmel technology for recycling of computer boards and other high value materials 151
Robert W. Masurewicz, B. Ross Baldock, John S. Robert

Optimization of metal recycling from batteries 165
Jörg Wochele, Christian Ludwig, Albert J. Schuler, Andreas Krebs

Vacuum-thermal recycling of used nickel-cadmium batteries 175
Reiner Weyhe, Bernd Friedrich

Metal Processing

Heat recovery & environment technology in non-ferrous metallurgy 189
Olaf Piehl

Customized copper melting and pouring furnace plants adapted to metallurgical requirements 201
Wilhelm Schmitz, G. Frings, F. Donsbach, Heinrich Schliefer

Production of oxygen-free copper at Norddeutsche Affinerie 215
André Matthia, Heinrich Schliefer

Proceedings of EMC 2001
Continuous casting of copper, new concepts and developments
Wolfheinrich Müller

N₂-nitrogen on-site generation for metal furnace atmospheres
Guido Plicht, Michael Bonhagen, Gary Brown, Harald Schillak

High convection roller hearth furnaces for the final annealing of copper tubes
Willi Johnen

Characteristics of repetitively dent-structured material
Frank Mirtsch, Schokufeh Mirtsch, Martin Schade

Metals and the environment – challenge and chance
Marianne Schönnenbeck, Matthias Simon

Raw Materials Aspects

Non-sulphide base metal resources in Europe – a geological overview
Duncan Large

Loesche vertical roller mills for mineral processing
Heinz-Ulrich Schäfer

Bio-oxidation of concentrates using airlift-loop reactor technology
Cees J.N. Buisman, Carl E. Schultz, Mike K. Rhodes, Petrus J. van Staden

Application of advanced granulation technology (abridged version)
Robert G. Goffin

The Boehmite process – an innovative variation of the Bayer process
Dimitris Panias, Ioannis Paspaliaris, C. Skoufakis

New developments in CFB-alumina calcination technology
Hans-Werner Schmidt

Consumption and use of copper and copper alloys – Actual situation and future challenges
Achim Walter Baukloh

New European legislation and standards on safety of machinery
Winfried Resch

Energy market development and the impact on non ferrous metal production
Kurt Kugeler, Zeynal Alkan, Olaf Kugeler

Metal waste and legal problems
Walter Frenz

The European BAT initiative from the view of a secondary copper smelter
Claus Meyer-Wulf
